

Module Handbook Information Systems M.Sc.

SPO 2019 Winter term 2019/20 Date: 02.10.2019

KIT DEPARTMENT OF ECONOMICS AND MANAGEMENT / KIT DEPARTMENT OF INFORMATICS

KIT - The Research University in the Helmholtz Association

Table Of Contents

1.	Welcome to the new module handbook of your study programme	14
2.	About this handbook	
	2.1. Notes and rules	
	2.1.1. Begin and completion of a module	
	2.1.2. Module versions	
	2.1.3. General and partial examinations	
	2.1.4. Types of exams	15
	2.1.5. Repeating exams	
	2.1.6. Examiners	16
	2.1.7. Additional accomplishments	
	2.1.8. Further information	
3.	Why Information Systems?	
	3.1. Special features of the Master's programme	17
4.	The study programme	
	4.1. Qualification goals	
	4.2. Structure according to SPO 2019	
5	Field of study structure	
5.	5.1. Master Thesis	
	5.2. Information Systems	
	5.3. Informatics	
	5.4. Economics and Management	
	5.5. Law	
	5.6. Seminars	
6	Modules	
0.	6.1. Access Control Systems Lab - M-INFO-104164	
	6.2. Access Control Systems: Foundations and Practice - M-INFO-103046	
	6.3. Accessibility - Assistive Technologies for Visually Impaired Persons - M-INFO-100764	
	6.4. Advanced Data Structures - M-INFO-102731	
	6.5. Advanced Topics in Public Finance - M-WIWI-101511	
	6.6. Advanced Topics in Strategy and Management - M-WIWI-103119	
	6.7. Algorithm Engineering - M-INFO-100795	
	6.8. Algorithmic Graph Theory - M-INFO-100762	
	6.9. Algorithmic Methods for Network Analysis - M-INFO-102400	
	6.10. Algorithms for Ad-Hoc and Sensor Networks - M-INFO-102093	
	6.11. Algorithms for Routing - M-INFO-100031	
	6.12. Algorithms for Visualization of Graphs - M-INFO-102094	
	6.13. Algorithms II - M-INFO-101173	
	6.14. Algorithms in Cellular Automata - M-INFO-100797	40
	6.15. Analytics and Statistics - M-WIWI-101637	41
	6.16. Application Security Lab - M-INFO-103166	
	6.17. Applied Differential Geometry - M-INFO-102226	
	6.18. Applied Strategic Decisions - M-WIWI-101453	44
	6.19. Asymmetric Encryption Schemes - M-INFO-100723	
	6.20. Automated Planning and Scheduling - M-INFO-104447	46
	6.21. Automated Visual Inspection and Image Processing - M-INFO-100826	47
	6.22. Big Data Analytics - M-INFO-100768	
	6.23. Big Data Analytics 2 - M-INFO-102773	49
	6.24. Biologically Inspired Robot - M-INFO-100814	
	6.25. Biometric Systems for Person Identification - M-INFO-102968	
	6.26. Business & Service Engineering - M-WIWI-101410	
	6.27. Cognitive Systems - M-INFO-100819	
	6.28. Collective Decision Making - M-WIWI-101504	
	6.29. Computational Cartography - M-INFO-100754	
	6.30. Computational Complexity Theory, with a View Towards Cryptography - M-INFO-101575	
	6.31. Computational Geometry - M-INFO-102110	
	6.32. Computer Architecture - M-INFO-100818	
	6.33. Computer Graphics - M-INFO-100856	59

6.34. Computer Vision for Human-Computer Interaction - M-INFO-100810	
6.35. Context Sensitive Systems - M-INFO-100728	
6.36. Critical Digital Infrastructures - M-WIWI-104403	
6.37. Cross-Functional Management Accounting - M-WIWI-101510	
6.38. Cryptographic Voting Schemes - M-INFO-100742	
6.39. Curves and Surfaces for Geometric Design - M-INFO-101231	
6.40. Curves and Surfaces in CAD I - M-INFO-100837	
6.41. Curves and Surfaces in CAD III - M-INFO-101213	
6.42. Data and Storage Management - M-INFO-100739	
6.43. Data Privacy: From Anonymization to Access Control - M-INFO-104045	69
6.44. Data Science for Finance - M-WIWI-105032	
6.45. Data Science: Advanced CRM - M-WIWI-101470	
6.46. Data Science: Data-Driven Information Systems - M-WIWI-103117	72
6.47. Data Science: Data-Driven User Modeling - M-WIWI-103118	74
6.48. Data Science: Evidence-based Marketing - M-WIWI-101647	
6.49. Datamanagement in the Cloud - M-INFO-100769	76
6.50. Decision Procedures with Applications to Software Verification - M-INFO-104381	77
6.51. Deep Learning and Neural Networks - M-INFO-104460	
6.52. Deep Learning for Computer Vision - M-INFO-104099	
6.53. Deployment of Database Systems - M-INFO-100780	
6.54. Design and Architectures of Embedded Systems (ES2) - M-INFO-100831	81
6.55. Design Principles for Interactive Real-Time Systems - M-INFO-100753	82
6.56. Designing Interactive Information Systems - M-WIWI-104080	83
6.57. Development of Business Information Systems - M-WIWI-101477	84
6.58. Digital Service Systems in Industry - M-WIWI-102808	85
6.59. Digital Signatures - M-INFO-100743	86
6.60. Distributed Computing - M-INFO-100761	87
6.61. Econometrics and Statistics I - M-WIWI-101638	88
6.62. Econometrics and Statistics II - M-WIWI-101639	89
6.63. Economic Theory and its Application in Finance - M-WIWI-101502	90
6.64. eEnergy: Markets, Services and Systems - M-WIWI-103720	91
6.65. Electronic Markets - M-WIWI-101409	92
6.66. Embedded Systems for Multimedia and Image Processing - M-INFO-100759	94
6.67. Empirical Software Engineering - M-INFO-100798	95
6.68. Energy Economics and Energy Markets - M-WIWI-101451	96
6.69. Energy Economics and Technology - M-WIWI-101452	97
6.70. Energy Informatics 1 - M-INFO-101885	98
6.71. Energy Informatics 2 - M-INFO-103044	99
6.72. Energy System Modelling - M-INFO-104117	100
6.73. Entrepreneurship (EnTechnon) - M-WIWI-101488	101
6.74. Environmental Economics - M-WIWI-101468	102
6.75. European and National Technology Law - M-INFO-104810	103
6.76. Experimental Economics - M-WIWI-101505	104
6.77. Finance 1 - M-WIWI-101482	105
6.78. Finance 2 - M-WIWI-101483	106
6.79. Finance 3 - M-WIWI-101480	107
6.80. FinTech Innovations - M-WIWI-105036	
6.81. Formal Systems - M-INFO-100799	
6.82. Formal Systems II: Application - M-INFO-100744	110
6.83. Formal Systems II: Theory - M-INFO-100841	
6.84. Fuzzy Sets - M-INFO-100839	
6.85. Geometric Optimization - M-INFO-100730	
6.86. Governance, Risk & Compliance - M-INFO-101242	
6.87. Graph Partitioning and Graph Clustering in Theory and Practice - M-INFO-100758	
6.88. Growth and Agglomeration - M-WIWI-101496	
6.89. Hands-on Bioinformatics Practical - M-INFO-101573	
6.90. Heterogeneous Parallel Computing Systems - M-INFO-100822	
6.91. Human Brain and Central Nervous System: Anatomy, Information Transfer, Signal Processing, Neurophysiology	119
and Therapy - M-INFO-100725	
6.92. Human Computer Interaction - M-INFO-100729	120

6.94. Human Machine Interaction in Anthropomatics Basics - M.INFO-100824 123 6.95. Human Mickolus - Practical Course - M.INFO-100755 125 6.97. Industrial Production II - M.WIW-101471 126 6.98. Industrial Production II - M.WIW-101471 128 6.98. Industrial Production II - M.WIW-101471 128 6.98. Industrial Production II - M.WIW-101471 128 6.99. Industrial Production II - M.WIW-101472 129 6.101. Information Systems: Engregarizations - M.WIW-104084 131 6.102. Information Systems: Engregarizations - M.WIW-104084 132 6.103. Information Systems: Engregarizations - M.WIW-104172 132 6.104. Information Systems: Engregarizations - M.WIW-104173 134 6.105. Innovation Economics - M.WIW-101517 135 6.106. Innovation Economics - M-WIW-101507 136 6.107. Innovative Concepts for Programming Industrial Robots - M-INFO-100747 139 6.108. Intelligent Systems and Services - M-WIW-101456 141 6.1111. Interactive Oscient Sistems - Management - M-INFO-100747 143 6.1111. Interactive Oscient Sistems - M-INFO-100728 142 6.1111. Interactive Oscient Sistems - M-INFO-100736 144 6.1111. Int	6.93. Human Factors in Security and Privacy - M-WIWI-104520	
695. Humanoid Robots-Practical Course: M-INFO-102560 124 696. Image Data Compression - M-INFO-100755 125 697. Industrial Production II - M-WWI-101412 126 698. Industrial Production II - M-WWI-101412 126 699. Information System: Analytical and Interactive Systems - M-WWI-104814 131 6101. Information System: Analytical and Interactive Systems - M-WWI-104814 131 6102. Information System: Engineering and Transformation - M-WWI-104814 133 6103. Information System: Stransformation - M-WWI-104812 133 6104. Innovation and Growth - M-WWI-101478 135 6105. Innovation Economics - M-WWI-101478 136 6107. Innovation Bocomics - M-WWI-10157 136 6108. Integrated Network and Systems: Management - M-INFO-100791 138 6109. Intellectual Property Law: M-INFO-100732 142 6111. Intractivic Computer Graphics - M-INFO-100736 143 6112. Interactive Computer Graphics - M-INFO-100736 145 6114. Introduction to Bioinformatics for Computer Scientists - M-INFO-100786 146 6114. Introduction to Vieth Analysis - M-INFO-100736 145 6114. Introduction to Vieth Analysis - M-INFO-100736 145 6114.		
696. Image Data Compression: M-INFO-100755 125 697. Industrial Production II. M-WIWI-101412 126 698. Industrial Production II. M-WIWI-101412 128 699. Information Processing in Sensor Networks - M-INFO-100895 129 6100. Information Systems in Organizations - M-WIWI-104084 131 6101. Information Systems: Engregenizations - M-WIWI-104081 132 6103. 1 Welcome to the new module handbook of your study programme

We are delighted that you have decided to study at the KIT Department of Economics and Management and KIT Department of Informatics. We wish you a good start into the new semester!

The following contact persons are at your disposal for questions and problems at any time.

For Bachelor Students

KIT Department of Economics and Management Kollegiengebäude am Kronenplatz Build. 05.20, Room 3B 05.2 Kaiserstraße 89 D-76133 Karlsruhe https://www.wiwi.kit.edu/

2 About this handbook

2.1 Notes and rules

The program exists of several **subjects** (e.g. business administration, economics, operations research). Every subject is split into **modules** and every module itself consists of one or more interrelated **module component exams**. The extent of every module is indicated by credit points (CP), which will be credited after the successful completion of the module. Some of the modules are **obligatory**. According to the interdisciplinary character of the program, a great variety of **individual specialization and deepening possibilities** exists for a large number of modules. This enables the student to customize content and time schedule of the program according to personal needs, interest and job perspective. The **module handbook** describes the modules belonging to the program. It describes particularly:

- the structure of the modules
- the extent (in CP),
- the dependencies of the modules,
- the learning outcomes,
- the assessment and examinations.

The module handbook serves as a necessary orientation and as a helpful guide throughout the studies. The module handbook does not replace the **course catalog**, which provides important information concerning each semester and variable course details (e.g. time and location of the course).

2.1.1 Begin and completion of a module

Each module and each examination can only be selected once. The decision on the assignment of an examination to a module (if, for example, an examination in several modules is selectable) is made by the student at the moment when he / she is registered for the appropriate examination. A module is completed or passed when the module examination is passed (grade 4.0 or better). For modules in which the module examination is carried out over several partial examinations, the following applies: The module is completed when all necessary module partial examinations have been passed. In the case of modules which offer alternative partial examinations, the module examination is concluded with the examination with which the required total credit points are reached or exceeded. The module grade, however, is combined with the weight of the predefined credit points for the module in the overall grade calculation.

2.1.2 Module versions

It is not uncommon for modules to be revised due to, for example, new courses or cancelled examinations. As a rule, a new module version is created, which applies to all students who are new to the module. On the other hand, students who have already started the module enjoy confidence and remain in the old module version. These students can complete the module on the same conditions as at the beginning of the module (exceptions are regulated by the examination committee). The date of the student's "binding declaration" on the choice of the module in the sense of §5(2) of the Study and Examination Regulation is decisive. This binding declaration is made by registering for the first examination in this module.

In the module handbook, all modules are presented in their current version. The version number is given in the module description. Older module versions can be accessed via the previous module handbooks in the archive at http://www.wiwi.kit.edu/Archiv_MHB.php.

2.1.3 General and partial examinations

Module examinations can be either taken in a general examination or in partial examinations. If the module examination is offered as a general examination, the entire learning content of the module will be examined in a single examamination. If the module examination is subdivided into partial examinations, the content of each course will be examined in corresponding partial examinations. Registration for examinations can be done online at the campus management portal. The following functions can be accessed on https://campus.studium.kit.edu/:

- Register/unregister for examinations
- Check for examination results
- Create transcript of records

For further and more detailed information, https://studium.kit.edu/Seiten/FAQ.aspx.

2.1.4 Types of exams

Exams are split into written exams, oral exams and alternative exam assessments. Exams are always graded. Non exam assessments can be repeated several times and are not graded.

2.1.5 Repeating exams

Principally, a failed written exam, oral exam or alternative exam assessment can repeated only once. If the repeat examination (including an eventually provided verbal repeat examination) will be failed as well, the examination claim is lost. A request for a

second repetition has to be made in written form to the examination committee two months after loosing the examination claim. A counseling interview is mandatory.

For further information see http://www.wiwi.kit.edu/hinweiseZweitwdh.php.

2.1.6 Examiners

The examination committee has appointed the KIT examiners and lecturers listed in the module handbook for the modules and their courses as examiners for the courses they offer.

2.1.7 Additional accomplishments

Additional accomplishments are voluntarily taken exams, which have no impact on the overall grade of the student and can take place on the level of single courses or on entire modules. It is also mandatory to declare an additional accomplishment as such at the time of registration for an exam. Additional accomplishments with at most 30 CP may appear additionally in the certificate.

2.1.8 Further information

More detailed information about the legal and general conditions of the program can be found in the examination regulation of the program (http://www.sle.kit.edu/amtlicheBekanntmachungen.php).

3 Why Information Systems?

Digitalization leads to profound changes in economy and society. The successful design of sustainable digital solutions requires competencies in the fields of information technology, business and law. By studying Information Systems, you will acquire the necessary qualifications for the digital world of work and life of the future. Become a designer of the digital economy and society with excellent, cross-sector career opportunities in start-ups, medium-sized businesses and large companies!

**Why Information Systems at KIT? Study Information Systems at KIT to successfully combine science and practice of digitization. KIT Information Systems is characterized by an interdisciplinary approach based on an interdisciplinary model. The central unique selling points and arguments for studying Information Systems at KIT are:

- Options**: You benefit from a high-quality and comprehensive range of courses offered by the two large KIT Departments of Informatics and Economics.
- Flexibility^{**}: In both the Bachelor's and Master's programmes, you can set your own priorities and develop your personal profile. At KIT you can study both a technical and a more economic profile of Information Systems.
- Problem solving competence**: The obligatory team project for software development in the Bachelor's programme implements the KIT concept of research-oriented teaching. Students develop functional application software in a team using modern methods and tools. The further development of specific problem-solving skills also plays an important role in the Master's programme, for example in the form of design seminars in cooperation with practical experience.

The study programme Information Systems (B.Sc. / M.Sc.) will be offered at the Karlsruhe Institute of Technology (KIT) from the winter semester 2019/20.

Where can I get further information? Further information on the Bachelor's and Master's degree programmes is available at http://www.wirtschaftsinformatik.kit.edu.

3.1 Special features of the Master's programme

Interdisciplinary studies KIT Information Systems is characterized by a real interdisciplinary practice based on a cross-faculty model with the participation of the KIT Faculties of Informatics and Economics. The KIT graduates of the interdisciplinary, four-semester Master's program in Information Systems have an in-depth, research-oriented expertise in Information Systems and the related disciplines of Informatics, Economics, and Law. The Master's programme in Information Systems has a standard duration of four semesters and comprises 120 credit points. The contents of the Master's programme are organised in four pillars:

Subject	Scope
Information Systems	18 Credits
Informatics	30 Credits
Economics	18 Credit points
Law	18 Credit points

In the columns Information Systems, Informatics, Economics or Law, two seminars with 3 credit points each must be completed in total. The Master's thesis comprises 30 credit points.

Individual specialization opportunities The diverse and broad offerings of the two KIT Departments enable students to deepen their knowledge very flexibly according to their individual inclinations. The Information Systems modules cover both classical aspects of Information Systems, such as the development and management of business information systems, and more recent aspects of Information Systems, such as the design of digital business models. In the fields of Informatics, Economics and Law, students can choose from a wide range of modules. In Informatics this includes for example algorithms, data engineering, software engineering, robotics, artificial intelligence, telematics, security, and human-machine interaction. In Economics, there are choices in areas such as entrepreneurship, marketing, finance, production, operations research, econometrics or microeconomic theory. Another unique selling point of Karlsruhe Information Systems is the range of legal modules with a special focus on information technology.

Degree The study concludes in the 4th semester with a master thesis. Upon successful completion of the course, students are awarded the academic degree "Master of Science".

4 The study programme

4.1 Qualification goals

The KIT graduates of the interdisciplinary, four-semester Master's program in Information Systems have an in-depth researchoriented expertise in Information Systems and the related disciplines of Informatics, Economics and Law. This specialist knowledge is supplemented by subject-independent competences that can be applied across several disciplines. Depending on their profile, their qualifications are particularly suitable for interdisciplinary activities as IT managers, management consultants, technology entrepreneurs, process managers, company founders and for a further scientific career (scientist).

KIT business IT specialists are characterized by their interdisciplinary methodological competence and their innovative ability in shaping the digital transformation of business and society.

By combining their knowledge and competencies, they are able to independently recognize economic and information technology conditions as well as innovative development potentials for the digitization of processes, products and services and to implement them within the legal framework.

KIT business IT specialists design and develop interdisciplinary information goods and information systems from a socio-technical perspective with the aim of creating social and economic value through the digitisation of economy and society.

They are able to analyse and structure complex subject-relevant problems and requirements and develop tailor-made solutions and options for action.

They know how to identify the advantages and disadvantages of existing processes, models, technologies and approaches, compare them with alternatives, evaluate them critically and transfer them to new areas of application.

According to their needs, they can also combine, adapt or independently develop new solutions and implement them using innovative information and communication technologies. They can make and justify their decisions in a scientifically sound manner, taking into account social and ethical aspects.

They know how to critically interpret, validate, document and present the results obtained.

Graduates will be able to communicate with representatives at a scientific level and take on outstanding responsibility in a team.

4.2 Structure according to SPO 2019

The Master's programme in Information Systems has a standard duration of four semesters and comprises 120 credit points. Depending on personal interests and goals, the specialist knowledge acquired in the Bachelor's programme can be expanded and deepened within the scope of the study plan.

Figure 2 shows the subject and module structure with the allocation of credit points (LP) and, as an example, a possible distribution of modules over the semesters.

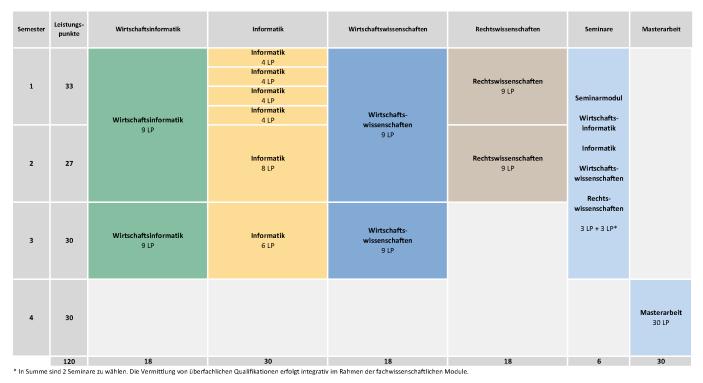

Figure 2: Structure of the Master's programme in Information Systems (german)

Within the scope of the master's programme, modules from the subjects of Information Systems, Informatics, Economics and Law are to be completed and a master's thesis is to be written.

In the subject Informatics, modules with a total volume of 30 credit points are to be taken. In the remaining subjects Information Systems, Economics and Law, modules with a total of 18 credit points must be proven.

In the subjects Information Systems, Informatics, Economics and Law, two seminars with 3 credit points each must be completed.

It is up to the individual study plan (taking into account the relevant requirements in the study and examination regulations as well as any module regulations) in which subject semester the selected module examinations are started or completed. However, it is recommended that all other academic achievements of the Master's examination be proven before the start of the Master's thesis.

All modules including options within the modules are described in the module handbook. WiWi seminars that can be attended as part of the seminar modules will be published on the Wiwi portal at https://portal.wiwi.kit.edu/Seminare.

Content

An information security model defines access rights that express for a given system which subjects are allowed to perform which actions on which objects. A system is said to be secure with respect to a given information security model, if it enforces the corresponding access rights. Thus, access control modeling and access control systems represent the fundamental building blocks of secure services, be it on the Web or in the Internet of Everything.

In this master-level course, we thoroughly investigate the evolution of access control models (access control matrix, role-based access control, attribute access control) and describe usage control models as a unified framework for both access control and digital rights management. The students experiment with real-world access control protocols and technologies and thus apply the contents of the lecture "Access Control Systems: Foundations and Practice" in a real-world context.

Workload

6 x (2h [Lab] + 10h [Task] + 2h [Troubleshooting] + 4h [Report] + 2h [Buffer]) = 120h

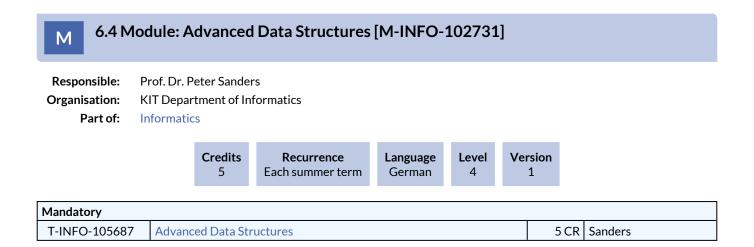

Mandatory

6.5 Module: Advanced Topics in Public Finance [M-WIWI-101511]

 Responsible:
 Prof. Dr. Berthold Wigger

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Volkswirtschaftslehre)

Mandatory					
T-WIWI-102740	Public Management	4,5 CR	Wigger		
Election block: Ergänzungsangebot (between 4,5 and 5 credits)					
T-WIWI-108880	Blockchains & Cryptofinance	4,5 CR	Schuster, Uhrig- Homburg		
T-WIWI-108711	Basics of German Company Tax Law and Tax Planning	4,5 CR	Gutekunst, Wigger		
T-WIWI-102739	Public Revenues	4,5 CR	Wigger		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- understands the theory and politics of taxation
- has knowledge in the area of public debt.
- understands efficiency problems of public organizations.
- is able to work on fiscal problems.

Prerequisites

The course "Public Management" is compulsory and must be examined.

Content

As a branch of Economics, Public Finance is concerned with the theory and policy of the public sector and its interrelations with the private sector. It analyzes the economic role of the state from a normative as well as from a positive point of view. The normative view examines efficiency- and equity-oriented motives for government intervention and develops fiscal policy guidelines. The positive view explains the actual behavior of economic agents in public sector affairs.

In the course of the lectures within this module the students achieve knowledge in the areas of public revenues, national and international law of taxation and theory of public sector organizations.

Recommendation

Basic knowledge in the area of public finance and public management is required.

Annotation

The course T-WIWI-102790 "Specific Aspects in Taxation" will no longer be offered in the module as of winter semester 2018/2019.

Students who successfully passed the exam in "Public Management" before the introduction of the module "Advanced Topics in Public Finance" in winter term 2014/15 are allowed to take both courses "Public Revenues" and "Specific Aspects in Taxation".

Workload

The total workload for this module is approximately 270 hours. For further information see German version.

6.6 Module: Advanced Topics in Strategy and Management [M-WIWI-103119]

Responsible:	Prof. Dr. Hagen Lindstädt
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (9 credits)				
T-WIWI-106188	Workshop Current Topics in Strategy and Management	3 CR	Lindstädt	
T-WIWI-106189	Workshop Business Wargaming – Analyzing Strategic Interactions	3 CR	Lindstädt	
T-WIWI-106190	Strategy and Management Theory: Developments and "Classics"	3 CR	Lindstädt	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- are able to analyze business strategies and derive recommendations using appropriate frameworks
- learn to express their position through compelling reasoning in structured discussions
- are qualified to critically examine recent research topics in the field of strategic management
- can derive own conclusions from less structured information by using interdisciplinary knowledge

Prerequisites

None

Content

The module is divided into three main topics:

The students

- analyze and discuss a wide range of business strategies on the basis of collectively selected case studies.
- participate in a business wargaming workshop and analyze strategic interactions.
- write a paper about current topics in the field of strategic management theory.

Recommendation

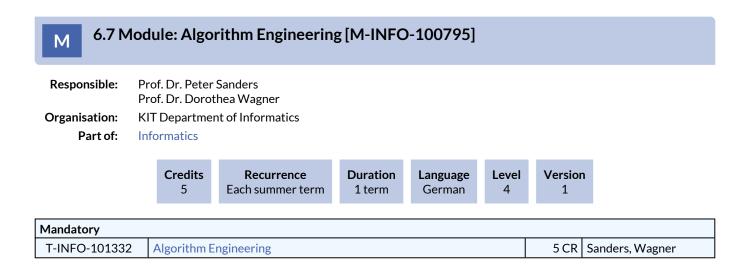

None

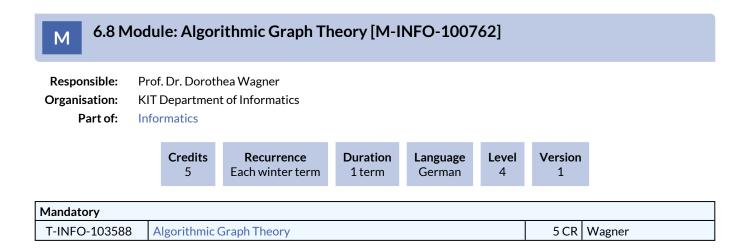

Annotation

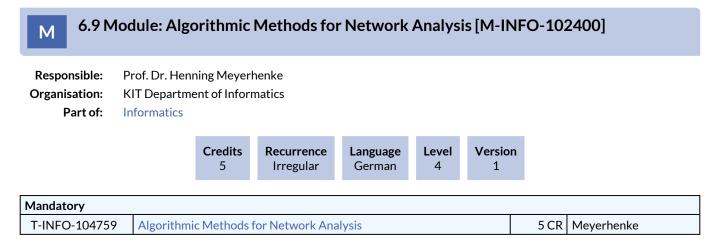

This course is admission restricted. After being admitted to one course of this module, the participation at the other courses will be guaranteed.

Every course of this module will be at least offered every second term. Thus, it will be possible to complete the module within two terms.

This module will be offered for the first time in the winter term 2017/18.

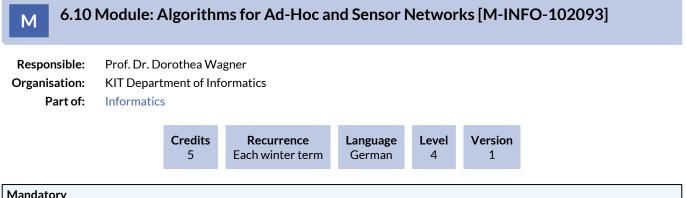

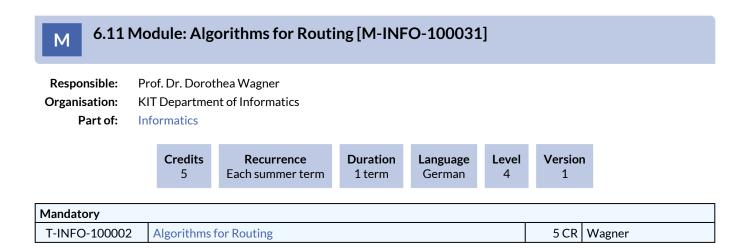

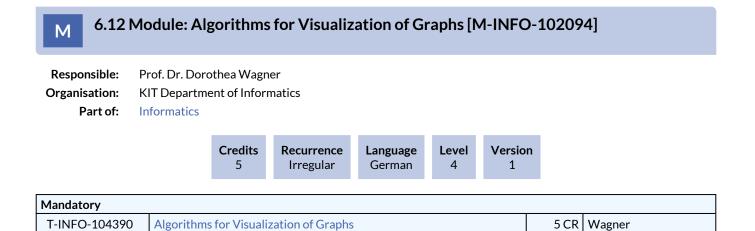

Workload

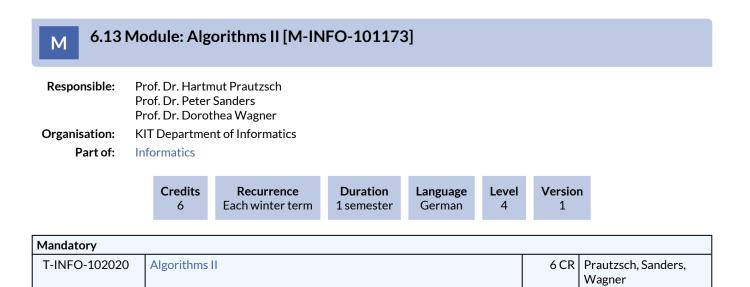

150 h

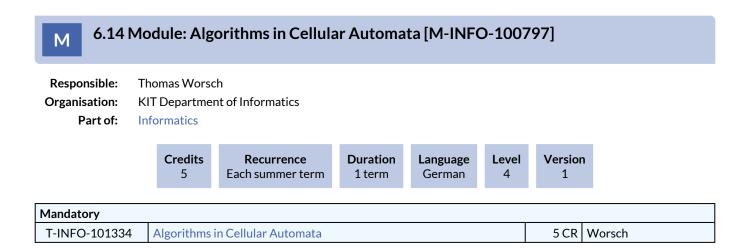

Mandatory			
T-INFO-104388	Algorithms for Ad-Hoc and Sensor Networks	5 CR	Wagner

6.15 Module: Analytics and Statistics [M-WIWI-101637]

Responsible:Prof. Dr. Oliver GrotheOrganisation:KIT Department of Economics and ManagementPart of:Economics and Management (Statistik)

Mandatory					
T-WIWI-103123	Advanced Statistics	4,5 CR	Grothe		
Election block: Ergänzungsangebot (between 4,5 and 5 credits)					
T-WIWI-106341	Machine Learning 2 – Advanced Methods	4,5 CR	Zöllner		
T-WIWI-103124	Multivariate Statistical Methods	4,5 CR	Grothe		

Competence Certificate

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations are offered every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

A Student

- Deepens the knowledge of descriptive and inferential statistics.
- Deals with simulation methods.
- Learns basic and advanced methods of statistical analysis of multivariate and high-dimensional data.

Prerequisites

The course "Advanced Statistics" is compulsory.

Content

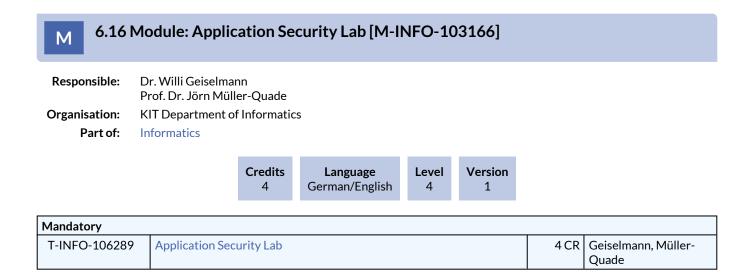

- Deriving estimates and testing hypotheses
- Stochastic processes
- Multivariate statistics, copulas
- Dependence measures
- Dimension reduction
- High-dimensional methods
- Prediction

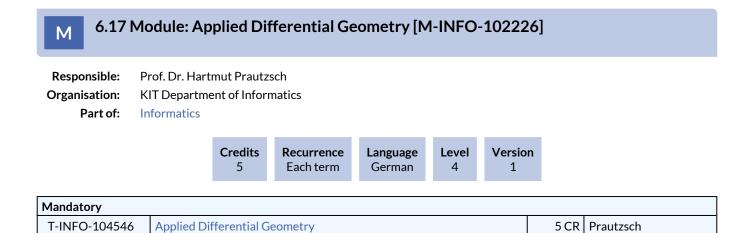

Annotation

The planned lectures and courses for the next three years are announced online.

Workload

The total workload for this module is approximately 270 hours.

6.18 Module: Applied Strategic Decisions [M-WIWI-101453]

 Responsible:
 Prof. Dr. Johannes Philipp Reiß

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot (1 item)					
T-WIWI-102861	Advanced Game Theory	4,5 CR	Ehrhart, Puppe, Reiß		
T-WIWI-106623	Technical Conditions Met	0 C R			
Election block: Ergä	Election block: Ergänzungsangebot (between 1 and 2 items as well as at least 4,5 credits)				
T-WIWI-102613	Auction Theory	4,5 CR	Ehrhart		
T-WIWI-102614	Experimental Economics	4,5 CR	Weinhardt		
T-WIWI-102622	Corporate Financial Policy	4,5 CR	Ruckes		
T-WIWI-102623	Financial Intermediation	4,5 CR	Ruckes		
T-WIWI-102640	Market Engineering: Information in Institutions	4,5 CR	Weinhardt		
T-WIWI-102862	Predictive Mechanism and Market Design	4,5 CR	Reiß		
T-WIWI-105781	Incentives in Organizations	4,5 CR	Nieken		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- can model and analyze complex situations of strategic interaction using advanced game theoretic concepts;
- are provided with essential and advanced game theoretic solution concepts on a rigorous level and can apply them to understand real-life problems;
- learn about the experimental method, ranging from designing an economic experiment to data analysis.

Prerequisites

The courseAdvanced Game Theory is obligatory. Exception: The courseIntroduction to Game Theory [2520525] was completed.

Content

The module provides solid skills in game theory and offers a broad range of game theoretic applications. To improve the understanding of theoretical concepts, it pays attention to empirical evidence as well.

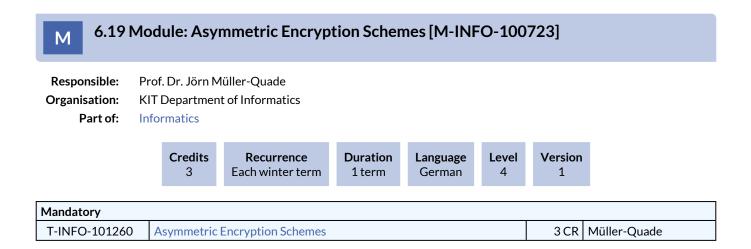

Recommendation

Basic knowledge in game theory is assumed.

Annotation

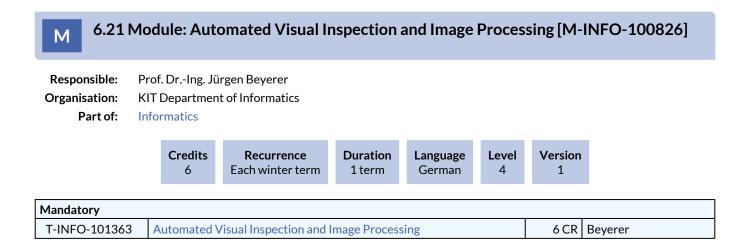

The course Predictive Mechanism and Market Design is not offered each year.

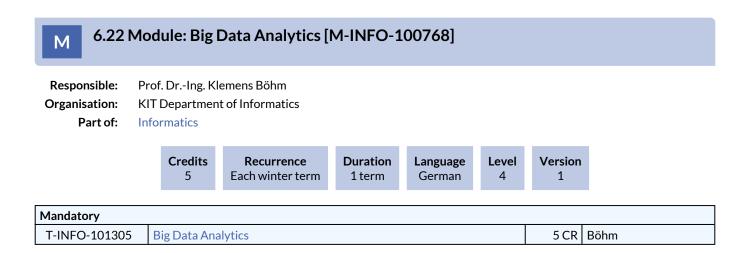

Workload

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student should

- learn to develop and implement new markets with regards to the technological progresses of information and communication technology and the increasing economic networking
- learn to restructure and develop new business processes in markets under those conditions
- understand service competition as a sustainable competitive strategy and understand the effects of service competition on the design of markets, products, processes and services.
- improve his statistics skills and apply them to appropriate cases
- learn to elaborate solutions in a team

Prerequisites

None

Content

This module addresses the challenges of creating new kinds of products, processes, services, and markets from a service perspective in the context of new developed information and communication technologies and the globalization process. The module describes service competition as a business strategy in the long term that leads to the design of business processes, business models, forms of organization, markets, and competition. This will be shown by actual examples from personalized services, recommender services and social networks.

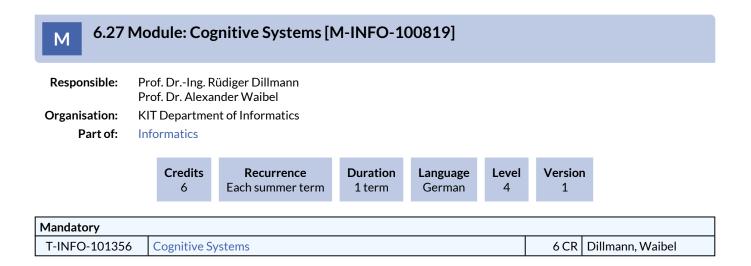

Recommendation

None

Annotation

All practical Seminars offered at the IM can be chosen for *Special Topics in Information Systems*. Please update yourself on www.iism.kit.edu/im/lehre.

Workload

6.28 Module: Collective Decision Making [M-WIWI-101504]

Responsible:	Prof. Dr. Clemens Puppe
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot ()				
T-WIWI-102740	Public Management	4,5 CR	Wigger	
T-WIWI-102859	Social Choice Theory	4,5 CR	Puppe	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- are able to model practical problems of the public sector and to analyze them with respect to positive and normative questions,
- understand individual incentives and social outcomes of different institutional designs,
- are familiar with the functioning and design of democratic elections and can analyze them with respect to their individual incentives.

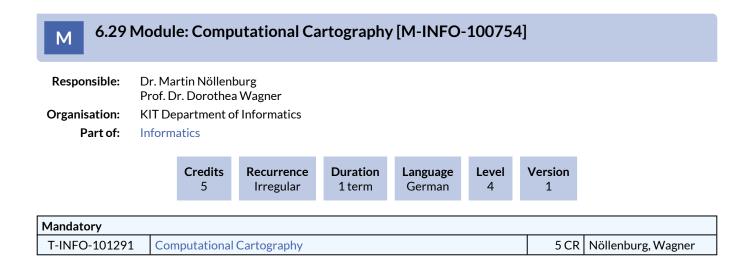

Prerequisites

None

Content

The focus of the module is on mechanisms of public decisions making, including voting and the aggregation of preferences and judgements.

T-WIWI-109249	Sociotechnical Information Systems Development	4,5 CR	Sunyaev			
T-WIWI-109251	Selected Issues in Critical Information Infrastructures	4,5 CR	Sunyaev			

Competence Certificate

The assessment is carried out as partial exams according to § 4 paragraph 2 Nr. 1 – Nr. 3 SPO of the examination regulation of the core course and further single courses of this module, whose sum of credits must meet 9 credits.

The learning control is described in each course. The overall score of the module is made up of the sub-scores weighted with creditpoints and is cut off after the first comma point.

Competence Goal

The students ...

- have foundational knowledge about the design and operation of critical digital infrastructures
- have in-depth methodological knowledge in design science research and related scientific domains
- can distinguish between the challenges and opportunities of critical digital infrastructures in different domains
- can evaluate and improve sociotechnical systems
- combine theoretical and practical contents of the courses in the module to solve existing problems in the domain of critical digital infrastructures

Prerequisites

None

Content

Critical digital infrastructures are sociotechnical systems comprising essential software components and information systems with pivotal impact on individuals, organizations, governments, economies, and society. Critical information infrastructures require careful design, development, and evaluation to ensure reliable, secure, and purposeful operation. This module features a strong focus on different subject areas, including, but not limited to, internet technologies, health care, and information privacy. The lectures in the module introduce students to a domain relevant to critical digital infrastructures and the labs allow to gain hands-on experience in this interesting domain.

Recommendation

The courses in the module may be held in English. Participants should be well versed in written and spoken English. The courses can be visited independently. Participants can start the module in the winter as well as in the summer term.

Programming skills may be required in some courses.

Experience in writing scientific papers is helpful but not required.

Annotation

This new module can be chosen from summer term 2018.

Workload

30 hours per ECTS Total workload for 9 ECTS: approx. 270 hours The exact allocation is made according to the credit points of the courses.

6.37 Module: Cross-Functional Management Accounting [M-WIWI-101510]

 Responsible:
 Prof. Dr. Marcus Wouters

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Betriebswirtschaftslehre)

Mandatory			
T-WIWI-102885	Advanced Management Accounting	4,5 CR	Wouters
Election block: Ergä	nzungsangebot (4,5 credits)		
T-WIWI-110179	Advanced Management Accounting 2	4,5 CR	Wouters
T-WIWI-105777	Business Intelligence Systems	4,5 CR	Mädche, Nadj, Toreini
T-WIWI-105781	Incentives in Organizations	4,5 CR	Nieken
T-WIWI-102835	Marketing Strategy Business Game	1,5 CR	Klarmann
T-WIWI-107720	Market Research	4,5 CR	Klarmann
T-WIWI-102883	Pricing	4,5 CR	Feurer
T-WIWI-109864	Product and Innovation Management	3 C R	Klarmann
T-WIWI-102621	Valuation	4,5 CR	Ruckes
T-WIWI-108651	Extraordinary additional course in the module Cross-Functional Management Accounting	4,5 CR	Wouters

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students will be able to apply advanced management accounting methods to managerial decision-making problems in marketing, finance, organization and strategy.

Prerequisites

The course "Advanced Management Accounting" is compulsory.

The additional courses can only be chosen after the compulsory course has been completed successfully.

Content

The module includes a course on several advanced management accounting methods that can be used for various decisions in operations and innovation management. By selecting another course, each student looks in more detail at one interface between management accounting a particular field in management, namely marketing, finance, or organization and strategy.

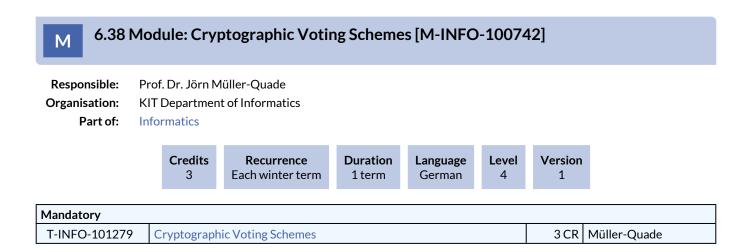

Recommendation

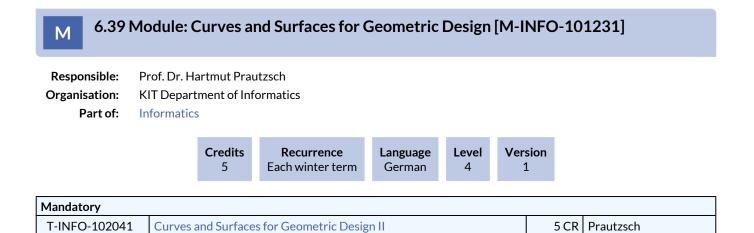

None

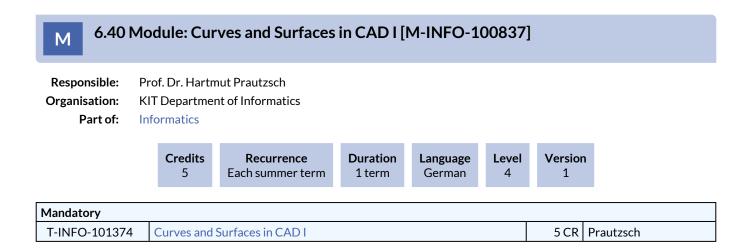

Annotation

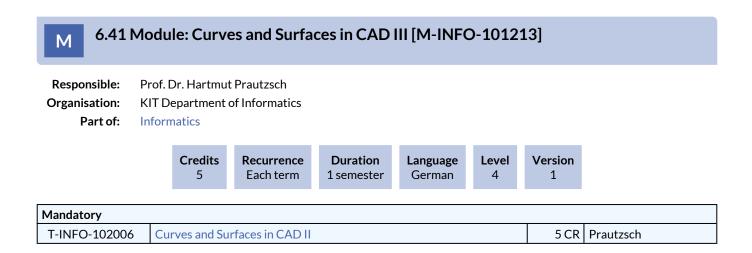

The module "Cross-functional Management Accounting" always includes the compulsory course "Advanced Management Accounting." Students look at the interface between management accounting and another field in management. Students build the module by adding a course from the specified list. Students can also suggest another suitable course for this module for evaluation by the coordinator.

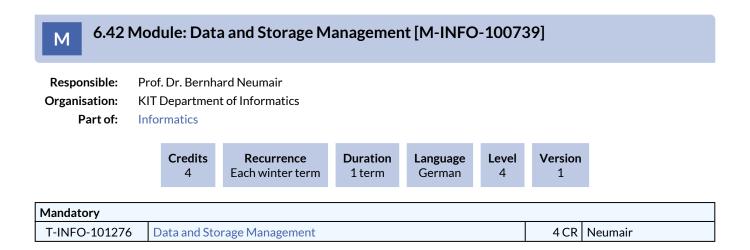

Workload

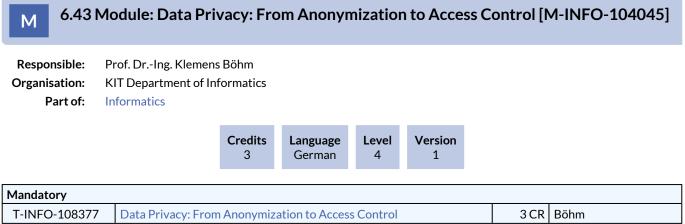

Mandatory			
T-INFO-108377	Data Privacy: From Anonymization to Access Control	3 C R	Böhm

6.44 Module: Data Science for Finance [M-WIWI-105032]

Responsible:	Prof. Dr Maxim Ulrich	
Organisation:	KIT Department of Economics and Management	
Part of:	Economics and Management (Betriebswirtschaftslehre)	

Mandatory			
T-WIWI-102878	Computational Risk and Asset Management	6 CR	Ulrich
T-WIWI-110213	Python for Computational Risk and Asset Management	3 C R	Ulrich

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module.

The assessment of "Computational Risk and Asset Management" is carried out in form of a written exam (90 minutes), the assessment of "Python for Computational Risk and Asset Management" is carried out in form of twelve weekly Python programming tasks and offered each winter term.

The overall grade of the module is the grade of the written exam weighted with factor 0.75 and the grade for the Python programming tasks weighted with factor 0.25. The resulting grade is truncated after the first decimal.

Competence Goal

Students learn how to implement solutions for advanced and real-world challenges in portfolio management. The focus of this module is on the realization of statistical concepts in Python and enable students to solve a broad range of problems along the investment process on their own.

Content

The module covers several topics, among them:

- Quantitative Portfolio Strategies: Extensions to Mean-Variance Portfolio Optimization
- Return Densities: Forecasting with Traditional and Machine Learning Approaches, Monte Carlo Simulation
- Financial Economics: Rationalizing Risk Premiums via Stochastic Discount Factor
- Multi-Asset Valuation: DCF Approach, No-Arbitrage and Ito Calculus

Recommendation

Good knowledge of statistics and first programming experience with Python is recommended.

Workload

Total effort for 9 credit points: approx. 270 hours. The distribution is based on the credit points of the courses of the module. The total number of hours per course results from the effort required to attend lectures and exercises, as well as the examination times and the time required to achieve the learning objectives of the module for an average student for an average performance.

6.45 Module: Data Science: Advanced CRM [M-WIWI-101470]

Responsible:	Prof. Dr. Andreas Geyer-Schulz	
Organisation:	KIT Department of Economics and Management	
Part of:	Economics and Management (Betriebswirtschaftslehre)	

Election block: Wahlpflichtangebot (9 credits)			
T-WIWI-109921	Advanced Machine Learning	4,5 CR	Geyer-Schulz, Nazemi
T-WIWI-102762	Business Dynamics	4,5 CR	Geyer-Schulz
T-WIWI-103549	Intelligent CRM Architectures	4,5 CR	Geyer-Schulz
T-WIWI-102848	Personalization and Services	4,5 CR	Sonnenbichler
T-WIWI-102847	Recommender Systems	4,5 CR	Geyer-Schulz
T-WIWI-105778	Service Analytics A	4,5 CR	Fromm

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- understand service competition as a sustainable competitive strategy and understand the effects of service competition on the design of markets, products, processes and services,
- models, analyzes and optimizes the structure and dynamics of complex business applications,
- develops and realizes personalized services, especially in the field of recommendation services,
- analyzes social networks and knows their application field in CRM,
- works in teams.

Prerequisites

None

Content

Building on the basics of CRM from the Bachelor's degree program, the module "Data Science: Advanced CRM" is focusing on the use of information technology and its related economic issues in the CRM environment. The course "Intelligent CRM Architectures" deals with the design of modern intelligent systems. The focus is on the software architecture and design patterns that are relevant to learning systems. It also covers important aspects of machine learning that complete the picture of an intelligent system. Examples of presented systems are "Taste Map"-architectures, "Counting Services", as well as architectures of "Business Games". The impact of management decisions in complex systems are considered in the course "Business dynamics". The understanding, modeling and simulation of complex systems allows the analysis, the goal-oriented design and the optimization of markets, business processes and regulations throughout the company. Specific problems of intelligent systems are covered in the courses "Personalization and Services", "Recommender Systems", "Service Analytics" and "Social Network Analysis in CRM". The content includes procedures and methods to create user-oriented services. The measurement and monitoring of service systems, the design of personalized offers, and the generation of recommendations based on the collected data of products and customers are discussed. The importance of user modeling and -recognition, data security and privacy are adressed as well.

Recommendation

None

Annotation

The module has been renamed to "Data Science: Advanced CRM" in winter term 2016/2017.

Workload

Responsible:	Prof. Dr. Alexander Mädche Prof. Dr. Christof Weinhardt	
Organisation:	n: KIT Department of Economics and Management	
Part of:	Part of: Economics and Management (Betriebswirtschaftslehre)	

Election block: Wahlpflichtangebot ()				
T-WIWI-109863	Business Data Analytics: Application and Tools	4,5 CR	Weinhardt	
T-WIWI-106187	Business Data Strategy	4,5 CR	Weinhardt	
T-WIWI-105777	Business Intelligence Systems	4,5 CR	Mädche, Nadj, Toreini	
T-WIWI-106207	Practical Seminar: Data-Driven Information Systems	4,5 CR	Mädche, Setzer, Weinhardt	
T-WIWI-105778	Service Analytics A	4,5 CR	Fromm	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

Competence Goal

The student

- understands the strategic role of integrating, transforming, and analyzing large and complex enterprise data in modern business information systems and is capable of comparing and assessing strategic alternatives
- has the core skills to design, model, and control complex, inter-organisational analytical, processes, including various business functions as well as customers and markets
- understands the usage of performance indicators for a variety of controlling and management issues and is able to define models for generating the relevant performance indicators under considerations of data availability
- distinguishes different analytics methods and concepts and learn when to apply to better understand and anticipate business relationships and developments of industrial and in particular service companies to derive fact- and data- founded managerial actions and strategies.
- knows how to capture uncertainty in the data and how to appropriately consider and visualize uncertainty in decision support or business intelligence systems and analytical processes as a whole.

Prerequisites

None.

Content

The amount of business-related data availabe in modern enterprise information systems grows exponentially, and the various data sources are more and more integrated, transformed, and analyzed jointly to gain valuable business insights, pro-actively control and manage business processes, to leverage planning and decision making, and to provide appropriate, potentially novel services to customers based on relationships and developments observed in the data.

Also, data sources are more and more connected and single business unit that used to operate on separate data pools are now becoming highly integrated, providing tremendeous business opportunities but also challenges regarding how the data should be represented, integrated, preprocessed, transformed, and finally used in analytics planning and decision processes.

The courses of this module equip the students with core skills to understands the strategic role of integrating, transforming, and analyzing large and complex enterprise data in modern business information systems. Students will be capable to designing, comparing, and evaluating strategic alternatives. Also, students will learn how to design, model, and control complex analytical processes, including various business functions of industrial and service companies including customers and markets. Students learn core skills to understand fundamental strategies for integrating analytic models and operative controlling mechanisms while ensuring the technical feasibility of the resulting information systems.

Furthermore, the student can distinguish different methods and concepts in the realm of data science and learns when to apply. She/he will know the means of characterizing and analyzing hetergeneous, high-dimensional data available data in data warehouses and external data sources to gain additional insights valuable for enterprise planning and decision making. Also, the students know how to capture uncertainty in the data and how to appropriately consider and visualize uncertainty in business information and business intelligence systems.

The module offers the opportunity to apply and deepen this knowledge in a seminar and hands-on tutorials that are offered with all lectures.

Texteintrag

Recommendation

Basic knowledge of Information Management, Operations Research, Descriptive Statistics, and Inferential Statistics is assumed.

Annotation

The course "Business Data Strategy" can be chosen from winter term 2016 on.

6.47 Module: Data Science: Data-Driven User Modeling [M-WIWI-103118]

 Responsible:
 Prof. Dr. Christof Weinhardt

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (at least 9 credits)				
T-WIWI-102614	Experimental Economics	4,5 CR	Weinhardt	
T-WIWI-102899	Modeling and Analyzing Consumer Behavior with R	4,5 CR	Dorner, Weinhardt	
T-WIWI-108765	Practical Seminar: Advanced Analytics	4,5 CR	Weinhardt	
T-WIWI-109863	Business Data Analytics: Application and Tools	4,5 CR	Weinhardt	

Competence Certificate

The assessment is carried out as partial exams of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

Competence Goal

Students of this module

- learn methods for planning empirical studies, in particular laboratory experiments,
- acquire theoretical knowledge and practical skills in analysing empirical data,
- familiarize with different ways of modelling user behaviour, are able to critically discuss, and to evaluate them

Prerequisites

None

Content

Understanding and supporting user interactions with applications better plays an increasingly large role in the design of business applications. This applies both to interfaces for customers and to internal information systems. The data that is generated during user interactions can be channelled straight into business processes, for instance by analysing and decomposing purchase decisions, and by feeding this data into product design processes.

The Crowd Analytics section considers the analysis of data from online platforms, particularly of those following crowd- or peer-topeer based business models. This includes platforms like Airbnb, Kickstarter and Amazon Mechanical Turk.

Theoretical models of user (decision) behaviour help analyzing the empirically observed user behaviour in a systematic fashion. Testing these models and their predictions in controlled experiments (primarily in the lab) in turn helps refine theory and to generate practically relevant design recommendations. Analyses are carried out using advanced analytic methods.

Students learn fundamental theoretical models for user behaviour in systems and apply them to cases. Students are also taught methods and skills for conceptualizing and planning empirical studies and for analyzing the resulting data.

Recommendation

Basic knowledge of Information Management, Operations Research, Descriptive Statistics, and Inferential Statistics is assumed.

6.48 Module: Data Science: Evidence-based Marketing [M-WIWI-101647]

Responsible:Prof. Dr. Martin KlarmannOrganisation:KIT Department of Economics and ManagementPart of:Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (9 credits)				
T-WIWI-103139	Marketing Analytics	4,5 CR	Klarmann	
T-WIWI-107720	Market Research	4,5 CR	Klarmann	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the rst decimal.

Competence Goal

Students

- possess advanced knowledge of relevant market research contents
- know many different qualitative and quantitative methods for measuring customer behavior, preparation of strategic decisions, making causal deductions, usage of social media data and sales forecasting
- possess the statistical skills required for working in marketing research

Prerequisites

Keine.

Content

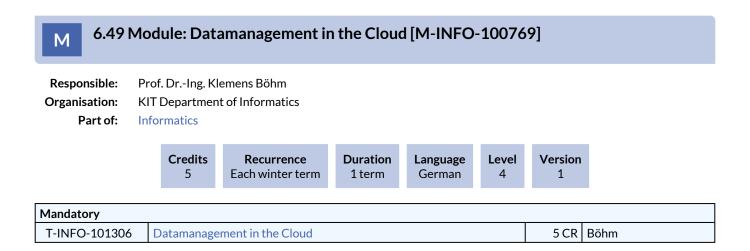

This module provides in-depth knowledge of relevant quantitative and qualitative methods used in market research. Students can attend the following courses:

- The course "Market Research" provides contents of practical relevance for measuring customer attitudes and customer behavior. The participants learn using statistical methods for strategic decision-making in marketing. Students who are interested in writing their master thesis at the Marketing & Sales Research Group are required to take this course.
- The course "Marketing Analytics" is based on "Market Research" and teaches advanced statistical methods for analyzing relevant marketing and market research questions.

Recommendation

6.50 Module: Decision Procedures with Applications to Software Verification [M-INFO-104381]

Responsible: Organisation: Part of:	Prof. Dr. Carsten S KIT Department or Informatics		5		
		Credits 5	Language German/English	Level 4	Version 1

Mandatory				
T-INFO-108955	Decision Procedures with Applications to Software Verification	5 CR	Sinz	

Competence Goal

Students should be able to grasp the underlying concepts in the field of deep learning and its various applications.

- Understand the theoretical basis of deep learning
- Understand the Convolutional Neural Networks (CNN)
- Develop basis for the concepts and algorithms used in building and training the CNNs.
- Able to apply deep learning in different computer vision applications.

Content

In recent years tremendous progress has been made in analysing and understanding image and video content. The dominant approach in Computer Vision today are deep learning approaches, in particular the usage of Convolutional Neural Networks.

The lecture introduces the basics, as well as advanced aspects of deep learning methods and their application for a number of computer vision tasks. The following topics will be addressed in the lecture:

- Introduction to Deep Learning
- Convolutional Neural Networks (CNN): Background
- CNNs: basic architectures and learning algorithms
- Object Recognition with CNN
- Image Segmentation with CNN
- Recurrent Neural Networks
- Generating image descriptions (Image Captioning)
- Automatic question answering (Visual Question Answering)
- Generative Adversarial Networks (GAN) and their applications
- Deep Learning platforms and tools

Annotation

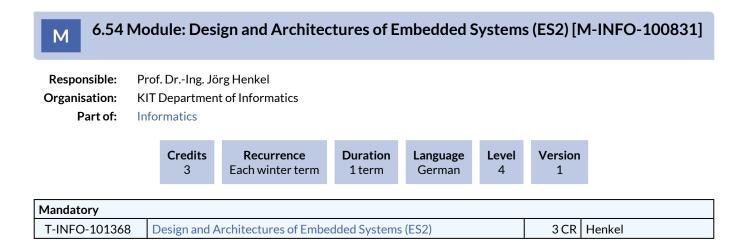

The course is partially given in German and English.

6.56 Module: Designing Interactive Information Systems [M-WIWI-104080]

Responsible:Prof. Dr. Alexander MädcheOrganisation:KIT Department of Economics and ManagementPart of:Economics and Management (Betriebswirtschaftslehre)

Mandatory					
T-WIWI-108461	Interactive Information Systems	4,5 CR	Mädche, Morana		
Election block: Ergänzungsangebot (at most 4,5 credits)					
T-WIWI-105773	Digital Service Design	4,5 CR	Mädche		
T-WIWI-108437	Practical Seminar: Information Systems and Service Design	4,5 CR	Mädche		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

Competence Goal

The student

- has a comprehensive understanding of conceptual and theoretical foundations of interactive systems
- knows design processes for interactive systems
- is aware of the most important techniques and tools for designing interactive systems and knows how to apply them to real-world problems
- is able to apply design principles for the design of most important classes of interactive systems,
- creates new solutions of interactive systems teams

Prerequisites

The course "Interactive Information Systems" is compulsory and must be examined.

Content

Advanced information and communication technologies make interactive systems ever-present in the users' private and business life. They are an integral part of smartphones, devices in the smart home, mobility vehicles as well as at the working place in production and administration (e.g. in the form of dashboards).

With the continuous growing capabilities of computers, the design of the interaction between human and computer becomes even more important. This module focuses on design processes and principles for interactive systems. The contents of the module abstract from the technical implementation details and focus on foundational concepts, theories, practices and methods for the design of interactive systems. The students get the necessary knowledge to guide the successful implementation of interactive systems in business and private life.

Each lecture in the module is accompanied with a capstone project that is carried out with an industry partner.

Annotation

See http://issd.iism.kit.edu/305.php for further information.

Workload

The total workload for this module is approximately 270 hours.

6.57 Module: Development of Business Information Systems [M-WIWI-101477]

T-WIWI-110548	Advanced Lab Informatics (Master)	4,5 CR	Professorenschaft des Fachbereichs Informatik		
T-WIWI-102669	Strategic Management of Information Technology	4,5 CR	Wolf		

Competence Certificate

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- describe the structure and the components of enterprise information systems,
- explain functionality and architecture of the enterprise information system components,
- choose and apply relevant components to solve given problems in a methodic approach,
- describe roles, activities and products in the field of software engineering management,
- compare process and quality models and choose an appropriate model in a concrete situation,
- write scientific theses in the areas of enterprise information system components and software engineering management and find own solutions for given problems and research questions.

Prerequisites

The course Datenbanksysteme und XML or the course Software Quality Management must be examined.

Content

An enterprise information system contains the complete application software to store and process data and information in an organisation including design and management of databases, workflow management and strategic information planning.

Due to global networking and geographical distribution of enterprises as well as the increasing acceptation of eCommerce the application of distributed information systems becomes particular important.

This module teaches concepts and methods for design and application of information systems.

Annotation

The course T-WIWI-102759 "Requirements Analysis and Requirements Management" will no longer be offered in the module as of winter semester 2018/2019.

6.58 Module: Digital Service Systems in Industry [M-WIWI-102808]

Responsible:	Prof. Dr. Wolf Fichtner Prof. Dr. Stefan Nickel
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (9 credits)					
T-WIWI-102872	Challenges in Supply Chain Management	4,5 CR	Mohr		
T-WIWI-102822	Industrial Services	4,5 CR	Fromm		
T-WIWI-107043	Liberalised Power Markets	3 C R	Fichtner		
T-WIWI-106200	Modeling and OR-Software: Advanced Topics	4,5 CR	Nickel		
T-WIWI-106201	Digital Transformation of Organizations	4,5 CR	Mädche		
T-WIWI-106563	Practical Seminar Digital Service Systems	4,5 CR	Satzger		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO), whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately. The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal

Competence Goal

Students

- understand the basics of the management of digital services applied on an industrial context
- gain an industry-specific insight into the importance and most relevant characteristics of information systems as key components of the digitalization of business processes, products and services
- are able to transfer and apply the models and methods introduced on practical scenarios and simulations.
- understand the control and optimization methods in the sector of service management and are able to apply them properly.

Prerequisites

This module can only be assigned as an elective module.

Content

This module aims at deepening the fundamental knowledge of digital service management in the industrial context. Various mechanisms and methods to shape and control connected digital service systems in different industries are discussed and demonstrated with real life application cases.

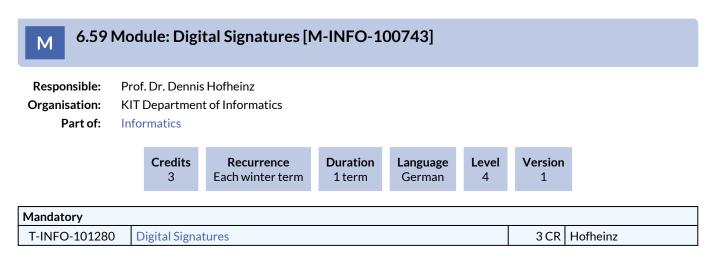

Recommendation

None

Annotation

This module is part of the KSRI teaching profile "Digital Service Systems". Further information on a service-specific profiling is available under www.ksri.kit.edu/teaching

Workload

Competence Goal

The student

- knows important signature schemes that are relevant in theory and practice (such as DSA and tree-based signatures),

- understands basic security notions and their relation (such as existential unforgeability under chosen-message attacks),

- is able to understand and apply basic proof techniques (such as reductions and hybrid arguments)

Content

Digital signatures are a fundamental primitive of modern cryptography. Their practical applications include, for instance, authenticated e-mail or certificate hierarchies on the internet.

This lecture will give an overview of important signature schemes with theoretical or practical relevance. This includes:

- One-time signatures, tree-based signatures, and chameleon hash functions

- RSA-based signatures
- Signatures in bilinear groups

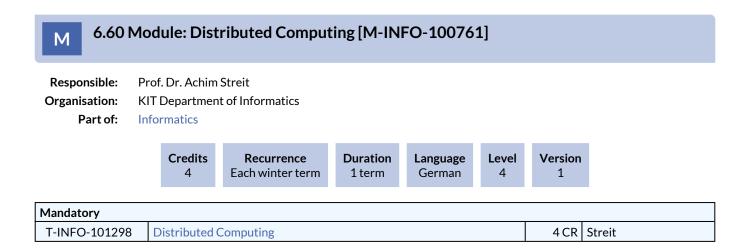

Goal of this lecture is not only to describe these schemes, but also to discuss their security. Therefore we will introduce various security notions for digital signatures, and analyze whether the presented schemes provably meet these notions (under certain hardness assumptions).

Depending on the student's preferences, the remaining time will be used to discuss advanced topics, such as:

- Schnorr signatures
- Programmable hash functions
- Tightness of reductions
- Analysis of hardness assumptions in the generic group model

Workload

90 h

6.61 Module: Econometrics and Statistics I [M-WIWI-101638]

Responsible:Prof. Dr. Melanie SchienleOrganisation:KIT Department of Economics and ManagementPart of:Economics and Management (Statistik)

Mandatory

Competence Certificate

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations are offered every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student shows an in depth understanding of advanced Econometric techniques suitable for different types of data. He/She is able to apply his/her theoretical knowledge to real world problems with the help of statistical software and to evaluate performance of different approaches based on statistical criteria.

Prerequisites

This module can only be passed if the module "Econometrics and Statistics I" has been finished successfully before.

Content

This modula builds on prerequisites acquired in Module" *Econometrics and Statistics I*". The courses of this module offer students a broad range of advanced Econometric techniques for state-of-the art data analysis.

Workload

The total workload for this module is approximately 270 hours.

6.63 Module: Economic Theory and its Application in Finance [M-WIWI-101502]

 Responsible:
 Prof. Dr. Kay Mitusch

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot (1 item)					
T-WIWI-102609	Advanced Topics in Economic Theory	4,5 CR	Mitusch		
T-WIWI-102861	Advanced Game Theory	4,5 CR	Ehrhart, Puppe, Reiß		
Election block: Ergä	Election block: Ergänzungsangebot (1 item)				
T-WIWI-102647	Asset Pricing	4,5 CR	Ruckes, Uhrig- Homburg		
T-WIWI-102622	Corporate Financial Policy	4,5 CR	Ruckes		
T-WIWI-109050	Corporate Risk Management	4,5 CR	Ruckes		
T-WIWI-102623	Financial Intermediation	4,5 CR	Ruckes		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The exams are offered at the beginning of the recess period about the subject matter of the latest held lecture. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately. The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The students

- have learnt the methods of formal economic modeling, particularly of General Equilibrium Theory and contract theory
- will be able to apply these methods to the topics in Finance, specifically the areas of financial markets and institutions and corporate finance
- have gained many useful insights into the relationship between firms and investors and the functioning of financial markets

Prerequisites

One of the courses T-WIWI-102861 "Advanced Game Theory" and T-WIWI-102609 "Advanced Topics in Economic Theory" is compulsary.

Content

The mandatory course "Advanced Topics in Economic Theory" is devoted in equal parts to General Equilibrium Theory and to contract theory. The course "Asset Pricing" will apply techniques of General Equilibrium Theory to valuation of financial assets. The courses "Corporate Financial Policy" and "Finanzintermediation" will apply the techniques of contract theory to issues of corporate finance and financial institutions.

Workload

6.64 Module: eEnergy: Markets, Services and Systems [M-WIWI-103720]

Responsible:	Prof. Dr. Christof Weinhardt
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (at least 9 credits)				
T-WIWI-107501	Energy Market Engineering	4,5 CR	Weinhardt	
T-WIWI-107503	Energy Networks and Regulation	4,5 CR	Weinhardt	
T-WIWI-107504	Smart Grid Applications	4,5 CR	Weinhardt	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately. The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- is aware of design options for energy and especially electricity markets and can derive implications for the market results from the market design,
- knows about current trends regarding the Smart Grid and understands affiliated modelling aproaches,
- can evaluate business models of electricity grids according to the regulation regime
- is prepared for scientific contributions in the field of energy system analysis.

Prerequisites

None.

Content

The module conveys scientific and practical knowledge to analyse energy markets and according business models. To do so the scientific discussion on energy market designs is evaluated and analysed. Different energy market models are presented and their design implications are evaluated. Furthermore, the electricity system is analysed with regards to being a network industry and resulting regulation and business models are discussed. Besides these traditional areas of energy economics we will look at methods and models of digitalisation in the energy sector.

Annotation

The lecture Smart Grid Applications will be available starting in the winter term 2018/19.

Workload

6.65 Module: Electronic Markets [M-WIWI-101409]

 Responsible:
 Prof. Dr. Andreas Geyer-Schulz

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (at least 9 credits)

T-WIWI-108880	Blockchains & Cryptofinance	4,5 CR	Schuster, Uhrig- Homburg
T-WIWI-102762	Business Dynamics	4,5 CR	Geyer-Schulz

T-WIWI-105946	Price Management	4,5 CR	Geyer-Schulz, Glenn
T-WIWI-102713	Telecommunication and Internet Economics	4,5 CR	Mitusch

Competence Certificate

Please note that the course "Business Administration in Information Engineering and Management" is no longer offered and that the examination is only offered in exceptional cases (see description of T-WIWI-102886).

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- knows coordination and motivation methods and analyzes them regarding their efficiency,
- classifies markets and describes the roles of the participants in a formal way,
- knows the conditions for market failure and knows and develops countermeasures,
- knows institutions and market mechanisms, their fundamental theories and empirical research results,
- knows the design criteria of market mechanisms and a systematical approach for creating new markets,
- models, analyzes and optimizes the structure and dynamics of complex business applications.

Prerequisites

None

Content

What are the conditions that make electronic markets develop and how can one analyse and optimize such markets?

In this module, the selection of the type of organization as an optimization of transaction costs is treated. Afterwards, the efficiency of electronic markets (price, information and allocation efficiency) as well as reasons for market failure are described. Finally, motivational issues like bounded rationality and information assymetries (private information and moral hazard), as well as the development of incentive schemes, are presented. Regarding the market design, especially the interdependencies of market organization, market mechanisms, institutions and products are described and theoretical foundations are lectured.

Electronic markets are dynamic systems that are characterized by feedback loops between many different variables. By means of the tools of business dynamics such markets can be modelled. Simulations of complex systems allow the analysis and optimization of markets, business processes, policies, and organizations.

Topics include:

- classification, analysis, and design of markets
- simulation of markets
- auction methods and auction theory
- automated negotiations
- nonlinear pricing
- continuous double auctions
- market-maker, regulation, control

Recommendation None

None

Annotation

The course Price Management is offered for the first time in summer term 2016.

Competence Certificate

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations take place every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal. Additional courses might be accredited upon request.

Competence Goal

The student

- gains detailed knowledge about the new requirements of liberalised energy markets,
- describes the planning tasks on the different energy markets,
- knows solution approaches to respective planning tasks.

Prerequisites

The lecture Liberalised Power Markets has to be examined.

Content

Liberalised Power Markets: The European liberalisation process, energy markets, pricing, market failure, investment incentives, market power

Energy Trade and Risk Management: trade centres, trade products, market mechanisms, position and risk management *Simulation Game in Energy Economics:* Simulation of the German electricity system

Recommendation

The courses are conceived in a way that they can be attended independently from each other. Therefore, it is possible to start the module in winter and summer term.

Workload

6.69 Module: Energy Economics and Technology [M-WIWI-101452]

T-WIWI-107464	Smart Energy Infrastructure	3 C R	Ardone, Pustisek	
T-WIWI-102695	Heat Economy	3 CR	Fichtner	

Competence Certificate

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations take place every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- gains detailed knowledge about present and future energy supply technologies (focus on final energy carriers electricity and heat),
- knows the techno-economic characteristics of plants for energy provision, for energy transport as well as for energy distribution and demand,
- is able to assess the environmental impact of these technologies.

Prerequisites

None

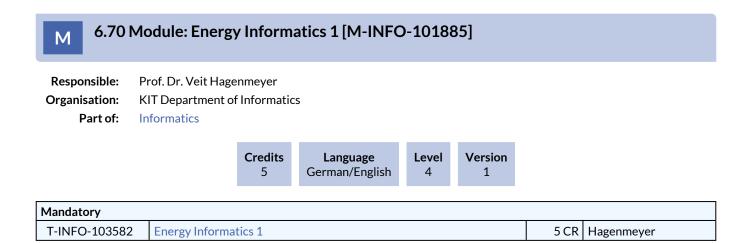

Content

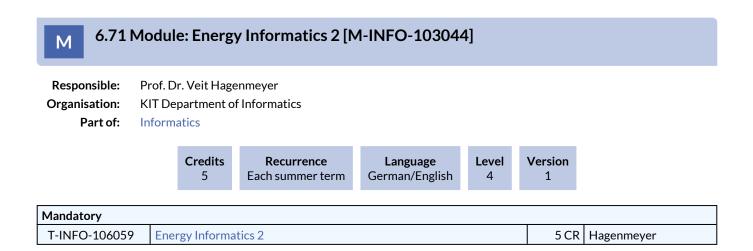

Heat Economy: district heating, heating technologies, reduction of heat demand, statutory provisions

Energy Systems Analysis: Interdependencies in energy economics, energy systems modelling approaches in energy economics Energy and Environment: emission factors, emission reduction measures, environmental impact

Efficient Energy Systems and Electric Mobility: concepts and current trends in energy efficiency, Overview of and economical, ecological and social impacts through electric mobility

Workload

6.72 Module: Energy System Modelling [M-INFO-104117]

Responsible:Dr. Thomas William BrownOrganisation:KIT Department of InformaticsPart of:Informatics

Mandatory			
T-INFO-108532	Energy System Modelling	4 CR	Brown
1-1101 0-100332	Lifeigy System Modelling	4 CK	BIOWII

Competence Goal

Qualifikationsziel:After the completion of the course students will have obtained basic knowledge of energy system modelling and optimisation, and be able to analyse different concepts for the integration of renewable energy, such as network reinforcement, storage, demand-side management and sector coupling.

Lernziele: Students are in the position to:

- describe and explain the challenges when integrating renewable energy in energy systems
- critically evaluate different concepts for the integration of renewable energy
- do model calculations for power systems based on renewable energies
- describe the basics of electricity market theory and operation
- program energy system models using standard open source tools

Content

This module will cover the many factors that influence future energy system design, with a focus on renewable energies and their interactions with energy networks.

Topics include:

- Time series analysis of wind, solar and energy demand in Europe.
- Complex network theory.
- Power flow in electrical networks.
- Modelling storage, the role of storage versus networks.
- Basics of optimisation, Karush-Kuhn-Tucker conditions.
- Basics of microeconomics.
- Economics of electricity markets.
- Short-run versus long-run efficiency.
- Network optimisation, storage optimisation.
- Programming energy system models.
- Coupling electricity to other energy sectors.
- Role of renewables in electricity markets.

Additional topics may also include:

- Dynamics in power networks.
- Contingency analysis.
- Effects of climate change on energy systems.

Recommendation

Basic knowledge of network theory and optimisation theory are helpful, but not required. Programming will be in Python. Basic knowledge of mathematics, differential equations, statistics and programming is assumed.

T-WIWI-102616	Environmental and Resource Policy	4 CR	Walz	
T-INFO-101348	Environmental Law	3 C R	Bäcker	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The exams are offered at the beginning of the recess period about the subject matter of the latest held lecture. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The students

- understand the treatment of non-market resources as well as future resource shortages
- are able to model markets of energy and environmental goods
- are able to assess the results of government intervention
- know legal basics and are able to evaluate conflicts with regard to legal situation

Prerequisites

None

Content

Environmental degradation and increasing resource use are global challenges, which have to be tackled on a worldwide level. The module addresses these challenges from the perspective of economics, and imparts the fundamental knowledge of environmental and sustainability economics, and environmental and resource policy to the students. Additional courses address environmental law, environmental pressure, and applications to the transport sector.

Recommendation

Knowledge in the area of microeconomics and of the content of the course *Economics I: Microeconomics*[2600012], respectively, is required.

Workload

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- are acquainted with the methods of Experimental Economics along with its strengths and weaknesses;
- understand how theory-guided research in Experimental Economics interacts with the development of theory;
- are provided with foundations in data analysis;
- design an economic experiment and analyze its outcome.

Prerequisites

None.

Content

The module Experimental Economics offers an introduction into the methods and topics of Experimental Economics. It also fosters and extends knowledge in theory-guided experimental economics and its interaction with theory development. Throughout the module, readings of selected papers are required.

Recommendation

Basic knowledge in mathematics, statistics, and game theory is assumed.

Annotation

The course "Predictive Mechanism and Market Design" is offered every second winter semester, e.g. WS2013 / 14, WS2015 / 16, ...

Workload

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- has core skills in economics and methodology in the field of finance
- assesses corporate investment projects from a financial perspective
- is able to make appropriate investment decisions on financial markets

Prerequisites

None

Content

The courses of this module equip the students with core skills in economics and methodology in the field of modern finance. Securities which are traded on financial and derivative markets are presented, and frequently applied trading strategies are discussed. A further focus of this module is on the assessment of both profits and risks in security portfolios and corporate investment projects from a financial perspective.

Workload

6.80 Module: FinTech Innovations [M-WIWI-105036]

Responsible:	Prof. Dr Maxim Ulrich
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Competence Certificate

The assessment is carried out in form of a written thesis based on the course "Engineering FinTech Solutions".

Competence Goal

Students with a strong technological background and/or a strong interest for software development and investments will learn how to build a prototype that automates essential steps for a fully automated investment and risk management process. Students also learn to organize themselves efficiently in teams of several developers in order to complete a prototype in a limited amount of time. Moreover, students deepen their understanding of finance and technology and learn how to combine both in an effective way. Students will hence be well prepared to become leaders and pioneers for upcoming FinTech innovations (and beyond) to help society to better invest for the future and to better protect from adverse risks.

Prerequisites

see T-WIWI-106193 "Engineering FinTech Solutions"

Content

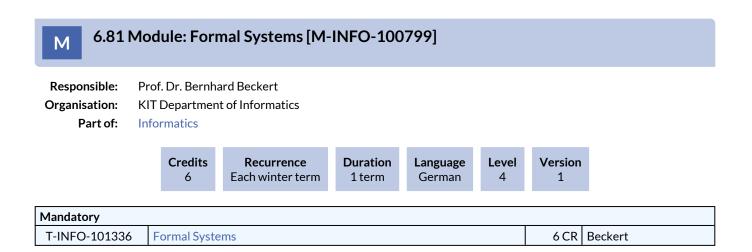

The module is targeted to students with strong knowledge in the field of computational risk and asset management and strong programming skills. It offers students the opportunity to develop an algorithmic solution and hence ample their programming experience and their understanding of financial economics or asset and risk management.

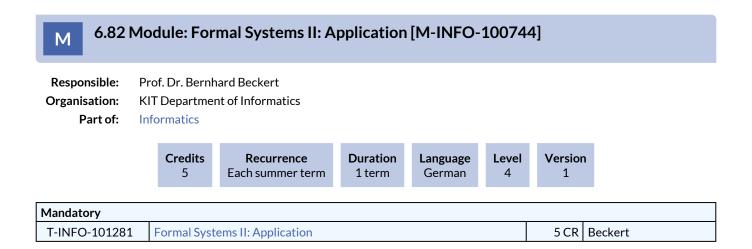

Recommendation

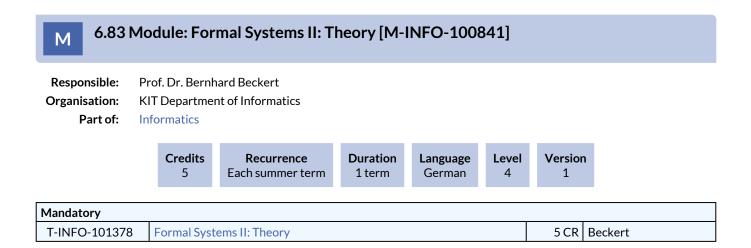

None

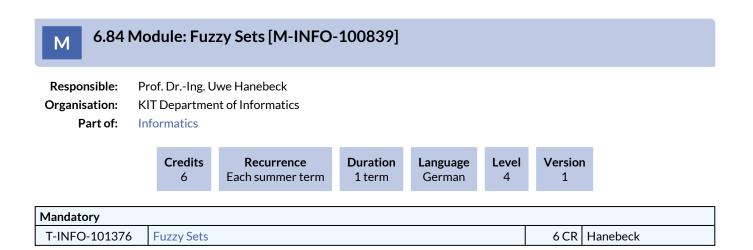

Workload

Competence Certificate

The assessment is carried out as partial written exams (see the lectures descriptions).

The overall grade for the module is the average of the grades for each course weighted by the credits.

Competence Goal

The student

- gains deepened knowledge of micro-based general equilibrium models
- understands how based on individual optimizing decisions aggregate phenomena like economic growth or agglomeration (cities / metropolises) result
- is able to understand and evaluate the contribution of these phenomena to the development of economic trends
- can derive policy recommendations based on theory

Prerequisites

None

Content

The module includes the contents of the lectures *Endogenous Growth Theory* [2561503], *Spatial Economics* [2561260] and *International Economic Policy* [2560254]. While the first two lectures have a more formal-analytic focus, the third lecture approaches fundamental ideas and problems from the field of international economic policy from a more verbal perspective.

The common underlying principle of all three lectures in this module is that, based on different theoretical models, economic policy recommendations are derived.

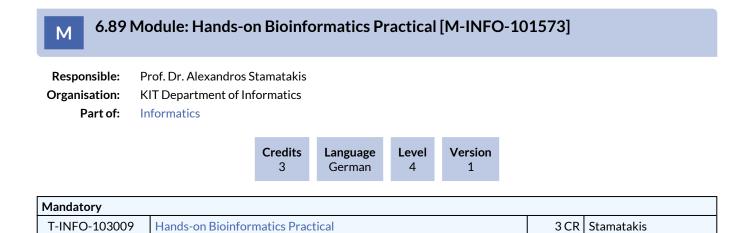

Recommendation

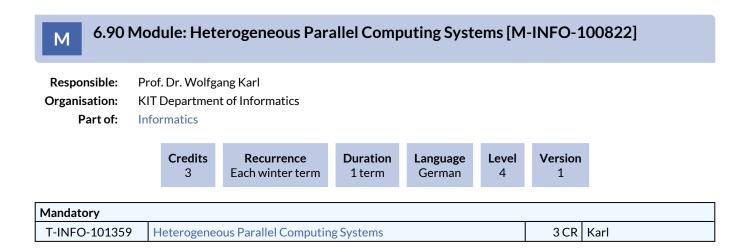

Attendance of the course Introduction Economic Policy [2560280] is recommended.

Successful completion of the coursesEconomics I: MicroeconomicsandEconomics II: Macroeconomicsis required.

Workload

The total workload for this module is approximately 270 hours. For further information see German version.

The module examination is carried out in the form of partial examinations on the selected courses of the module, with which the minimum requirement at creditpoints is fulfilled. The learning control is described in each course. The overall score of the module is made up of the sub-scores weighted with creditpoints and is cut off after the first comma point.

Competence Goal

Students ...

- know why many existing security and privacy mechanisms are not usable and why many awareness/education/training approaches are not effective
- can explain for concrete examples why these are not usable / not effective including why people are likely to face problems with these
- can explain what mental models are, why they are important and how they can be identified
- know how to conduct a cognitive walkthrough to identify problems with existing mechanisms and approaches
- know how to conduct semi-structured interviews
- know how user studies in the security context differ from those conducted in other contexts
- can explain the process of human centered security / privacy by design
- know the advantages and disadvantages of various graphical password schemes
- know concepts such as just in time and place security interventions

Prerequisites

None

Content

The history of information security and privacy has taught us that it takes more than technological innovation to develop effective security and privacy mechanisms: Many aspects of information security and privacy actually depend on both technical and human factors. As a result of focusing on the technical factors, we are seeing a persistent gap between theoretical security and actual security in real world which becomes an increasing problem in the age of digitalization. The gap is mainly caused by strong and actually unrealistic assumptions regarding the users' knowledge and behavior.

Human factors in security and privacy research addresses several types of security and privacy mechanisms, e.g., authentication mechanisms including text and graphical passwords, security and privacy indicators (such as the icons in the address bar of nowadays web browsers) and security and privacy interventions like warning messages, permission dialogs and security and privacy policies as well as corresponding configuration interfaces. Besides security and privacy mechanisms, human factors in security and privacy researchers deal with security and privacy awareness, education, and training approaches.

'Human factors in security & privacy' research areas are:

- identifying users' mental models using techniques such as (semi-)structured interviews or focus groups,
- evaluating existing approaches regarding their effectiveness in supporting their users in making secure decisions / informed decisions in the context of privacy using techniques such as cognitive walkthroughs, lab user studies or even field studies,
- proposing improved / new approaches and evaluating their effectiveness using the so called human-centered security / privacy by design approach.

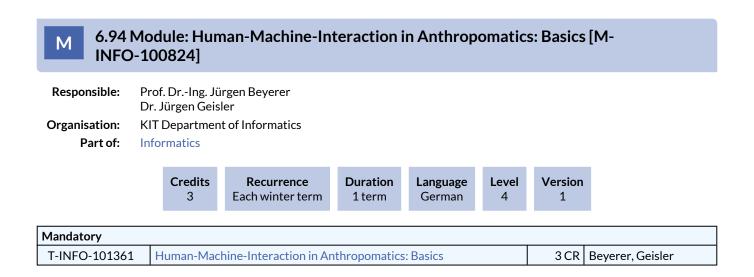

This module discusses the various problems of existing security and privacy mechanisms and security and privacy awareness/ education/training approaches. The lecture addresses relevant psychological and sociological aspects which are important to know and to consider when developing more usable security/privacy mechanisms and more effective awareness/education/training approaches. The human centered security and privacy by design approach is introduced. Furthermore, some of the methodologies used in this area are explained and a subset of them is applied. Finally, positive examples, such as graphical passwords, are introduced and discussed. Note,the main part of the exercise is replicating an interview based study. The main focus of the lab will be to replicate a quantitative based user study.

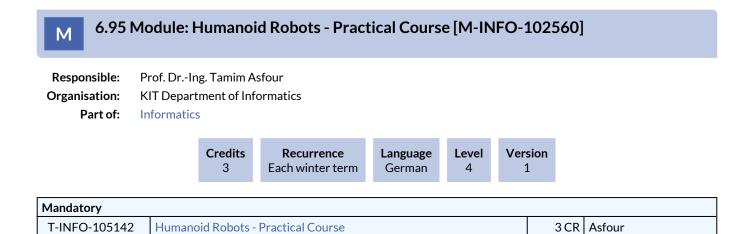

Annotation

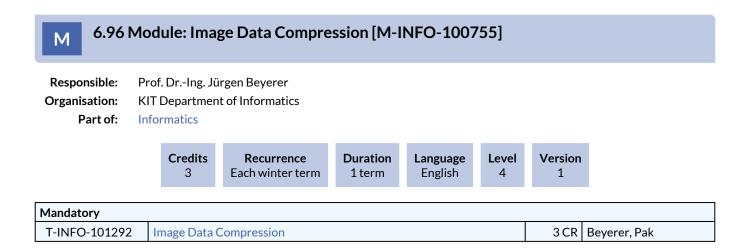

This new module can be chosen from winter term 2018/2019.

Workload

The total workload for this module is approximately 270 hours.

6.97 Module: Industrial Production II [M-WIWI-101471]

Responsible: Organisation: Part of: Prof. Dr. Frank Schultmann

KIT Department of Economics and Management

Economics and Management (Betriebswirtschaftslehre)

Mandatory					
T-WIWI-102631	Planning and Management of Industrial Plants	5,5 CR	Schultmann		
Election block: Ergär	nzungsangebot aus dem Modul Industrielle Produktion III (at most 1 ite	m)			
T-WIWI-102763	Supply Chain Management with Advanced Planning Systems	3,5 CR	Bosch, Göbelt		
T-WIWI-102826	Risk Management in Industrial Supply Networks	3,5 CR	Wiens		
T-WIWI-102828	Supply Chain Management in the Automotive Industry	3,5 CR	Heupel, Lang		
T-WIWI-103134	Project Management	3,5 CR	Schultmann		
Election block: Ergär	nzungsangebot (at most 1 item)				
T-WIWI-102634	Emissions into the Environment	3,5 CR	Karl		
T-WIWI-102882	International Management in Engineering and Production	3,5 CR	Sasse		
T-WIWI-110512	Life Cycle Assessment	3,5 CR	Schultmann		

Competence Certificate

The assessment is carried out as partial exams (according to section 4 (2), 1 SPO) of the core course *Planning and Managing of Industrial Plants* [2581952] and one further single course of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

- Students shall be able to describe the tasks of tactical production management with special attention drawn upon industrial plants.
- Students shall understand the relevant tasks in plant management (projection, realisation and supervising tools for industrial plants).
- Students shall be able to describe the special need of a techno-economic approach to solve problems in the field of tactical production management.
- Students shall be proficient in using selected techno-economic methods like investment and cost estimates, plant layout, capacity planning, evaluation principles of production techniques, production systems as well as methods to design and optimize production systems.
- Students shall be able to evaluate techno-economical approaches in planning tactical production management with respect to their efficiency, accuracy and relevance for industrial use.

Prerequisites

The course Planning and Managing of Industrial Plants [2581952] and at least one additional activity are compulsory and must be examined.

Content

• Planning and Management of Industrial Plants: Basics, circulation flow starting from projecting to techno-economic evaluation, construction and operating up to plant dismantling.

Annotation

Apart from the core course the courses offered are recommendations and can be replaced by courses from the Module Industrial Production III.

Workload

Total effort will account to 270 hours (9 credit points) and can be allocated according to the credit point rating. Therefore, a course with 3.5 credits requires an effort of approximately 105h and a course with 5.5 credits 165h.

The total effort for each course consists of attending lectures and tutorials, examination times and the time an average student needs to prepare himself in order to pass the exam with an average grade.

6.98 Module: Industrial Production III [M-WIWI-101412]

Responsible: Organisation: Part of: Prof. Dr. Frank Schultmann

KIT Department of Economics and Management

Economics and Management (Betriebswirtschaftslehre)

Mandatory					
T-WIWI-102632	Production and Logistics Management	5,5 CR	Schultmann		
Election block: Ergä	nzungsangebot aus dem Modul Industrielle Produktion II (at most 1 iten	ר)			
T-WIWI-102634	Emissions into the Environment	3,5 CR	Karl

T-WIWI-102826	Risk Management in Industrial Supply Networks	3,5 CR	Wiens		
T-WIWI-102828	Supply Chain Management in the Automotive Industry	3,5 CR	Heupel, Lang		
T-WIWI-103134	Project Management	3,5 CR	Schultmann		

Competence Certificate

The assessment is carried out as partial exams (according to section 4 (2), 1 SPO) of the core course *Production and Logistics Management* [2581954] and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

- Students describe the tasks concerning general problems of an operative production and logistics management.
- Students describe the planning tasks of supply chain management.
- Students use proficiently approaches to solve general planning problems.
- Students explain the existing interdependencies between planning tasks and applied methods.
- Students describe the mail goals and set-up of software supporting tools in production and logistics management (i.e. APS, PPS-, ERP- and SCM Systems).
- Students discuss the scope of these software tools and their general disadvantages.

Prerequisites

The course *Production and Logistics Management* [2581954] and at least one additional activity are compulsory and must be examined.

Content

- Planning tasks and exemplary methods of production planning and control in supply chain management.
- Supporting software tools in production and logistics management (APS, PPS- and ERP Systems).
- Project management in the field of production and supply chain management.

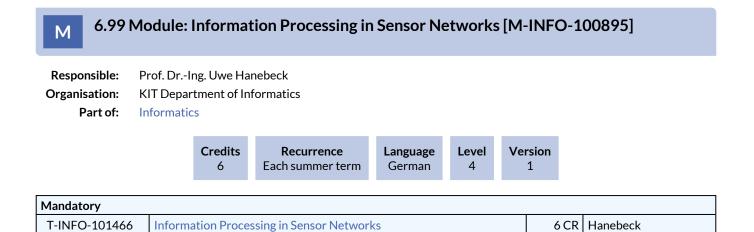

Annotation

Apart from the core course the courses offered are recommendations and can be replaced by courses from the Module Industrial Production II.

Workload

The total amount of work for this module is approx. 270 hours (9 credits). The allocation is made according to the credit points of the courses of the module.

The total number of hours per course results from the effort required to attend the lectures and exercises, as well as the examination times and the time required to achieve the learning objectives of the module for an average student for an average performance.

6.100 Module: Information Systems in Organizations [M-WIWI-104068]

Responsible: Prof. Dr. Alexander Mädche Organisation: KIT Department of Economics and Management Part of: Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (at least 9 credits)

T-WIWI-106201	Digital Transformation of Organizations	4,5 CR	Mädche		
T-WIWI-108461	Interactive Information Systems	4,5 CR	Mädche, Morana		
T-WIWI-108437	Practical Seminar: Information Systems and Service Design	4,5 CR	Mädche		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- has a comprehensive understanding of conceptual and theoretical foundations of informations systems in organizations
- is aware of the most important classes of information systems used in organizations:. process-centric, information-centric and people-centric information systems.
- knows the most important activities required to execute in the pre-implementation, implementation and postimplementation phase of information systems in organizations in order to create business value
- has a deep understanding of key capabilities of business intelligence systems and/or interactive information systems used in organizations

Prerequisites

None

Content

During the last decades we witnessed a growing importance of Information Technology (IT) in the business world along with faster and faster innovation cycles. IT has become core for businesses from an operational company-internal and external customer perspective. Today, companies have to rethink their way of doing business, from an internal as well as an external digitalization perspective.

This module focuses on the internal digitalization perspective. The contents of the module abstract from the technical implementation details and focus on foundational concepts, theories, practices and methods for information systems in organizations. The students get the necessary knowledge to guide the successful digitalization of organizations. Each lecture in the module is accompanied with a capstone project that is carried out in cooperation with an industry partner.

Annotation

New module starting summer term 2018.

Workload

The total workload for this module is approximately 270 hours.

2

6.101 Module: Information Systems: Analytical and Interactive Systems [M-Μ WIWI-104814]

Prof. Dr.-Ing. Klemens Böhm **Responsible:** Prof. Dr. Alexander Mädche **Organisation:** KIT Department of Economics and Management Part of: **Information Systems**

Election block: Wahlpflichtangebot ()					
T-WIWI-110373	Advanced Information Systems	5 CR	Mädche, Weinhardt		
T-INFO-101305	Big Data Analytics	5 CR	Böhm		
T-WIWI-108715	Artificial Intelligence in Service Systems	4,5 CR	Satzger		
T-WIWI-105777	Business Intelligence Systems	4,5 CR	Mädche, Nadj, Toreini		
T-INFO-101317	Deployment of Database Systems	5 CR	Böhm		
T-WIWI-103549	Intelligent CRM Architectures	4,5 CR	Geyer-Schulz		
T-WIWI-108461	Interactive Information Systems	4,5 CR	Mädche, Morana		
T-INFO-107499	Context Sensitive Systems	5 CR	Beigl		
T-WIWI-102847	Recommender Systems	4,5 CR	Geyer-Schulz		
T-WIWI-102809	Service Analytics	4,5 CR	Fromm, Setzer		
T-INFO-101326	Ubiquitous Computing	5 CR	Beigl		

Competence Certificate

The module examination takes place in the form of partial examinations in accordance with § 4 Para. 2 No. 1 - No. 3 SPO via courses of the module amounting to a total of at least 9 LP.

The overall score of the module is formed from the credit-weighted scores of the partial examinations and truncated after the first decimal place.

Competence Goal

The students

- are familiar with design principles of selected classes of modern analytical and interactive information systems and ٠ associated technologies
- know modern database concepts and application scenarios of modern database systems, understand the necessity of concepts for data analysis and can assess and compare approaches for the administration and analysis of large databases with regard to their effectiveness and applicability.
- know methods and techniques for designing analytical systems in the specific area of customer relationship management
- have knowledge of the basics and advanced methods and techniques of interactive information systems, especially context-sensitive and ubiquitous systems.

Content

In the module "Information Systems: Analytical and Interactive Systems" students learn about central design principles of selected classes of modern information systems and associated technologies. The module focuses on analytical and interactive information systems.

Workload

Total effort for 9 credit points: approx. 270 hours. The distribution is based on the credit points of the courses of the module (120-135h for courses with 4.5 credit points). The total number of hours per course results from the effort required to attend lectures and exercises, as well as the examination times and the time required to achieve the learning objectives of the module for an average student for an average performance.

2

6.102 Module: Information Systems: Engineering and Transformation [M-Μ WIWI-104812]

Prof. Dr. Sebastian Abeck **Responsible:** Prof. Dr. Ali Sunyaev **Organisation:** KIT Department of Economics and Management Part of: **Information Systems**

T-INFO-101271	Web Applications and Service-Oriented Architectures (II)	4 CR	Abeck		
T-WIWI-109270	Human Factors in Security and Privacy	4,5 CR	Volkamer		

Competence Certificate

The module examination takes place in the form of partial examinations in accordance with § 4 Para. 2 No. 1 - No. 3 SPO via courses of the module amounting to a total of at least 9 LP.

The overall score of the module is formed from the credit-weighted scores of the partial examinations and truncated after the first decimal place.

Competence Goal

The student

- learns techniques and procedures for the systematic development of high-quality software.
- can apply software quality assessment methods, evaluate results, and compare certification models.
- can reflect the content of the key concepts and technologies required to develop service-oriented Web applications and • model appropriate architectures, implement Web applications and assess their service characteristics.
- knows proven and novel concepts for the evaluation and analysis of (critical) IT infrastructures.
- knows methods and tools to successfully shape the digital transformation of companies under pursuit of a socio-technical paradigm.

Content

The module "Information Systems: Engineering and Transformation" deals with the systematic development and management of software, information systems/infrastructures and Internet-based services.

Workload

Total effort for 9 credit points: approx. 270 hours. The distribution is based on the credit points of the courses of the module (120-135h for courses with 4.5 credit points). The total number of hours per course results from the effort required to attend lectures and exercises, as well as the examination times and the time required to achieve the learning objectives of the module for an average student for an average performance.

6.103 Module: Information Systems: Internet-based Markets and Services [M-WIWI-104813]

Responsible: Prof. Dr. Christof Weinhardt

Organisation: KIT Department of Economics and Management Part of: Information Systems

Election block: Wahlpflichtangebot ()			
T-WIWI-110373	Advanced Information Systems	5 CR	Mädche, Weinhardt
T-WIWI-109246	Digital Health	4,5 CR	Sunyaev

T-WIWI-102640	Market Engineering: Information in Institutions	4,5 CR	Weinhardt
T-WIWI-102641	Service Innovation	4,5 CR	Satzger

Competence Certificate

The module examination takes place in the form of partial examinations in accordance with § 4 Para. 2 No. 1 - No. 3 SPO via courses of the module amounting to a total of at least 9 LP.

The overall score of the module is formed from the credit-weighted scores of the partial examinations and truncated after the first decimal place.

Competence Goal

The student

- understands the importance and potential of digitizing products and services
- can design digital markets and services with the associated business models.
- knows methods and tools to successfully design the digital transformation of products and services.
- acquires specific competencies for the digitization of domain-specific services, including healthcare and energy.

Content

The module "Information Systems: Internet-based Markets and Services" focuses on the design of Internet-based services and markets from an economic and technical point of view.

Workload

Total effort for 9 credit points: approx. 270 hours. The distribution is based on the credit points of the courses of the module (120-135h for courses with 4.5 credit points). The total number of hours per course results from the effort required to attend lectures and exercises, as well as the examination times and the time required to achieve the learning objectives of the module for an average student for an average performance.

6.104 Module: Innovation and Growth [M-WIWI-101478]

Responsible:	Prof. Dr. Ingrid Ott
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot (between 9 and 10 credits)			
T-WIWI-109194	Dynamic Macroeconomics	4,5 CR	Brumm
T-WIWI-102785	Theory of Endogenous Growth	4,5 CR	Ott
T-WIWI-102840	Innovationtheory and -Policy	4,5 CR	Ott

Competence Certificate

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The exams are offered at the beginning of the recess period about the subject matter of the latest held lecture. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students shall be given the ability to

- know the basic techniques for analyzing static and dynamic optimization models that are applied in the context of microand macroeconomic theories
- understand the important role of innovation to the overall economic growth and welfare
- identify the importance of alternative incentive mechanisms for the emergence and dissemination of innovations
- explain, in which situations market interventions by the state, for example taxes and subsidies, can be legitimized, and evaluate them in the light of economic welfare

Prerequisites

None

Content

The module includes courses that deal with issues of innovation and growth in the context of micro-and macroeconomic theories. The dynamic analysis makes it possible to analyze the consequences of individual decisions over time, and sheds light on the tension between static and dynamic efficiency in particular. In this context is also analyzed, which policy is appropriate to carry out corrective interventions in the market and thus increase welfare in the presence of market failure.

Recommendation

Basic knowledge of micro- and macroeconomics is assumed, as taught in the courses Economics I [2600012], and Economics II [2600014]. In addition, an interest in quantitative-mathematical modeling is required.

Workload

Total expenditure of time for 9 credits: 270 hours

Attendance time per lecture: 3x14h

Preparation and wrap-up time per lecture: 3x14h

Rest: Exam Preparation

The exact distribution is subject to the credits of the courses of the module.

6.105 Module: Innovation Economics [M-WIWI-101514]

Responsible:Prof. Dr. Ingrid OttOrganisation:KIT Department of Economics and ManagementPart of:Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot (between 9 and 10 credits)			
T-WIWI-102840	Innovationtheory and -Policy	4,5 CR	Ott
T-WIWI-102906	Methods in Economic Dynamics	1,5 CR	Ott
T-WIWI-109864	Product and Innovation Management	3 C R	Klarmann
T-WIWI-102789	Seminar in Economic Policy	3 C R	Ott

Competence Certificate

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations are offered every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students shall be given the ability to

- understand the important role of innovation for economic growth and welfare
- understand the relevance of alternative incentive mechanisms for the emergence and dissemination of innovations
- know basic terms of product and innovation concepts
- know fundamental concepts of innovation management
- work with fundamental theoretical innovation models and to implement them in appropriate computer algebra systems
- query appropriate data sources and to analyse and visualise them using statistical methods

Prerequisites

None

Content

The module provides students with knowledge about implications of technological and organizational changes.

Addressed economic issues are incentives for developing innovations, diffusion processes, and associated effects. In this context the module analyses appropriate policies in the presence of market failures to take corrective action on the market process and thus to increase the dynamic efficiency of economies.

Furthermore, the module offers the possibility to learn about different aspects of theoretical modelling of innovation-based growth as a part of the seminar and the methods-workshop. This includes the implementation of formal models in computer algebra systems as well as recording, processing and econometric analysis of related data from relational databases (concerning for example patents or trademarks). Moreover, methods of network theory are applied.

Finally, the module emphasises the business perspective: Issues of all stages of innovation processes will be discussed, from innovation strategies up to the market commercialisation.

Recommendation

Basic knowledge of micro- and macroeconomics is assumed, as taught in the courses Economics I [2600012] and Economics II [2600014]. Further, it is assumed that students have interest in using quantiative-mathematical methods.

Workload

The total workload for this module is approximately 270 hours. For further information see German version.

6.106 Module: Innovation Management [M-WIWI-101507] Μ **Responsible:** Prof. Dr. Marion Weissenberger-Eibl **Organisation:** KIT Department of Economics and Management Part of: Economics and Management (Betriebswirtschaftslehre) Credits Recurrence Duration Language Level Version 9 Each term 1 semester German/English 4 6 Mandatory T-WIWI-102893 3 CR Weissenberger-Eibl Innovation Management: Concepts, Strategies and Methods Election block: Wahlpflichtangebot (1 item) T-WIWI-102873 **Current Issues in Innovation Management** 3 CR Weissenberger-Eibl 3 CR Koch T-WIWI-108875 **Digital Transformation and Business Models** T-WIWI-102852 3 CR Weissenberger-Eibl **Case Studies Seminar: Innovation Management** T-WIWI-108774 Analyzing and Evaluating Innovation Processes 3 CR Beyer T-WIWI-110234 **Innovation Processes Live** 3 CR Beyer 3 CR T-WIWI-110263 Methods in Innovation Management Koch T-WIWI-102853 3 CR Koch Roadmapping T-WIWI-109932 A Closer Look at Social Innovation 3 CR Beyer T-WIWI-102858 3 CR Koch **Technology Assessment** 3 CR Koch T-WIWI-102854 **Technologies for Innovation Management** Election block: Ergänzungsangebot (1 item) T-WIWI-102873 **Current Issues in Innovation Management** 3 CR Weissenberger-Eibl T-WIWI-102866 **Design Thinking** 3 CR Terzidis T-WIWI-108875 3 CR Koch **Digital Transformation and Business Models** T-WIWI-102833 Entrepreneurial Leadership & Innovation Management 3 CR Terzidis 3 CR T-WIWI-102864 Entrepreneurship Terzidis T-WIWI-102852 **Case Studies Seminar: Innovation Management** 3 CR Weissenberger-Eibl T-WIWI-108774 Analyzing and Evaluating Innovation Processes 3 CR Beyer T-WIWI-110234 **Innovation Processes Live** 3 CR Beyer 3 CR Koch T-WIWI-110263 Methods in Innovation Management T-WIWI-102853 3 CR Koch Roadmapping T-WIWI-109932 A Closer Look at Social Innovation 3 CR Beyer T-WIWI-102854 **Technologies for Innovation Management** 3 CR Koch T-WIWI-102858 **Technology Assessment** 3 CR Koch

Competence Certificate

See German version.

Competence Goal

Students develop a comprehensive understanding of the innovation process and its conditionality. There is an additional focus on the concepts and processes which are of particular relevance with regard to shaping the entire process. Various strategies and methods are then taught based on this.

After completing the module, students should have developed a systemic understanding of the innovation process and be able to shape this by developing and applying suitable methods.

Prerequisites

The lecture "Innovation Management: Concepts, Strategies and Methods" and one of the seminars of the chair for Innovation and Technology Management are compulsory. The third course can be chosen from the courses of the module.

Content

The Innovation Management: Concepts, Strategies and Methods lecture course teaches concepts, strategies and methods which help students to form a systemic understanding of the innovation process and how to shape it. Building on this holistic understanding, the seminar courses then go into the subjects in greater depth and address specific processes and methods which are central to innovation management.

Recommendation

None

Workload

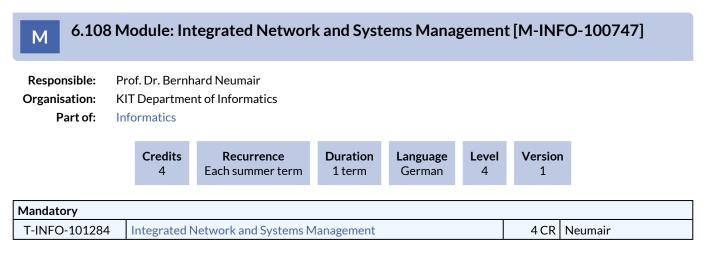

The total workload for this module is approximately 270 hours. For further information see German version.

Algorithms for Internet Applications [T-WIWI-102658]: The examination will be offered latest until summer term 2017 (repeaters only).

Competence Goal

Students

- know the different machine learning procedures for the supervised as well as the unsupervised learning,
- identify the pros and cons of the different learning methods,
- apply the discussed network learning methods in specific scenarios,
- compare the practicality of methods and algorithms with alternative approaches.

Prerequisites

None

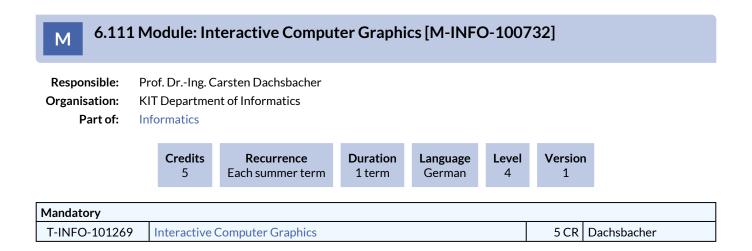

Content

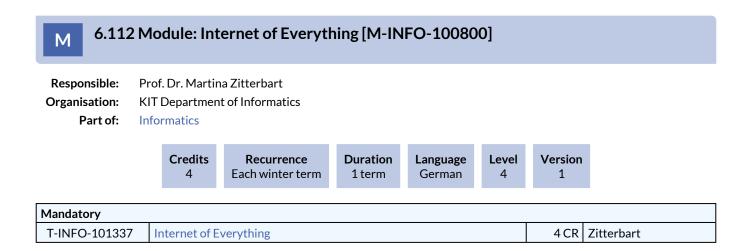

In the broader sense learning systems are understood as biological organisms and artificial systems which are able to change their behavior by processing outside influences. Network leaning methods based on symbolic, statistic and neuronal approaches are the focus of Computer Sciences.

In this module the most important network learning methods are introduced and their applicability is discussed with regard to different information sources such as data texts and images considering especially procedures for knowledge acquirement via data and text mining, natural analogue procedures as well as the application of organic learning procedures within the finance sector.

T-WIWI-106340 Machine Learning 1 - Basic Methods 4,5 CR Zöllner				
T-WIWI-106341	Machine Learning 2 – Advanced Methods	4,5 CR	Zöllner	
T-WIWI-109985	Project Lab Cognitive Automobiles and Robots	4,5 CR	Zöllner	
T-WIWI-109983	Project Lab Machine Learning	4,5 CR	Zöllner	

Competence Certificate

The module examination is carried out in the form of partial examinations on the selected courses of the module, with which the minimum requirement at creditpoints is fulfilled. The learning control is described in each course. The overall score of the module is made up of the sub-scores weighted with creditpoints and is cut off after the first comma point.

Competence Goal

- Students gain knowledge of the basic methods in the field of machine learning.
- Students understand advanced concepts of machine learning and their application.
- Students can classify, formally describe and evaluate methods of machine learning.
- Students can use their knowledge to select suitable models and methods for selected problems in the field of machine learning.

Prerequisites

None

Content

The subject area of ??machine intelligence and, in particular, machine learning, taking into account real challenges of complex application domains, is a rapidly expanding field of knowledge and the subject of numerous research and development projects.

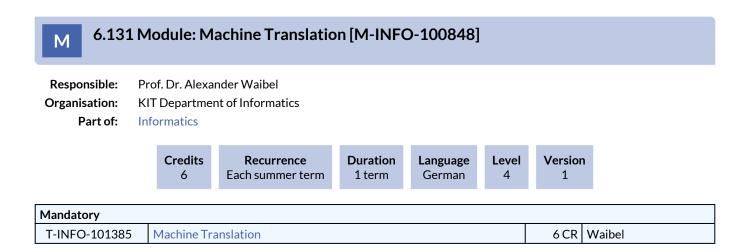

The lecture "Machine Learning 1" covers both symbolic learning methods such as inductive learning (learning from examples, learning by observation), deductive learning (explanation-based learning) and learning from analogies, as well as subsymbolic techniques such as neural networks, support vector machines, genetics Algorithms and reinforcement learning. The lecture introduces the basic principles as well as fundamental structures of learning systems and the learning theory and examines the previously developed algorithms. The design and operation of learning systems is presented and explained in some examples, especially in the fields of robotics, autonomous mobile systems and image processing.

The lecture "Machine Learning 2" deals with advanced methods of machine learning such as semi-supervised and active learning, deep neural networks (deep learning), pulsed networks, hierarchical approaches, e.g. As well as dynamic, probabilistic relational methods. Another focus is the embedding and application of machine learning methods in real systems.

The lecture introduces the latest basic principles as well as extended basic structures and elucidates previously developed algorithms. The structure and the mode of operation of the methods and methods are presented and explained by means of some application scenarios, especially in the field of technical (sub) autonomous systems (robotics, neurorobotics, image processing, etc.).

Workload

The total workload for this module is approximately 270 hours.

6.132 Module: Management Accounting [M-WIWI-101498]

Responsible:	Prof. Dr. Marcus Wouters
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Credits	Recurrence	Duration	Language	Level	Version
9	Each term	2 semester	English	4	2

	Mandatory				
	T-WIWI-102800	Management Accounting 1	4,5 CR	Wouters	
Γ	T-WIWI-102801	Management Accounting 2	4,5 CR	Wouters	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 13 SPO) of the courses of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- are familiar with various management accounting methods,
- can apply these methods for cost estimation, profitability analysis, and product costing,
- are able to analyze short-term and long-decisions with these methods,
- have the capacity to devise instruments for organizational control.

Prerequisites

None

Content

The module consists of two courses "Management Accounting 1" and "Management Accounting 2". The emphasis is on structured learning of management accounting techniques.

Annotation

The following courses are part of this module:

- The course Management Accounting 1, which is offered in every sommer semester
- The course Management Accounting 2, which is offered in every winter semester

Workload

6.133 Module: Market Engineering [M-WIWI-101446]

Responsible: Organisation: Part of: Prof. Dr. Christof Weinhardt

KIT Department of Economics and Management

Economics and Management (Betriebswirtschaftslehre)

Mandatory							
T-WIWI-102640	Market Engineering: Information in Institutions 4,5 CR Weinhardt						
Election block: Ergä	nzungsangebot (4,5 credits)						
T-WIWI-102613	Auction Theory	4,5 CR	Ehrhart				
T-WIWI-108880	Blockchains & Cryptofinance	4,5 CR	Schuster, Uhrig- Homburg				
T-WIWI-109941	eFinance: Information Systems for Securities Trading	4,5 CR	Weinhardt				
T-WIWI-107501	Energy Market Engineering	4,5 CR	Weinhardt				
T-WIWI-107503	Energy Networks and Regulation	4,5 CR	Weinhardt				
T-WIWI-102614	Experimental Economics	4,5 CR	Weinhardt				
T-WIWI-107504	Smart Grid Applications	4,5 CR	Weinhardt				

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The students

- know the design criterias of market mechanisms and the systematic approach to create new markets,
- understand the basics of the mechanism design and auction theory,
- analyze and evaluate existing markets regarding the missing incentives and the optimal solution of a given market mechanism, respectively,
- develop solutions in teams.

Prerequisites

The course Market Engineering: Information in Institutions [2540460] is compulsory and must be examined.

Content

This module explains the dependencies between the design von markets and their success. Markets are complex interaction of different institution and participants in a market behave strategically according to the market rules. The development and the design of markets or market mechanisms has a strong influence on the behavior of the participants. A systematic approach and a thorough analysis of existing markets is inevitable to design, create and operate a market place successfully. the approaches for a systematic analysis are explained in the mandatory course *Market Engineering* [2540460] by discussing theories about mechanism design and institutional economics. The student can deepen his knowledge about markets in a second course.

Recommendation

None

Annotation

The course "Computational Economics" [2590458] will not be offered any more in this module from winter term 2015/2016 on. The examination will be offered latest until summer term 2016 (repeaters only).

Workload

6.134 Module: Marketing Management [M-WIWI-101490]

Responsible: Organisation: Part of:

: Prof. Dr. Martin Klarmann

KIT Department of Economics and Management

f: Economics and Management (Betriebswirtschaftslehre)

Credits	Recurrence	Duration	Language	Level	Version
9	Each summer term	1 semester	German/English	4	11

Election block: Wahlpflichtangebot (at least 1 item)					
T-WIWI-107720 Market Research 4,5 CR Klarmann					
T-WIWI-102883 Pricing 4,5 CR Feurer					
T-WIWI-109864	T-WIWI-109864 Product and Innovation Management 3 CR Klarmann				
Election block: Ergä	nzungsangebot (at most 1 item)				
T-WIWI-106137	Country Manager Simulation	1,5 CR	Feurer		
T-WIWI-102835	Marketing Strategy Business Game	1,5 CR	Klarmann		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. For passing the module exam in every singled partial exam the respective minimum requirements has to be achieved.

When every singled examination is passed, the overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- have an advanced knowledge about central marketing contents
- have a fundamental understanding of the marketing instruments
- know and understand several strategic concepts and how to implement them
- are able to implement their extensive marketing knowledge in a practical context
- know several qualitative and quantitative approaches to prepare decisions in Marketing
- have the theoretical knowledge to write a master thesis in Marketing
- have the theoretical knowledge to work in/together with the Marketing department

Prerequisites

None

Content

The aim of this module is to deepen central marketing contents in different areas. Therefore the students can choose between the following marketing courses:

- Product and Innovation Management
- Market Research this course has to be completed successfully by students interested in seminar or master thesis positions at the chair of marketing
- Marketing Strategy Business Game
- Country Manager Simulation

Annotation

Please note that only one of the listed 1,5-ECTS courses can be chosen in the Marketing Management module.

Workload

The total workload for this module is approximately 270 hours.

6.135 Module: Mathematical Programming [M-WIWI-101473] Μ

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- names and describes basic notions for advanced optimization methods, in particular from continuous and mixed integer programming,
- knows the indispensable methods and models for quantitative analysis,
- models and classifies optimization problems and chooses the appropriate solution methods to solve also challenging optimization problems independently and, if necessary, with the aid of a computer,
- validates, illustrates and interprets the obtained solutions,
- identifies drawbacks of the solution methods and, if necessary, is able to makes suggestions to adapt them to practical • problems.

Prerequisites

At least one of the courses "Mixed Integer Programming I", "Parametric Optimization", "Convex Analysis", "Nonlinear Optimization I" and "Global Optimization I" has to be taken.

Content

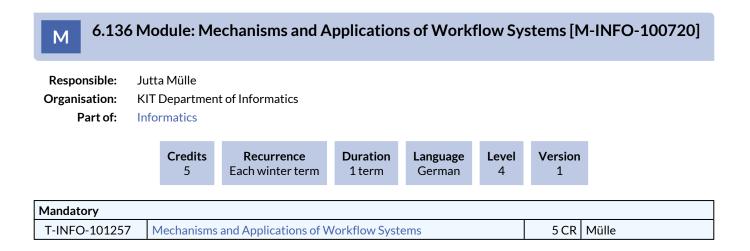

The modul focuses on theoretical foundations as well as solution algorithms for optimization problems with continuous and mixed integer decision variables.

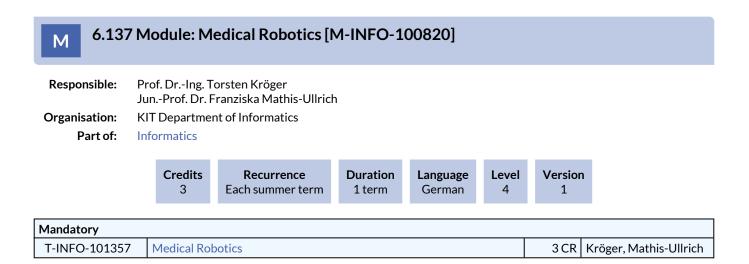

Annotation

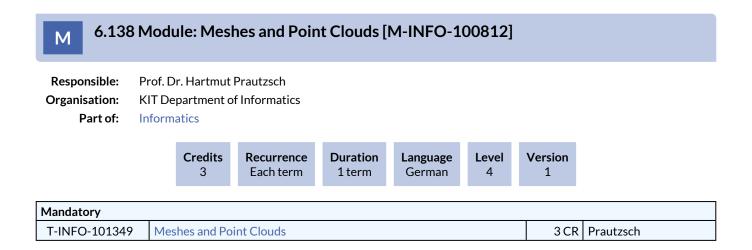

The lectures are partly offered irregularly. The curriculum of the next three years is available online (www.ior.kit.edu).

For the lectures of Prof. Stein a grade of 30 % of the exercise course has to be fulfilled. The description of the particular lectures is more detailed.

Workload

6.139 Module: Microeconomic Theory [M-WIWI-101500]

 Responsible:
 Prof. Dr. Clemens Puppe

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot (at least 9 credits)				
T-WIWI-102609	Advanced Topics in Economic Theory	4,5 CR	Mitusch	
T-WIWI-102861	Advanced Game Theory	4,5 CR	Ehrhart, Puppe, Reiß	
T-WIWI-102859	Social Choice Theory	4,5 CR	Puppe	
T-WIWI-102613	Auction Theory	4,5 CR	Ehrhart	
T-WIWI-105781	Incentives in Organizations	4,5 CR	Nieken	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- are able to model practical microoeconomic problems mathematically and to analyze them with respect to positive and normative questions,
- understand individual incentives and social outcomes of different institutional designs.

An example of a positive question is: which regulation policy results in which firm decistions under imperfect competition? An example of a normative question is: which voting rule has appealing properties?

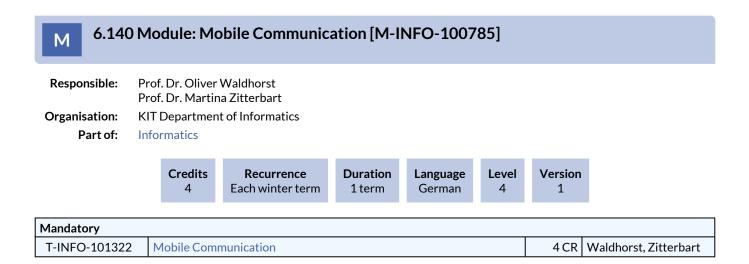

Prerequisites

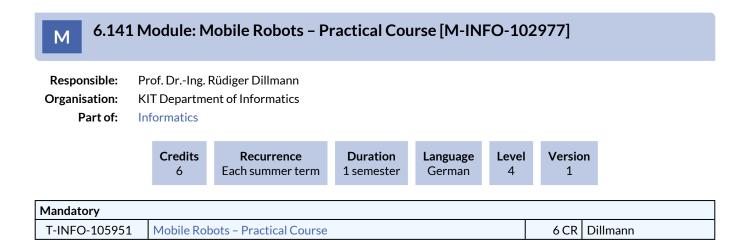

None

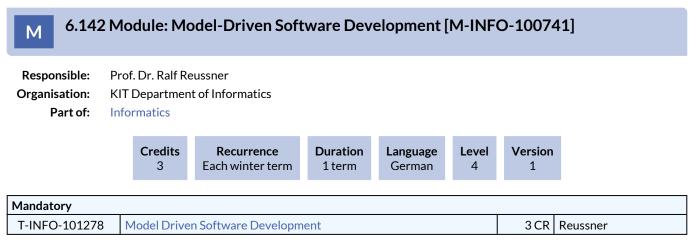

Content

The student should gain an understanding of advanced topics in economic theory, game theory and welfare economics. Core topics are, among others, strategic interactions in markets, cooperative and non-cooperative bargaining (Advanced Game Theory), allocation under asymmetric information and general equilibrium over time (Advanced Topics in Economic Theory), voting and the aggregation of preferences and judgements (Social Choice Theory).

M 6.144 Module: Module Master Thesis [M-WIWI-104833]

Responsible:	Studiendekan der KIT-Fakultät für Informatik Studiendekan der KIT-Fakultät für Wirtschaftswissenschaften
0	KIT Department of Economics and Management Master Thesis

Mandatory				
T-WIWI-103142	Master Thesis	30 CR	Studiendekan der KIT- Fakultät für Informatik, Studiendekan der KIT- Fakultät für Wirtschaftswissenschaften	

Competence Certificate

Examination by two examiners from the two faculties. For details refer to examination regulation. The examiner has to be involved in the degree programme. Involved in the degree programme are the persons that coordinate a module or a lecture of the degree programme.

Competence Goal

The student can independently handle a complex and unfamiliar subject based on scientific criteria and the current state of research.

He/she is in a position to critically analyze and structure the researched information as well as derive principles and regularities. He/she knows how to apply the thereby achieved results to solve the task at hand. Taking into account this knowledge and his/her interdisciplinary knowledge, he/she can draw own conclusions, derive improvement potentials, propose and implement sciencebased decisions.

This is basically also done under consideration of social and/or ethical aspects.

He/she can interpret, evaluate and if required, graphically present the obtained results.

He/she is in a position to sensibly structure a research paper, document results and clearly communicate the results in scientific form.

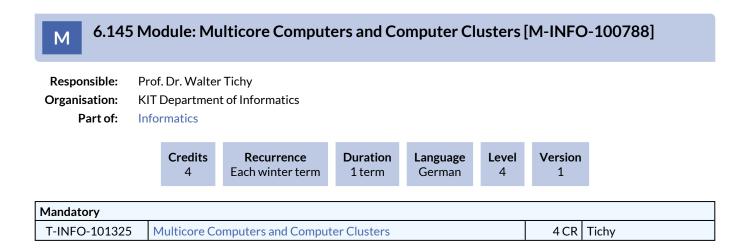

Prerequisites

Regulated in \$14 of the examination regulation.

Content

- The master thesis shows that the candidate can autonomously investigate a problem from his discipline with scientific methods according to the state-of-the-art of the discipline within a specified time period.
- The master thesis can be written in German or English.
- The topic of a master thesis can be accepted or chosen by each of the examiners according to examination regulation. The examiner accepting a topic for a master thesis acts as the first supervisor of this thesis.
- Writing a master thesis with a supervisor who is not a member of the two faculties participating in the degree programme (Departement of Informatics, Department of Economics and Management) requires acceptance by the examination board of the degree programme. The candidate must have an opportunity to make suggestions for the topic of the master thesis.
- Candidates can write a master thesis in teams. However, this requires that the contribution and performance of each candidate to the thesis is identifiable according to objective criteria which allow a unique delineation of each candidate's contribution. The contribution of each candidate regarded in isolation must fulfill the requirements a individual master thesis.
- In exceptional cases and upon request of the candidate, the chairman of the examination board chooses a supervisor and requests that this supervisor provides the candidate with a topic for the master thesis within 4 weeks after the request. In this case, the candidate is informed by the chairman of the examination board about the topic selected.
- Topic, specification of research tasks and the volume of the master thesis should be limited by the supervisor, so that the master thesis can be written with the assigned workload of 30 credits (750-900h).
- The master thesis must contain the following declaration of the candidate: "I truthfully assure that I have autonomously written this master thesis. I have quoted all sources used precisely and completely. I have labelled everything which has been taken from the work of others with or without change." A master thesis without this declaration will not be accepted.
- The date of the assignment of the topic to a candidate as well as the date of delivery of the master thesis should be registered at the examination board. The candidate can return a topic for the master thesis only one time and only within a period of two month after he has received the topic. Upon a request of the candidate with reasons supporting an extension, the examination board may extend the deadline for the delivery of the master thesis by a maximum of three months. A master thesis not delivered within time is graded as "fail" except when the candidate is not responsible for this delay (e.g. protection of motherhood).
- The master thesis is reviewed and graded by the supervisor and the additional examiner. The team of supervisor and examiner must represent both faculties participating in the degree programme (Department of Informatics, Department of Economics and Management). At least one of the two must be professor or junior professor. If the grades of the supervisor and the examiner differ, the examination board sets the mark within this limit.
- Reviewing and grading should be done within 8 weeks after delivery of the master thesis.

Workload

6.146 Module: Multicore Programming in Practice: Tools, Models, Languages [M-INFO-100985]

Organisation:	KIT Department of Informatics
Part of:	Informatics

Mandatory				
T-INFO-106278	Multi-Dimensional Signal Processing and Image Exploitation with Graphic Cards and Other Manycore-Processors	3 CR	Beyerer, Perschke	

Competence Goal

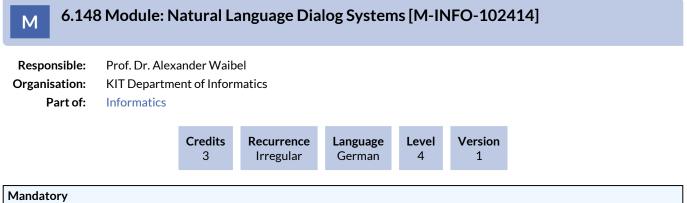

The student will gain an overview about the current parallel hardware architectures, which can be used for solving image processing problems. They will be able to analyse, parallelize and optimize image processing algorithms with respect to different hardware platforms. The introduction into OpenCL will give them the ability to implement the algorithms on graphic cards and multi-core processors.

Content

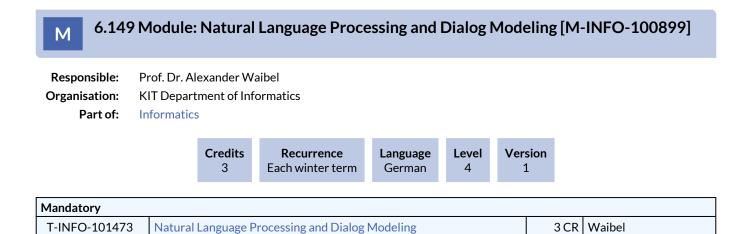

. . .

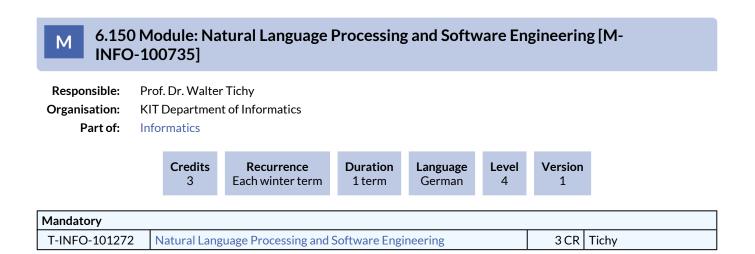

The lecture will give an overview about the different forms of parallelism of an algorithm and the corresponding mapping on hardware architectures. It will introduce the different layouts of the hardware architectures and the different programming models.

To allow for a common programming model for both graphic cards and multi-core processors, the introduction into OpenCL will be very detailed. The OpenCL programming model, the API and the OpenCL C language will be explained. For an optimized use of OpenCL it is mandatory to understand the underlying memory model in all its details. With tutorials during the lecture the, students will get the opportunity to implement image processing algorithms on different architectures and optimize them accordingly. A graphic card and a Xeon-Phi accelerator board will be provided.

T-WIWI-100007	Transport Economics	4,5 CR	Mitusch, Szimba
T-WIWI-102609	Advanced Topics in Economic Theory	4,5 CR	Mitusch
T-WIWI-102712	Regulation Theory and Practice	4,5 CR	Mitusch
T-WIWI-102713	Telecommunication and Internet Economics	4,5 CR	Mitusch

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module.

The exams are offered at the beginning of the recess period about the subject matter of the latest held lecture. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately.

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The students

- have acquired the basic knowledge for a future job in a network company or in a regulatory agency, ministry etc.
- recognize the specific characterizations of network sectors, know fundamental methods for an economic analysis of network sectors and recognize the interfaces for an interdisciplinary cooperation of economists, engineers and lawyers
- understand the interactions between infrastructures, control systems, and the users of networks, especially concerning their implications on investments, price setting and competitive behavior, and they can model or simulate exemplary applications
- can assess the necessity of regulation of natural monopolies and identify regulatory measures that are important for networks.

Prerequisites

None

Content

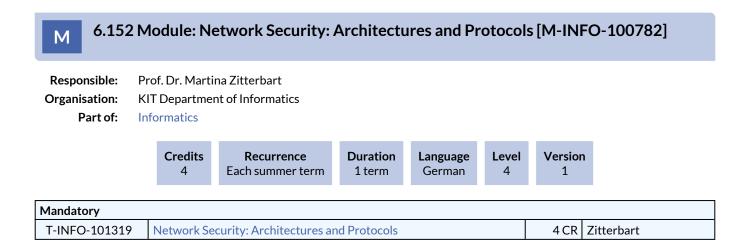

The module is concerned with network or infrastructure industries in the economy, e.g. telecommunication, traffic and energy sectors. These sectors are characterized by close interdependencies of operators and users of infrastructure as well as on states. States intervene in various forms, by the public and regulation authorities, due to the importance of network industries and due to limited abilities of markets to work properly in these industries. The students are supposed to develop a broad knowledge of these sectors and of the political options available.

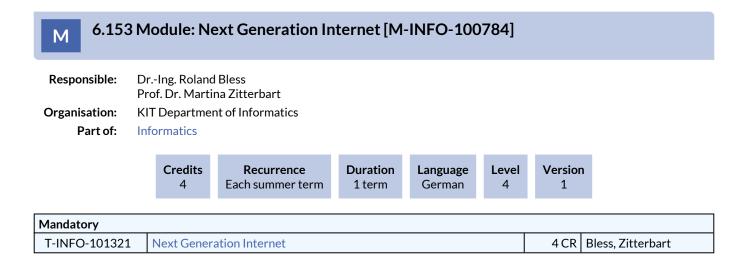

Recommendation

Basics of microeconomics obtained within the undergraduate programme (B.Sc) of economics are required.

Workload

The total workload for this module is approximately 270 hours. For further information see German version.

T-WIWI-102704	Facility Location and Strategic Supply Chain Management	4,5 CR	Nickel
T-WIWI-102714	Tactical and Operational Supply Chain Management	4,5 CR	Nickel

Competence Certificate

The assessment is carried out as partial exams (according to § 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module.

The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- is familiar with basic concepts and terms of Supply Chain Management,
- knows the different areas of SCM and their respective optimization problems,
- is acquainted with classical location problem models (in planes, in networks and discrete) as well as fundamental methods for distribution and transport planning, inventory planning and management,
- is able to model practical problems mathematically and estimate their complexity as well as choose and adapt appropriate solution methods.

Prerequisites

At least one of the courses "Operations Research in Supply Chain Management", "Graph Theory and Advanced Location Models", "Modeling and OR-Software: Advanced Topics" and "Special Topics of Stochastic Optimization (elective)" has to be taken.

Content

Supply Chain Management is concerned with the planning and optimization of the entire, inter-company procurement, production and distribution process for several products taking place between different business partners (suppliers, logistics service providers, dealers). The main goal is to minimize the overall costs while taking into account several constraints including the satisfaction of customer demands.

This module considers several areas of SCM. On the one hand, the determination of optimal locations within a supply chain is addressed. Strategic decisions concerning the location of facilities as production plants, distribution centers or warehouses are of high importance for the rentability of Supply Chains. Thoroughly carried out, location planning tasks allow an efficient flow of materials and lead to lower costs and increased customer service. On the other hand, the planning of material transport in the context of supply chain management represents another focus of this module. By linking transport connections and different facilities, the material source (production plant) is connected with the material sink (customer). For given material flows or shipments, it is considered how to choose the optimal (in terms of minimal costs) distribution and transportation chain from the set of possible logistics chains, which asserts the compliance of delivery times and further constraints. Furthermore, this module offers the possibility to learn about different aspects of the tactical and operational planning level in Suppy Chain Mangement, including methods of scheduling as well as different approaches in procurement and distribution logistics. Finally, issues of warehousing and inventory management will be discussed.

Recommendation

Basic knowledge as conveyed in the moduleIntroduction toOperations Research[WI1OR] is assumed.

Annotation

Some lectures and courses are offered irregularly.

The planned lectures and courses for the next three years are announced online.

Workload

Total effort for 9 credits: ca. 270 hours

T-INFO-109577	Practical Course: Hot Research Topics in Computer Graphics	6 CR	Dachsbacher

Competence Goal

Students study scientific publications on currently hot topics of computer graphics, implement and evaluate state of the art methods, and compare them to newly developed approaches. The results of the practical course will be documented in the form of a scientific paper.

Content

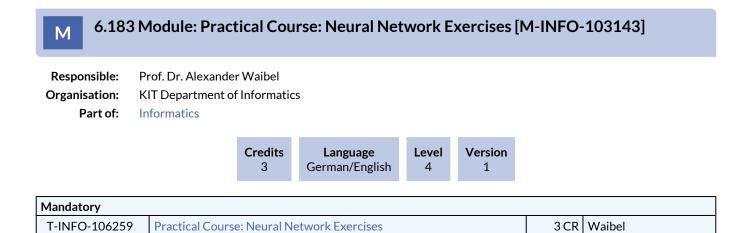

Students in this practical course are introduced to theoretical and practical aspects of current research topics at the chair of computer graphics.

T-INFO-106417	Practical Course: Virtual Neurorobotics in the Human Brain Project	3 C R	Dillmann

Competence Goal

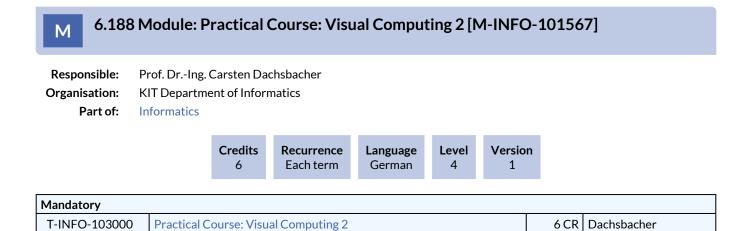

- Students understand the basic of neuroscience, neuro-robotics and neuro-informatics
- Students are able to model functional networks of artificial spiking neurons for robot control.
- They are familiar with neural and physical simulation environments (especially the simulator developed in the Human Brain Project) and can design and conduct scientific experiments within.

Content

In this practical course, students have the opportunity to discover the field of neurorobotics within the context of the "Human Brain Project". The course will cover the concepts of virtual neurorobotics ranging from modelling networks of artificial spiking neurons to design of adequate experiments for training and evaluation in a simulation environments.

T-INFO-101314	Tax Law II	3 C R	Dietrich, Dreier		
T-INFO-101316	Law of Contracts	3 CR	Dreier		

Competence Goal

The student

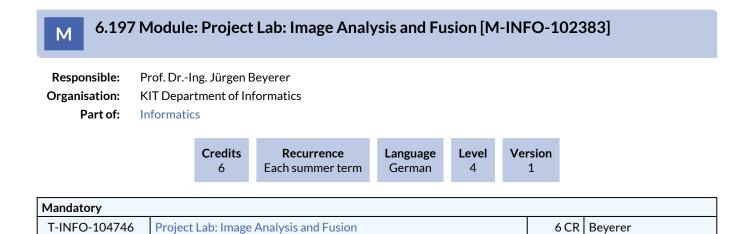

- has gained in-depth knowledge of German company law, commercial law and civil law;
- is able to analyze, evaluate and solve complex legal and economic relations and problems;
- is well grounded in individual labour law, collective labour law and commercial constitutional law, evaluates and critically assesses clauses in labour contracts;
- recognizes the significance of the parties to collective labour agreements within the economic system and has
 differentiated knowledge of labour disputes law and the law governing the supply of temporary workers and of social law;
- possesses detailed knowledge of national earnings and corporate tax law and is able to deal with provisions of tax law in a scientific manner and assesses the effect of these provisions on corporate decision-making.

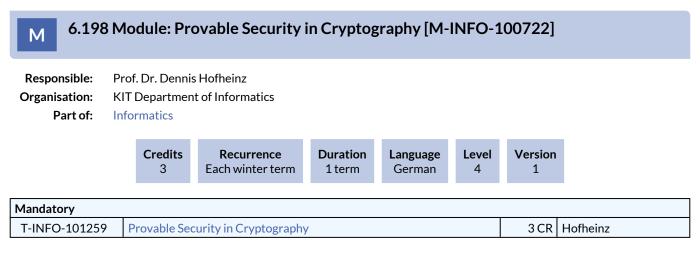

Prerequisites

None

Content

The module provides the student with knowledge in special matters in business law, like employment law, tax law and business law, which are essential for managerial decisions.

Prerequisites

None

Mandatory			
T-INFO-101258	Reconfigurable and Adaptive Systems	3 C R	Henkel

6.205 Module: Reinforcement Learning and Neural Networks in Robotics [M-INFO-104894]

Responsible:	Prof. DrIng. Torsten Kröger DrIng. Pascal Meißner	
Organisation:	KIT Department of Informatics	
Part of:	Informatics	

Mandatory			
T-INFO-109928	Reinforcement Learning and Neural Networks in Robotics	3 C R	Meißner

Competence Goal

You will get familiar with state-of-the-art data-driven representations and algorithms for controlling stationary and mobile robots. The first part covers basic concepts of Supervised and Imitation Learning of Deep Neural Networks by means of optimization techniques. In doing so, we dedicate an entire lecture to the practical application of networks in robotics. The second part expands on various approaches to Reinforcement Learning. Accompanying the lecture, we discuss case-studies from Robotics research.

Course objectives:

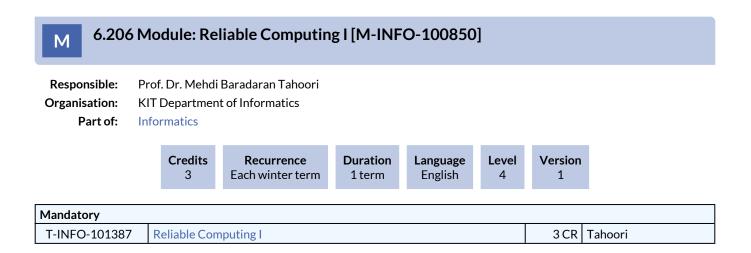

- Successful participants will have a basic understanding of Machine Learning and of the mathematical optimization techniques (gradient-based methods), used in this context.

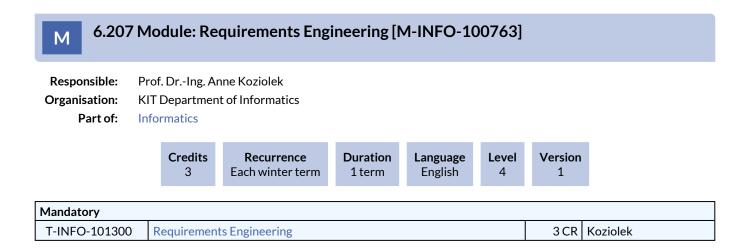

- Successful participants will understand representations (Feed-Forward and Recurrent Networks) and algorithms (Backpropagation) in Deep Supervised and Imitation Learning. They will be able to deploy them on problems which are related to learning robot behaviors.

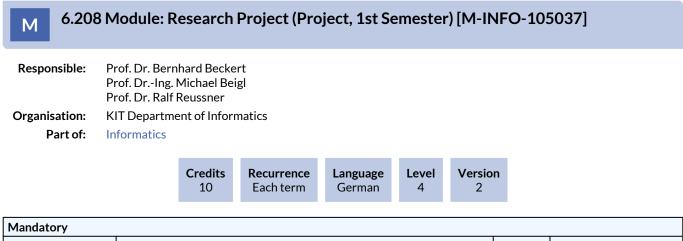

- Successful participants will gain a comprehensive insight in the terminology of Reinforcement Learning, its stochastic foundations (MDP), model-free learning methods (MC, TD, SARSA, Q-), policy-gradient approaches (Actor-Critic, TRPO, PPO) and model-based approaches (global and local models). On that basis, successful participants can develop solutions to learn robot motor skills.

Content

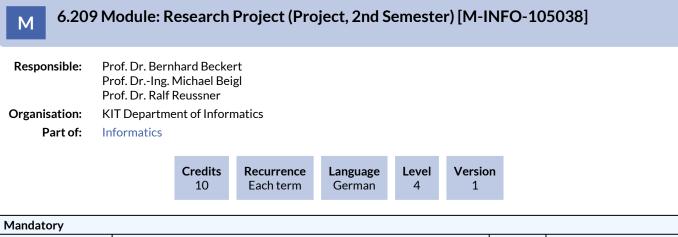

- Introduction and Foundations of Machine Learning
- Optimization for Machine Learning
- (Deep) Supervised Learning Introduction
- Guest Lecture Innovative Practical Applications
- (Deep) Imitation Learning Introduction
- (Deep) Reinforcement Learning Introduction
- Markov Decision Processes and Dynamic Programming
- Monte-Carlo Learning and Time Difference
- Basic Policy Gradients
- Advanced Policy Gradients
- Model-based Reinforcement Learning

T-INFO-110221	Research Project (Project, 2nd Semester) - Oral Exam	3 C R	Beckert
T-INFO-110222	Research Project (Project, 2nd Semester) - Presentation	3 CR	Beckert
T-INFO-110223	Research Project (Project, 2nd Semester) - Scientific Report	4 CR	Beckert

Competence Goal

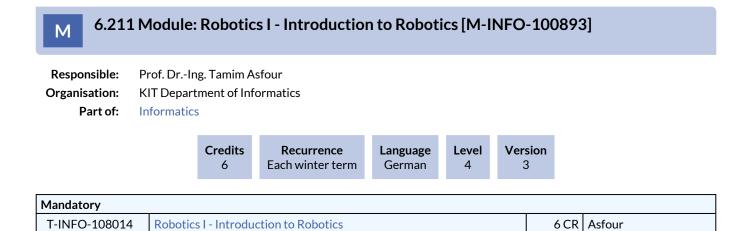

The student knows concrete solutions for different problems in robotics. He/she uses methods of inverse kinematics, grasp and motion planning, and visual perception. The student can implement solutions in the programming language C++ with the help of suitable software frameworks.

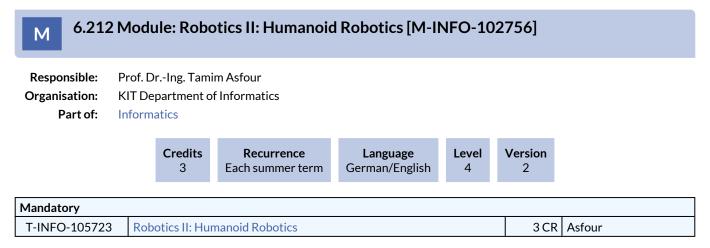

Content

The practical course is offered as an accompanying course to the lectures Robotics I-III. Every week, a small team of students will work on solving a given robotics problem. The list of topics includes robot modeling and simulation, inverse kinematics, robot programming via statecharts, collision-free motion planning, grasp planning, and robot vision.

Recommendation

Should have attended the lectures Robotics I - III, and Mechano-Informatics and Robotics.

Competence Goal

The students have an overview of current research topics in autonomous learning robot systems using the example of humanoid robotics. They are able to classify and evaluate current developments in the field of cognitive humanoid robotics.

The students know the essential problems of humanoid robotics and are able to develop solutions on the basis of existing research.

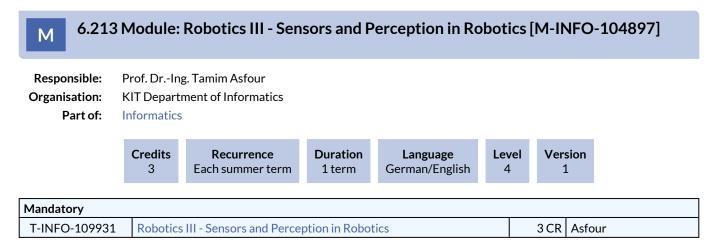

Prerequisites

None

Content

The lecture presents current work in the field of humanoid robotics that deals with the implementation of complex sensorimotor and cognitive abilities. In the individual topics different methods and algorithms, their advantages and disadvantages, as well as the current state of research are discussed.

The topics addressed are: biomechanical models of the human body, biologically inspired and data-driven methods of grasping, active perception, imitation learning and programming by demonstration as well as semantic representations of sensorimotor experience

Competence Goal

Students know the main sensor principles used in robotics and understand the data flow from physical measurement through digitization to the use of the recorded data for feature extraction, state estimation and environmental modeling.

Students are able to propose and justify suitable sensor concepts for common tasks in robotics.

Content

The lecture supplements the lecture Robotics I with a broad overview of sensors used in robotics. The lecture focuses on visual perception, object recognition, simultaneous localization and mapping (SLAM) and semantic scene interpretation. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A basic distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive).

The second part of the lecture concentrates on the use of exteroceptive sensors in robotics. The topics covered include tactile exploration and visual data processing, including advanced topics such as feature extraction, object localization, simultaneous localization and mapping (SLAM) and semantic scene interpretation.

6.214 Module: Sales Management [M-WIWI-101487]

 Responsible:
 Prof. Dr. Martin Klarmann

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Economics and Management (Betriebswirtschaftslehre)

Election notes

The courses "Business Planning for Founders - EUCOR" and the course "International Selling - EUCOR" must be taken together.

Mandatory					
T-WIWI-102890	Sales Management and Retailing	3 CR	Klarmann		
Election block: Ergä	Election block: Ergänzungsangebot (at most 1 item)				
T-WIWI-106137	Country Manager Simulation	1,5 CR	Feurer		
T-WIWI-106981	Digital Marketing and Sales in B2B	1,5 CR	Konhäuser		
T-WIWI-110389	Business Planning for Founders - EUCOR	3 CR	Terzidis

Election block: Ergänzungsangebot (at most 2 items)					
T-WIWI-107720	Market Research	4,5 CR	Klarmann		
T-WIWI-102883	Pricing	4,5 CR	Feurer		

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course

Competence Goal

Students

- have an advanced knowledge about sales management (design and structure of sales systems, relationship with sales partners and important customers)
- have a fundamental understanding of price management (in particular consumer behavior of pricing, pricing strategy, price determination)
- are able to handle particularities and challenges in sales management
- know several qualitative and quantitative approaches to prepare decisions in Marketing
- are able to implement their extensive sales and pricing knowledge in a practical context
- have the theoretical knowledge to write a master thesis in Marketing
- have the theoretical knowledge to work in/together with the sales department

Prerequisites

The course "Sales Management and Retailing" is compulsory.

Content

The aim of the module is to deepen the sales management knowledge of the students. Theoretical approaches often have a combined view on marketing and sales, whereas in practical surroundings the sales department is completely separated from the marketing tasks. Given this fact, we concentrate on pure sales management topics and address different facets of the sales management.

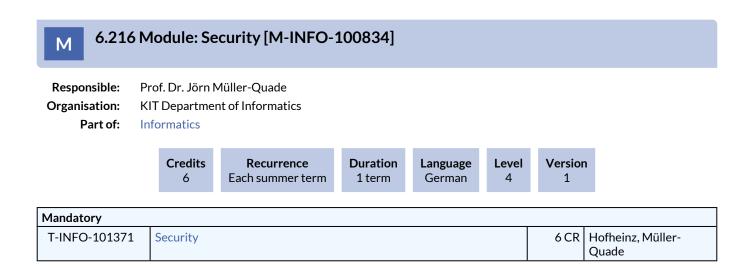

Annotation

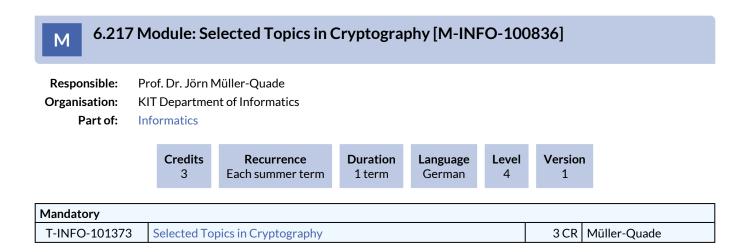

For further information please contact the Marketing and Sales Research Group (marketing.iism.kit.edu).

Workload

The total workload for this module is approximately 270 hours. For further information see German version.

6.215 Module: Secure Multiparty Computation [M-INFO-104119] Μ **Responsible:** Prof. Dr. Jörn Müller-Quade Organisation: KIT Department of Informatics Part of: Informatics Credits Version Level Language 3 German 4 1 Mandatory T-INFO-108540 Secure Multiparty Computation 3 CR Müller-Quade

 Part of:
 Informatics

Election block: Wahlpflichtangebot (at least 2 items)				
T-WIWI-110548	Advanced Lab Informatics (Master)	4,5 CR	Professorenschaft des Fachbereichs Informatik	
T-WIWI-102874	Semantic Web Technologies	4,5 CR	Sure-Vetter	
T-WIWI-103112	Web Science	4,5 CR	Sure-Vetter	

Competence Certificate

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- understands the koncepts behind Semantic Web and Linked Data technologies
- develops ontologies to be employed in semantic web-based applications and chooses suitable representation languages,
- is familiar with approaches in the area of knowledge representation and modelling,
- is able to transfer the methods and technologies of semantic web technologies to new application sectors,
- evaluates the potential of semantic web for new application sectors,
- understands the challenges in the areas of Data and system integration on the web is able to develop solutions.

Prerequisites

None

Content

The module Semantic Technologies covers the basics, methods and applications for intelligent systems in the World Wide Web. Fundamental to this are the scalable provision of knowledge, the provision of data as linked data, and methods for analyzing networks.Formal basics and practical aspects such as knowledge modelling and available tools for representation languages for ontologies are dealt with in detail. Methods for implementing intelligent systems on the World Wide Web will also be clarified and applications such as Web 2.0 or Service Science will be discussed and evaluated.Furthermore, methods for network analysis and the resulting findings are taught. These findings can be used to design recommendation systems and explain social networking phenomena. A variety of procedures exist to identify patterns that, if interpreted valuable, may provide previously unknown insights. This information can be predictive or descriptive.

Workload

The total workload for this module is approximately 270 hours.

6.219 Module: Seminar Information Systems [M-WIWI-104815]

Responsible:	Studiendekan der KIT-Fakultät für Informatik Studiendekan der KIT-Fakultät für Wirtschaftswissenschaften	
Organisation:	KIT Department of Economics and Management	
Part of:	Seminars	

Mandatory			
T-WIWI-109827	Seminar in Information Systems (Master)	3 CR	Studiendekan der KIT- Fakultät für Informatik, Studiendekan der KIT- Fakultät für Wirtschaftswissenschaften

Competence Certificate

The assessment is done by a seminar with at least 3 CP.

The assessment of the seminar (following §4(2), 3 ER) is described at the course description.

Competence Goal

- Students are able to independently deal with a defined problem in a specialized field based on scientific criteria.
- They are able to research, analyze the information, abstract and derive basic principles and regularities from unstructured information.
- They can solve the problems in a structured manner using their interdisciplinary know-how.
- They know how to validate the obtained results.
- Finally, they are able to logically and systematically present the results both orally and in written form in accordance with scientific guidelines (structuring, technical terminology, referencing). They can argue and defend the results professionally in the discussion.

Prerequisites

None.

Content

The module consists of a seminar, that is related to the research field of economic sciences. A complete list of available seminars is published in the internet.

Annotation

The mentioned seminars in this module handbook are place holders. For each semester, a complete list of seminars are published in the Vorlesungsverzeichnis or at the web pages of the participating institutes. Often, the seminar topics for a given semester are published at the end of the preceding semester. Some seminars require an early sign-in deadline at the end of the of the preceding semester.

Workload

The total workload for this module is approximately 90 hours.

T-WIWI-105778	Service Analytics A	4,5 CR	Fromm
T-WIWI-109940	Special Topics in Information Systems	4,5 CR	Weinhardt

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- knows the theoretical bases and the key components of Business Intelligence systems,
- acquires the basic skills to make use of business intelligence and analytics software in the service context
- are introduced into various application scenarios of analytics in the service context
- are able to distinguish different analytics methods and apply them in context
- learn how to apply analytics software in the service context
- are trained for the structured compilation and solution of practice relevant problems with the help of commercial business intelligence software packages as well as analytics methods and tools

Prerequisites

None

Content

The importance of services in modern economies is most evident – nearly 70% of gross value added are achieved in the tertiary sector and a growing number of industrial enterprises add customer specific services to their material goods or transform their business models fundamentally. The growing availability of data "Big Data" and their intelligent processing by applying analytic methods and business intelligence systems plays a key role.

It is the goal of the module to give students a comprehensive overview on the subject Business Intelligence & Analytics focusing on service issues. Various scenarios illustrate how the methods and systems introduced help to improve existing services or create innovative data-based services.

Recommendation

The course Service Analytics A [2595501] should be taken.

Annotation

This module is part of the KSRI teaching profile "Digital Service Systems". Further information on a service-specific profiling is available under www.ksri.kit.edu/teaching.

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO), whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- demonstrates basic competency in the areas of data and system integration on the web
- learn new Web-based architectures and applications, as well as concepts related to Web 2.0, Cloud Computing and Semantic Web
- know the different machine learning procedures for the supervised as well as the unsupervised learning
- learn methods regarding network theory and network analysis

Prerequisites

None.

Content

Services can be considered from different perspectives. Computer Science considers Services and Web Services traditionally as a piece of software, which fulfills a specific task. By the permanent rise of Cloud Applications, these services become more important. The offered Services and their functionalities have to be described sufficiently in order to be detectable.

In this module the most important network learning methods are introduced and their applicability is discussed with regard to different information sources

Furthermore, network analysis is presented, as well as architectures and descriptions for Services.

Thereby, the practical usability of the presented methods and algorithms in their particular fields of application are compared.

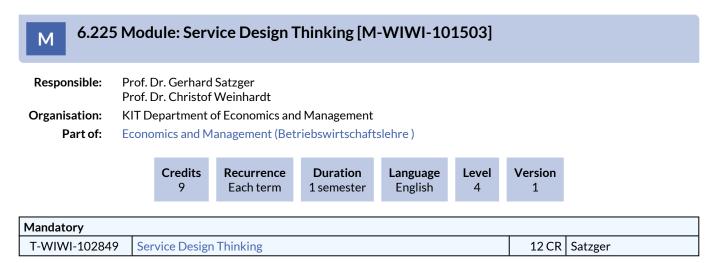

Recommendation

None

Annotation

This module is part of the KSRI teaching profile "Digital Service Systems". Further information on a service-specific profiling is available under www.ksri.kit.edu/teaching.

Workload

Competence Certificate

The assessment is carried out as a general exam (according to Section 4(2), 3 of the examination regulation). The overall grade of the module is the grade of the examination (according to Section 4(2), 3 of the examination regulation).

Competence Goal

- Deep knowledge of the innovation method Design Thinking, as introduced and promoted by Stanford University
- Development of new, creative solutions through extensive observation of oneself and one's environment, in particular with regard to the relevant service users
- Know how to use prototyping and experimentation to visualize one's ideas, to test and iteratively develop them, and to converge on a solution
- Learn to apply the method to a real innovation projects issued by industry partners.

Prerequisites

None

Content

- Paper Bike: Learning about the basic method elements by building a paper bike that has to fulfill a given set of challenges. The bikes will be tested in a race during an international Kick-Off event with other universities of the SUGAR network (intern. Design Thinking network).
- Design Space Exploration: Exploring the problem space through customer and user observation as well as desk research.
- Critical Function Prototype: Identification of critical features from the customer's perspective that can contribute to the solution of the overarching problem. Building and testing prototypes that integrate these functionalities.
- Dark Horse Prototype: Inverting earlier assumptions and experiences, which leads to the inclusion of new features and solutions. Developing radically new ideas are in the focus of this phase.
- Funky Prototype: Integration of the individually tested and successful functions to several complete solution scenarios, which are further tested and developed.
- Functional Prototype: Selection of successful scenarios from the previous phase and building a higher resolution prototype. The final solution to the challenge is lade out in detail and tested with users.
- Final Prototype: Implementing the functional prototype and presenting it to the customer.

Recommendation

This course is held in English – proficiency in writing and communication is required.

Our past students recommend to take this course at the beginning of the masters program.

Annotation

Due to practical project work as a component of the program, access is limited.

The module (as well as the module component) spans two semesters. It starts in September every year and runs until end of June in the subsequent year. Entering the program is only possible at its beginning - after prior application in May/June.

For more information on the application process and the program itself are provided in the module component description and the program's website (http://sdt-karlsruhe.de).

Furthermore, the KSRI conducts an information event for applicants every year in May.

This module is part of the KSRI Teaching Program "Digital Service Systems". For more information see the KSRI Teaching website: www.ksri.kit.edu/teaching.

Workload

The total amount of work for this module is approx. 270 hours (9 credits). The workload for this course is comparably high as the course runs in cooperation with partner universities from around the world as well as partner companies. This causes overhead.

6.226 Module: Service Economics and Management [M-WIWI-102754]

Responsible:	Prof. Dr. Gerhard Satzger Prof. Dr. Christof Weinhardt
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (9 credits)			
T-WIWI-110280 Digital Services: Business Models and Transformation 4,5 CR Satzger			
T-WIWI-106201	Digital Transformation of Organizations	4,5 CR	Mädche
T-WIWI-102640	Market Engineering: Information in Institutions	4,5 CR	Weinhardt

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO), whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- understand the scientific basics of the management of digital services and corresponding systems
- gain a comprehensive insight in the importance and the most important features of information systems as an central component of the digitalization of business processes, products and services
- know the most relevant concepts and theories to shape the digital transformation process of service systems successfully
- understand the OR methods in the sector of service management and apply them adequately
- are able to use large amounts of available data systematically for the planning, operation and improvement of complex service offers and to design and control information systems
- are able to develop market-oriented coordination mechanisms and apply service systems.

Prerequisites

None

Content

This module provides the foundation for the management of digital services and corresponding systems. The courses in this module cover the major concepts for a successful management of service systems and their digital transformation. Current examples from the research and practice enhance the relevance of the discussed topics.

Recommendation

None

Annotation

This module is part of the KSRI teaching profile "Digital Service Systems". Further information on a service-specific profiling is available under www.ksri.kit.edu/teaching.

Workload

6.227 Module: Service Innovation, Design & Engineering [M-WIWI-102806]

Responsible:	Prof. Dr. Alexander Mädche Prof. Dr. Gerhard Satzger
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Betriebswirtschaftslehre)

Election block: Wahlpflichtangebot (9 credits) T-WIWI-105773 **Digital Service Design** 4,5 CR Mädche T-WIWI-102639 Business Models in the Internet: Planning and Implementation 4,5 CR Weinhardt T-WIWI-108437 Practical Seminar: Information Systems and Service Design 4,5 CR Mädche T-WIWI-102799 4,5 CR **Practical Seminar Service Innovation** Satzger T-WIWI-102641 Service Innovation 4,5 CR Satzger

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO), whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- know about the challenges, concepts, methods and tools of service innovation management and are able to use them successfully.
- have a profound comprehension of the development and design of innovative services and are able to apply suitable methods and tools on concrete and specific issues.
- are able to embed the concepts of innovation management, development and design of services into organisations
- are aware of the strategic importance of services, are able to present value creation in the context of services systems and to strategically exploit the possibilities of their digital transformation
- elaborate concrete and problem-solving solutions for practical tasks in teams.

Prerequisites

Dependencies between courses:

The course Practical Seminar Service Innovation cannot be applied in combination with the course Practical Seminar Digital Service Design.

Content

This module is designed to constitute the basis for the development of successful ICT supported innovations thus including the methods and tools for innovation management, for the design and the development of digital services and the implementation of new business models. Current examples from science and practice enhance the relevance of the topics addressed.

Recommendation

Attending the course Practical Seminar Service Innovation [2595477] is recommended in combination with the course Service Innovation [2595468].

Attending the course Practical Seminar Digital Service Design [new] is recommended in combination with the course Digital Service Design [new].

Annotation

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO) of the core course and further single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The students

- understand the basics of developing and managing IT-based services,
- understand and apply OR methods in service management,
- systematically use vast amounts of available data for planning, operation, personalization and improvement of complex service offerings, and
- understand and analyze innovation processes in corporations.

Prerequisites

The course "Digital Services: Business Models and Transformation" is compulsory and must be examined.

Content

The module service management addresses the basics of developing and managing IT-based services. The lectures contained in this module teach the basics of developing and managing IT-based services and the application of OR methods in the field of service management. Moreover, students learn to systematically analyze vast amounts of data for planning, operation and improvement for complex service offerings. These tools enhance operational and strategic decision support and help to analyze and understand the overall innovation processes in corporations. Current examples from research and industry demonstrate the relevance of the topics discussed in this module.

Recommendation

Workload

6.229 Module: Service Operations [M-WIWI-102805]

Responsible:	Prof. Dr. Stefan Nickel
Organisation:	KIT Department of Economics and Management
Part of:	Economics and Management (Operations Research)

Election block: Wahlpflichtangebot (at most 2 items)			
T-WIWI-102718	Discrete-Event Simulation in Production and Logistics	4,5 CR	Nickel
T-WIWI-102884	Operations Research in Health Care Management	4,5 CR	Nickel
T-WIWI-102715	Operations Research in Supply Chain Management	4,5 CR	Nickel
T-WIWI-102716	Practical Seminar: Health Care Management (with Case Studies)	4,5 CR	Nickel
Election block: Ergänzungsangebot (at most 2 items)			
T-WIWI-102872	Challenges in Supply Chain Management	4,5 CR	Mohr

Competence Certificate

The assessment is carried out as partial exams (according to Section 4 (2), 1-3 SPO), whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately. The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- knows the theoretical bases and the key components of Business Intelligence systems,
- acquires the basic skills to make use of business intelligence and analytics software in the service context
- · are introduced into various application scenarios of analytics in the service context
- are able to distinguish different analytics methods and apply them in context
- · learn how to apply analytics software in the service context
- are trained for the structured compilation and solution of practice relevant problems with the help of commercial business intelligence software packages as well as analytics methods and tools

Prerequisites

At least one of the fourcourses Operations Research in Supply Chain Management, Operations Research in Health Care Management, Practical seminar: Health Care Management orDiscrete-Event Simulation in Production and Logistics has to be assigned.

Content

The importance of services in modern economies is most evident – nearly 70% of gross value added are achieved in the tertiary sector and a growing number of industrial enterprises add customer specific services to their material goods or transform their business models fundamentally. The growing availability of data "Big Data" and their intelligent processing by applying analytic methods and business intelligence systems plays a key role.

It is the goal of the module to give students a comprehensive overview on the subject Business Intelligence & Analytics focusing on service issues. Various scenarios illustrate how the methods and systems introduced help to improve existing services or create innovative data-based services.

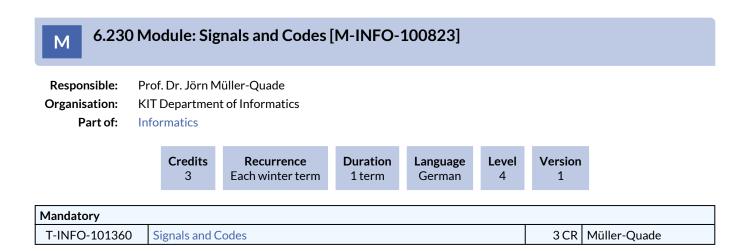

Recommendation

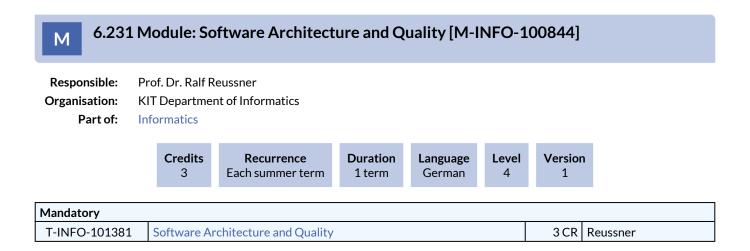

The course Practical Seminar Health Care should be combined with the course OR in Health Care Management.

T-WIWI-106545	Optimization under Uncertainty	4,5 CR	Rebennack		
T-WIWI-110162	Optimization Models and Applications	4,5 CR	Sudermann-Merx		
T-WIWI-106552	Simulation of Stochastic Systems	4,5 CR	Grothe, Rebennack		

Competence Certificate

The assessment is carried out as partial exams (according to § 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module.

The assessment procedures are described for each course of the module seperately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- names and describes basic notions for advanced stochastic optimization methods, in particular, ways to algorithmically exploit the special model structures,
- knows the indispensable methods and models for quantitative analysis of stochastic optimization problems,
- models and classifies stochastic optimization problems and chooses the appropriate solution methods to solve also • challenging stochastic optimization problems independently and, if necessary, with the aid of a computer,
- validates, illustrates and interprets the obtained solutions,
- identifies drawbacks of the solution methods and, if necessary, is able to makes suggestions to adapt them to practical problems.

Prerequisites

At least one of the courses "Advanced Stochastic Optimization" and "Large-scale Optimization" has to be taken.

Content

The module focuses on the modeling as well as the imparting of theoretical principles and solution methods for optimization problems with special structure, which occur for example in the stochastic optimization.

Recommendation

It is recommended to listen to the lecture "Introduction to Stochastic Optimization" before the lecture "Advanced Stochastic Optimization" is visited.

Annotation

The course "Introduction to Stochastic Optimization" will be offered until the summer semester 2019 as an additional option in the elective offer of the module. Thereafter, the course can only be selected in the supplementary offer.

The courses are sometimes offered irregularly. The curriculum, planned for three years in advance, can be found on the Internet at http://sop.ior.kit.edu/28.php.

Workload

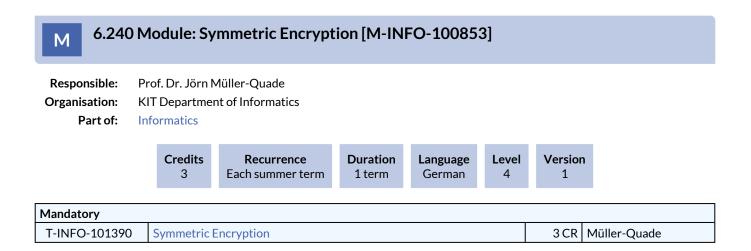

The total workload for this module is approximately 270 hours (9 credits). The allocation is made according to the credit points of the courses of the module. The total number of hours per course is determined by the amount of time spent attending the lectures and exercises, as well as the exam times and the time required to achieve the module's learning objectives for an average student for an average performance.

6.244 Module: Transport Infrastructure Policy and Regional Development [M-WIWI-101485]

Responsible: Prof. Dr. Kay Mitusch

Organisation: KIT Department of Economics and Management

Part of: Economics and Management (Volkswirtschaftslehre)

Election block: Wahlpflichtangebot (2 items)				
T-WIWI-103107	Spatial Economics	4,5 CR	Ott	
T-WIWI-100007	Transport Economics	4,5 CR	Mitusch, Szimba	

Competence Certificate

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The exams are offered at the beginning of the recess period about the subject matter of the latest held lecture. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately. The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The students

- understand the economic issues related to transport and regional development with a main focus on economic policy issues generated by the relationship of transport and regional development with the public sector
- are able to compare different considerations of politics, regulation and the private sector and to analyse and assess the respective decision problems both qualitatively and by applying appropriate methods from economic theory
- are prepared for careers in the public sector, particularly for public companies, politics, regulatory agencies, related consultancies, mayor construction companies or infrastructure project corporations

Prerequisites

None

Content

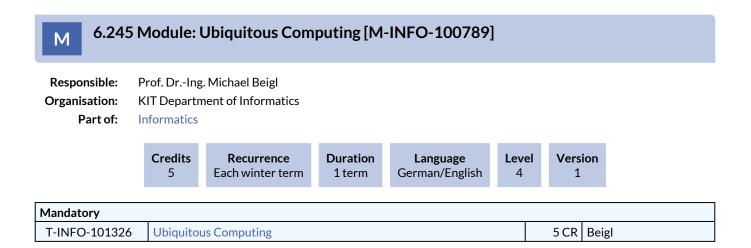

The development infrastructure (e.g. transport, energy, telecommunications) has always been one of the most relevant factors for economic development and particularly influences the development of the regional economy. From the repertoire of state actions, investments into transport infrastructure are often regarded the most important measure to foster regional economic growth. Besides the direct effects of transport policy on passenger and freight transport, a variety of individual economic activities is significantly dependent on the available or potential transport options. Decisions on the planning, financing and realization of mayor infrastructure projects require a solid and far-reaching consideration of direct and indirect growth effects with the occurring costs.

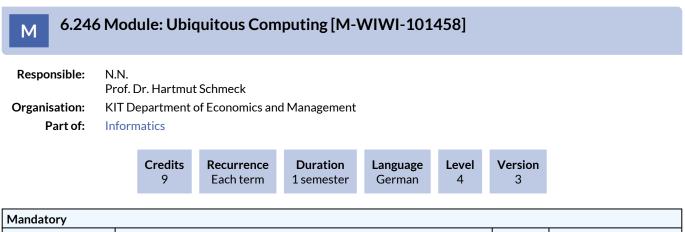

Through its combination of lectures the module reflects the complex interdependencies between infrastructure policy, transport industry and regional policy and provides its participants with a comprehensive understanding of the functionalities of one of the most important sectors of the economy and its relevance for economic policy.

Annotation

The courses Assessment of Public Policies and Projects I (winter term) and Assessment of Public Policies and Projects II (summer term) will no longer be part of this module. Student who have already had exams in this courses can integrate these exams in this module.

Workload

Competence Certificate

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits and truncated after the first decimal.

Competence Goal

The student

- gets comprehensive knowledge about topics in the area of Ubiquitous Computing
- can design and evaluate ubiquitous systems in different application areas
- acquires appropriate knowledge for addressing specialized aspects in the area of ubiquitous computing

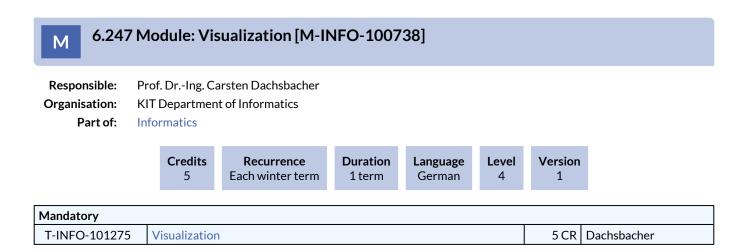

Prerequisites

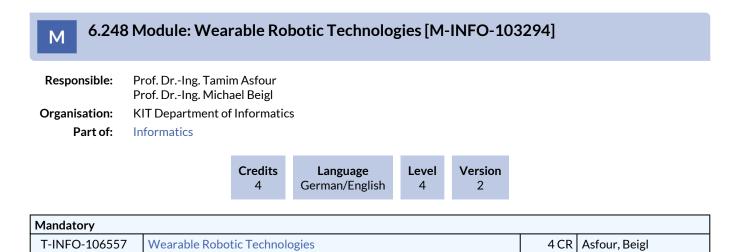

See German version

Content

Ubiquitous information technology (Ubiquitous Computing) addresses the ubiquitous (or pervasive) availability of information processing. The availability of these systems has the objective to facilitate the operational environment in technical scenarios or in daily life of humans and to enrich it with new capabilities. This module provides fundamentals of ubiquitous computing and further topics like network and Internet technologies, security aspects, the analysis of autonomously operating systems in Organic Computing and also the utilisation of information and communication technologies in highly decentralized energy systems.

Workload

Competence Goal

The students have received fundamental knowledge about wearable robotic technologies and understand the requirements for the design, the interface to the human body and the control of wearable robots. They are able to describe methods for modelling the human neuromusculoskeletal system, the mechatronic design, fabrication and composition of interfaces to the human body. The students understand the symbiotic human-machine interaction as a core topic of Anthropomatics and have knowledge of state of the art examples of exoskeletons, ortheses and protheses.

Content

The lecture starts with an overview of wearable robot technologies (exoskeletons, prostheses and ortheses) and its potentials, followed by the basics of wearable robotics. In addition to different approaches to the design of wearable robots and their related actuator and sensor technology, the lecture focuses on modeling the neuromusculoskeletal system of the human body and the physical and cognitive human-robot interaction for tightly coupled hybrid human-robot systems. Examples of current research and various applications of lower, upper and full body exoskeletons as well as prostheses are presented.

6.250 Module: Web Data Management [M-WIWI-101455]

 Responsible:
 Prof. Dr. York Sure-Vetter

 Organisation:
 KIT Department of Economics and Management

 Part of:
 Informatics

Mandatory					
T-WIWI-102874	Semantic Web Technologies	4,5 CR	Sure-Vetter		
Election block: Ergänzungsangebot (between 4 and 5 credits)					
T-WIWI-110548	Advanced Lab Informatics (Master)	4,5 CR	Professorenschaft des Fachbereichs Informatik		
T-WIWI-103112	Web Science	4,5 CR	Sure-Vetter		

Competence Certificate

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits and truncated after the first decimal.

Competence Goal

Students

- develop ontologies for semantic web technologies und choose suitable representation languages,
- are able to provide data and applications via a cloud-based infrastructure
- transfer the methods and technologies of semantic web technologies and cloud computing to new application sectors,
- evaluate the potential of semantic web technologies and the cloud computing approaches for new application sectors.

Prerequisites

The lecture Semantic Web Technologies [2511310] is obligatory and has to be absolved.

Content

The module Web Data Management covers the basic principles, methods and applications for intelligent systems in the World Wide Web. Cloud Services are essential for the decentralized, scalable provision of data and applications as well as the methods of semantic web based on the description of data and services via metadata in form of so called ontologies.

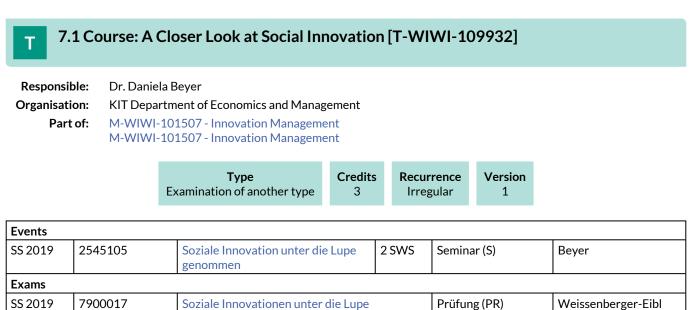

Formal principles and practical aspects such as knowledge modeling and available representation language tools for ontologies are covered in detail. Methods for the realization of intelligent systems within the World Wide Web are treated and applications as in Web 2.0 or Service Science are discussed and evaluated.

Furthermore the application of modern Cloud technologies for the use of software and hardware as a service via internet is introduced. Cloud technologies allow the efficient implementation of applications on distributed computer clusters and permit a high scalability as well as new business models in the internet.

Workload

See German version.

7 Courses

Competence Certificate

Non exam assessment (following 4(2) 3 of the examination regulation). The grade consists of an innovation plan (comparable to an exposé) (15%), a guideline interview (25%), a presentation of the results (20%) and a seminar paper (40%).

Prerequisites

None

Recommendation

The previous attendance of the lecture Innovation Management is recommended.

Accessibility - Assistive Technologies for Visually Impaired Persons

2400052, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

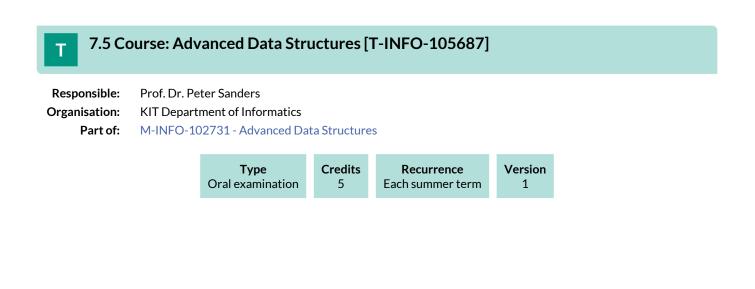

According to the World Health Organization there are 285 million visually impaired persons worldwide, of which 39 million are blind and 246 million have low vision. The partial of full loss of sight leads to a number of challenges that visually impaired persons have to face. These include difficulties in mobility and navigation in unknown terrain, missing information in social interaction or handling and finding of objects in daily live.

There are already several technical aids available to support blind and visually impaired persons. So digitized texts can be made accessible by sound output or Braille display. There are also various tools which are especially designed for blind persons such as 'speaking' clocks or pocket calculators. However, the most important technical aid by far to improve mobility is the white cane. Although a number of electronic aids to detect obstacles and to support orientation have been developed over the last years they only offer reduced functionality for a relatively high price and are therefore rarely used.

The lecture will give an overview about IT-based assistive technology (AT) for people with visual impairments. It covers the following topics:

- Information about visual impairments and their impact
- Existing assistive technology for various application areas
- AT to access information content
- Designing barrier-free software & websites

• Possibilities and ongoing research in using computer vision methods to develop novel AT for the visually impaired, e.g. to support mobility, and content access among other things.

7.6 Course: Advanced Empirical Asset Pricing [T-WIWI-110513]

Responsible:	JunProf. Dr. Julian Thimme	
Organisation:	KIT Department of Economics and Management	
Part of:	M-WIWI-101480 - Finance 3 M-WIWI-101483 - Finance 2	

Writt

Туре	Credits	Recurrence	Version
ten examination	4,5	Each winter term	1

Events					
WS 19/20	2530569	Advanced Empirical Asset Pricing	2 SWS	Lecture (V)	Thimme
WS 19/20	2530570	Übung zu Advanced Empirical Asset Pricing	1 SWS	Practice (Ü)	Thimme

Competence Certificate

The success control takes place in form of a written examination (60 min) during the semester break (according to §4(2), 1 SPO). If the number of participants is low, an oral examination (according to §4 (2), 2 SPO) may also be offered. The examination is offered every semester and can be repeated at any regular examination date.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by up to one grade level (0.3 or 0.4). Details will be announced in the lecture.

Recommendation

We strongly recommend knowledge of the basic topics in investments (bachelor course), which will be necessary to be able to follow the course. In addition, prior participation in the Asset Pricing Master course is strongly recommended.

Annotation

New course from winter semester 2019/2020.

Below you will find excerpts from events related to this course:

Advanced Empirical Asset Pricing

2530569, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Notes

In this course we will discuss the fundamentals of Asset Pricing and how to test them. Although this is an Empirical Asset Pricing course, we deal with some concepts from Asset Pricing Theory that we can test afterwards (CAPM, ICAPM, CCAPM, recursive utility). Besides, the course will cover the most important empirical methods to do so. For that purpose, we will discuss the overarching tool *Generalized Method of Moments*, and the special cases of OLS and FMB regressions. Every second week, we will meet for a programing session, in which we will look at the data to draw our own conclusions. An introduction to the software MATLAB will be given at the beginning of the course. Students should bring a laptop to these sessions. Programing skills are not required but helpful.

We start with a review of the Stochastic Discount Factor, which is already known from the course "Asset Pricing". We then derive the CAPM and the Consumption-CAPM as special cases from the general consumption-savings optimization problem of the rational investor. In the first part of the course we discuss the CAPM and, as natural extensions, models with multiple factors. Prominent phenomena such as the value premium and momentum are discussed. In the second part of the lecture we will study extensions of Consumption-CAPM and study the implications of exotic preferences.

Foundations of Information Systems

2540450, WS 19/20, 2 SWS, Language: German, Open in study portal

Description

Information plays a central role in today's society. The resulting structures and processes cannot be explained intuitively with traditional approaches of economic theory. Formerly, information has only been implicitly treated as a production factor; its role as a competitive factor used to be neglected. In order to deal with the central role of information we developed the concept of the 'information lifecycle' that systematizes all phases from information generation to information distribution. The state of the art of economic theory is presented across this information lifecycle within the lectures. The content of the lecture is deepened in accompanying lecture courses.

Learning Content

Information plays a central role in today's society. The resulting structures and processes cannot be explained intuitively with traditional approaches of economic theory. Formerly, information has only been implicitly treated as a production factor; its role as a competitive factor used to be neglected. In order to deal with the central role of information we developed the concept of the "information lifecycle" that systematizes all phases from information generation to information distribution. The single phases of that cycle,

- extraction/generation,
- storage,
- transformation,
- evaluation,
- marketing
- and usage of information

are analyzed from the business administration perspective and the microeconomic perspective. The state of the art of economic theory is presented across this information lifecycle within the lectures. The content of the lecture is deepened in accompanying lecture courses.

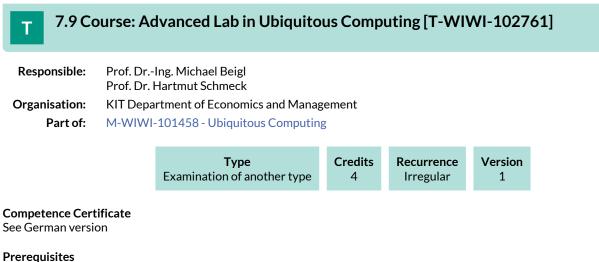

Workload

The total workload for this course is approximately 150 hours. For further information see German version.

Competence Certificate

Written examination (60 minutes) according to §4(2), 1 SPO. The exam is considered passed if at least 50 out of a maximum of 100 possible points are achieved. The grades are graded in five steps (best grade 1.0 from 95 points). Details of the grade formation and scale will be announced in the course.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the course.

Prerequisites

Exams					
WS 19/20	79-2579907-00	Advanced Management Accounting		Prüfung (PR)	Wouters

Competence Certificate

The assessment consists of an oral exam (30 min) (according to §4 (2), 2 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Recommendation

The course requires significant prior knowledge of Management Accounting, similar to the content of the courses MA 1 and 2, although completion of these particular courses is not a formal requirement.

Annotation

This course is held in English. Lectures and tutorials are integrated.

The course is compulsory and must be examined.

Students who are interested in attending this course should send an e-mail to Professor Wouters (marc.wouters∂kit.edu).

Below you will find excerpts from events related to this course:

SS 2019	7900291	Advanced Topics in Economic Theory	/	Prüfung (PR)	Mitusch, Scheffel

Competence Certificate

The course T-WIWI-102609 "Advanced Topics in Economic Theory" restarts in summer term 2019.

The assessment consists of a written exam (60min) (following §4(2), 1 of the examination regulation) at the end of the lecture period or at the beginning of the following semester.

Prerequisites

None

Recommendation

This course is designed for advanced Master students with a strong interest in economic theory and mathematical models. Bachelor students who would like to participate are free to do so, but should be aware that the level is much more advanced than in other courses of their curriculum.

Below you will find excerpts from events related to this course:

Advanced Topics in Economic Theory

2520527, SS 2019, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

The course deals with basic elements of modern economic theory. It is divided into two parts. The first part introduces the microeconomic foundations of general equilibrium á la Debreu ("The Theory of Value", 1959) and Hildenbrand/Kirman ("Equilibrium Analysis",1988). The second part deals with asymmetric information and introduces the basic techniques of contract theory.

The course is largely based on the textbook "Microeconomic Theory" (Chapters 1-5, 10, 13-20) by A.Mas-Colell, M.D.Whinston, and J.R.Green.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Literature

The course is based on the excellent textbook "Microeconomic Theory" (Chapters 1-5, 10, 13-20) by A.Mas-Colell, M.D.Whinston, and J.R.Green.

Below you will find excerpts from events related to this course:

Artificial Intelligence in Service Systems

2595650, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

Artificial Intelligence and the application of machine learning is becoming more and more popular to solve relevant business challenges. However, it is not only important to be familiar with precise algorithms, but rather a general understanding of the necessary steps with a holistic view—from real-world challenge to successful deployment of an AI. As part of this course, we teach the complete lifecycle of an AI project with a focus on supervised machine learning challenges. We do so by also teaching the use of Python and the required packages like scikit-learn and tensorflow with exemplary data. We then take this knowledge to the more complex case of service systems with different entities (e.g. companies) who interact with each other and show possibilities on how to derive holistic insights. Two possibilities to do so are the use of meta and transfer machine learning, where we teach insights in their theory, design and application.

7.32 Course: Asset Pricing [T-WIWI-102647]

 Responsible:
 Prof. Dr. Martin Ruckes Prof. Dr. Marliese Uhrig-Homburg

 Organisation:
 KIT Department of Economics and Management

 Part of:
 M-WIWI-101480 - Finance 3 M-WIWI-101482 - Finance 1 M-WIWI-101483 - Finance 2 M-WIWI-101502 - Economic Theory and its Application in Finance

Туре	Credits	Recurrence	Version

SS 2019	2530556	Übung zu Asset Pricing	1 SWS	Practice (Ü)	Uhrig-Homburg, Reichenbacher
Exams					
SS 2019	7900110	Asset Pricing		Prüfung (PR)	Uhrig-Homburg

Competence Certificate

The success control takes place in form of a written examination (75 min) during the semester break (according to §4(2), 1 SPO). The examination is offered every semester and can be repeated at any regular examination date.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by up to one grade level (0.3 or 0.4). Details will be announced in the lecture.

Prerequisites

None

Recommendation

We strongly recommend knowledge of the basic topics in investments (bachelor course), which will be necessary to be able to follow the course.

Below you will find excerpts from events related to this course:

Asset Pricing

2530555, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The lecture deals with the diverse issues arising in the context of measuring and controlling credit risk. At first, the theoretical and empirical relations between ratings, probabilities of default, and credit spreads are analysed. After that, the focus is on the valuation of credit risk. Finally, the management of credit risk, e.g. using credit derivatives and credit portfolio analysis, is examined, and the legal framework and its implications are discussed

Learning Content

This lecture deals with the valuation of risky cash flows. A stochastic discount model and a central equation will be introduced, which form the basis of nearly every valuation model in finance. That includes the valuation of stocks, bonds and derivatives. The first part of the lecture will present the theory, the second part covers empirical questions related to this approach.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Asymmetric Encryption Schemes

24115, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

This course presents the theoretical and practical aspects of Public Key Cryptography.

- The most important primitives of cryptography will be covered, as there are: one-way function, hash function, digital signature, public key encryption and digital signatures (RSA, ElGamal), and various methods of key exchange (e.g. Diffie-Hellman) with their strengths and weaknesses.
- In addition to public-key systems, the lecture provides knowledge about algorithms to solve number-theoretic problems on which the security of the systems is based. Thus the choice of parameters and the related level of security of a cryptographic system can be estimated.
- Furthermore, an introduction to provable security is provided, which presents some of the key security concepts (e.g. IND-CCA).
- The combination of cryptographic primitives will be treated on currently used protocols.

7.34 Course: Auction Theory [T-WIWI-102613]

Responsible:	Prof. Dr. Karl-Martin Ehrhart		
Organisation:	KIT Department of Economics and Management

Prerequisites

None

Below you will find excerpts from events related to this course:

Auktionstheorie

2520408, WS 19/20, 2 SWS, Open in study portal

Learning Content

This course deals with the analysis and modeling of auction which are based on game theory. This also includes aspects of applying and designing auctions as well as experiences with auctions. Main topics are:

- Single- and multi-unit auctions
- Selling and procurement auctions
- Electronic auctions (e.g. eBay, C2C, B2B)
- Multi-attributive auctions.

Annotation

We suggest to attend either Game Theory I or Decision Theory beforehand.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Automated Visual Inspection and Image Processing

24169, WS 19/20, 4 SWS, Language: German, Open in study portal

Lecture (V)

Description

Topics covered:

- sensors and concepts for image acquisition
- light and colour
- image signals (system theory, Fourier transformation, stochastic processes)
- excursion to wave optics
- pre-processing and image enhancement
- image restoration
- segmentation
- morphological image processing
- texture analysis
- detection
- image pyramids, multi scale analysis and wavelet-transform

Learning Content

- sensors and concepts for image acquisition
- light and colour
- image signals (system theory, Fourier transformation, stochastic processes)
- excursion to wave optics
- pre-processing and image enhancement
- image restoration
- segmentation

Events

Biometric Systems for Person Identification

2403011, SS 2019, 2 SWS, Language: English, Open in study portal

Lecture (V)

Description

Biometrics deals with the science of recognizing and identifying humans based on their biometrics traits, such as finger prints, face, iris, gait etc. With the increasing demands put on security and surveillance e.g. safer access control, border control/passports and identifying criminals /law enforcement, biometrics becomes more and more essential and technologies are being developed to solve many issues in this demanding area of research. In this course, the students will learn the fundamental concepts of underlying biometrics technologies, understanding of various techniques for different topics/technologies used in biometrics.

The topics include

- Introduction: Biometrics acquisitions and image processing, basic introduction to the area of computer vision/machine learning applied to biometrics

- Biometrics system: requirements, enrollment, identification/verification, performance metrics
- Biometrics technologies: Overview of different biometrics technologies
- Finger print recognition: image enhancement, state-of-the art techniques, challenges
- Iris recognition: image acquisitions, feature extraction, state-of-the-art techniques, challenges
- Face recognition: introduction, current methods, applications
- Palm print recognition: current methods
- Gait recognition: emerging methods
- Multi-Biometrics: multiple modes of biometrics, fusion strategies
- Risk analysis: attacks, liveness detection, fraud preventio

Learning Content

The student will acquire the basic theoretical and practical understanding of various technologies used in biometrics, the state-ofthe-art algorithms used and their analysis. Student will be able to take advance courses in the field of computer vision/pattern recognition on the completion of this course.

Literature

-Tutorials and related scientific papers will be put on the web -Online material on the topics discussed in the lectures Т

7.42 Course: Blockchains & Cryptofinance [T-WIWI-108880]

Recommendation

Basic knowledge from Operations Research (linear programming) and from decision theory are expected.

Below you will find excerpts from events related to this course:

Business Administration in Information Engineering and Management

2540500, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

In this lecture, classical Business Administration is applied to businesses in an information- and communicationtechnological environment. The process to extract relevant data for decision making from operational accounting systems receives special attention. In order to do so, topics such as activity-based costing and transaction costs models are addressed. The automization of the decision making process in businesses by data bases is another focus of the module. To solve such issues within a company, relevant methods such as decision theory and game theory are lectured. Finally, complex business relevant questions in a dynamically changing environment are adressed by presenting models and methods from system dynamics.

Workload

The total workload for this course is approximately 150 hours (5 credits):

Time of attendance

- Attending the lecture: 15 x 90min = 22h 30m
- Attending the exercise classes: 7 x 90min = 10h 30m
- Examination: 1h 00m

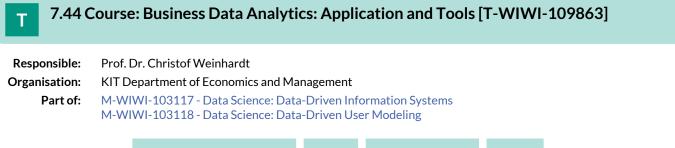

Self-study

- Preparation and wrap-up of the lecture: 15 x 180min = 45h 00m
- Preparing the exercises: 40h 00m
- Preparation of the examination: 31h 00m

Sum: 150h 00m

Course name until winter semester 2018/2019 "Applied Analytics with Open Source Tools" (T-WIWI-108438)

Below you will find excerpts from events related to this course:

Business Data Analytics: Application and Tools

2540466, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The ongoing digitalization and digitization of businesses, industries and societies is generating vast amounts of data. Hence, researchers and businesses are facing increasing pressure to build capabilities to cope with the data and generate value from the contained but yet to be discovered knowledge, insights and information. Researchers and practitioners tackling this task are referred to as data scientists and need skills at the intersection of programming, statistics and development operations. This course provides a hands-on perspective on these fields.

Learning Content

The aim of this course is to introduce practical foundations, concepts, tools and current practice of Analytics from a data scientist's perspective. The lecture is complemented with an Analytics challenge that is based on real-world data from research projects. The students immediately apply their newly acquired knowledge and learn to use a range of open source tools to solve the challenge.

Content:

- Conceptual and theoretical Foundations
- Programming languages common in data science
- Data acquisition, pre-processing
- Basics of data organization and DevOps
- Tool chain selection and automation
- Open source analytics frameworks and data processing infrastructures
- Applied analytics challenge (based on a current research project or a cooperation with an industry partner)

Workload

The total workload for this course is approximately 135 hours.

7.45 Course: Business Data Strategy [T-WIWI-106187]

Responsible:	Prof. Dr. Christof Weinhardt
Organisation:	KIT Department of Economics and Management
Part of:	M-WIWI-103117 - Data Science: Data-Driven Information Systems

Type	Credits	Recurrence	Version	
Written examination	4,5	Each winter term	1	

Events

Business Data Strategy

2540484, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Notes

With new methods for capturing and using different types of data and industry's recognition that society's use of data is less than optimal, the need for comprehensive strategies is more important than ever before. Advances in cybersecurity and information sharing and the use of data in its raw form for decision making all add to the complexity of integrated processes, ownership, stewardship, and sharing. The life cycle of data in its entirety spans the infrastructure, system design, development, integration, and implementation of information-enabling solutions. This lecture focuses on teaching about these dynamics and tools to comprehend and manage them in organisation contexts. Given the increasing size and complexity of data, methods for the transformation and structured preparation are an important tool in the process of sense-making. Modern software solutions and programming languages provide frameworks for such tasks that form another part of this course ranging from conceptual systems modelling to data manipulation to automated generation of HTML reports and web-applications.

Business Dynamics

2540531, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

Corporate growth, the diffusion of new technologies, business processes, project management, product development, service quality management – all these are examples for application areas of business dynamics. They all are dynamic systems that are characterized by feedback loops between many different variables. By means of the tools of business dynamics such systems can be modelled. Simulations of complex systems allow the analysis, the goal centered design, as well as the optimization of markets, business processes, policies, and organizations.

Annotation

The course is generally held as block course.

Business Intelligence Systems

2540422, WS 19/20, 3 SWS, Language: English, Open in study portal

Lecture (V)

Description

In most modern enterprises, Business Intelligence Systems represent a core enabler of managerial decision making in that they are supplying up-to-date and accurate information about all relevant aspects of a company's planning and operations: from stock levels to sales volumes, from process cycle times to key indicators of corporate performance.

The aim of this course is to introduce theoretical foundations, concepts, tools, and current practice of Business Intelligence Systems from a managerial and technical perspective. The lecture is complemented with a Business Intelligence System challenge, where students work with real-world data and enable system-based decision making using commercial Business Intelligence software packages.

Learning Content

 $\cdot \, \text{Conceptual Foundations}$

- · Provisioning: ETL Process, Metadata, Data Warehouse & Data Marts and Big Data Technologies
- · Consumption: Reporting, Dashboards and its relation to (Big Data) Analytics
- BI Strategy & Governance
- · BI Implementation & Post-Implementation Management
- · Business Intelligence System Challenge (in cooperation with industry partner)

Internet Business Models

2540456, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The emergence of internet economy has resulted in an accelerated evolution of commerce models in eBusiness. Early adopters have experimented with a variety of new business models, technologies and application designs. At the same time, there has been a growing demand for new standards to facilitate the exchange of information, catalogue content and transactions between buyers and sellers. But the true understanding of how to bring buyers and sellers together is still widely missing, leading to multiple cases of costly missed investments. This course focuses on the design and implementation of successful business models for eBusiness applications for the World Wide Web (WWW), imparting the basic knowledge for building successful eBusiness applications. We consider not only technical foundations of eBusiness applications but also economical aspects. In small groups, students develop and implement an eBusiness model that is eventually discussed with a representative from the venture capitalist industry.

7.50 Course: Business Planning for Founders - EUCOR [T-WIWI-110389] Т Prof. Dr. Orestis Terzidis **Responsible:** Organisation: KIT Department of Economics and Management Part of: M-WIWI-101487 - Sales Management M-WIWI-101488 - Entrepreneurship (EnTechnon) M-WIWI-101488 - Entrepreneurship (EnTechnon) Credits Recurrence Version Туре Examination of another type 3 Irregular 1 **Events** WS 19/20 2545020 2 SWS Terzidis **Business Planning for Founders** Seminar (S) (EUCOR Edition)

Competence Certificate

Alternative exam assessment.

Prerequisites

The course can only be combined with the course "International Selling - EUCOR" to be completed. The course is a combination of 6 ECTS, 3 ECTS per part. The combination can be credited either in the Entrepreneurship module or in the Sales Management module.

Below you will find excerpts from events related to this course:

Business Planning for Founders (EUCOR Edition)

2545020, WS 19/20, 2 SWS, Language: English, Open in study portal

Description

This seminar introduces basic concepts of business planning for entrepreneurs to the participants. It focusses on practical concepts andhands-on-methods on how to turn business ideas into solid businesses (e.g. Business Modelling, Market Potential, Planning of Ressorces, and further more) and on the creation of a realistic and viable Business Plan (with or without Venture Capital)

Annotation

Please register on the seminar website.

Business Strategies of Banks

2530299, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The management of a bank is in charge of the determination and implementation of business policy - taking into account all relevant endogenous and exogenous factors - that assures the bank's success in the long run. In this context, there exists a large body of banking models and theories which are helpful in describing the success and risk of a bank. This course is meant to be the bridging of banking theory and practical implementation. In the course of the lectures students will learn to take on the bank management's perspective.

The first chapter deals with the development of the banking sector. Making use of appropriate assumptions, a banking policy is developed in the second chapter. The design of bank services (ch. 3) and the adequate marketing plan (ch. 4) are then built on this framework. The operational business of banks must be guided by appropriate risk and earnings management (ch. 5 and 6), which are part of the overall (global) bank management (ch. 7). Chapter eight, at last, deals with the requirements and demands of bank supervision as they have significant impact on a bank's corporate policy.

Case studies seminar: Innovation management

2545105, WS 19/20, 2 SWS, Language: German, Open in study portal

Seminar (S)

Notes

The objective of the seminar is to master selected concepts and methods of innovation management and then to apply these practically. Working in groups, the students apply the described concepts and methods of innovation management to a case study from the automotive industry to answer specific questions. Accordingly, the block seminar involves a switch from input to the application of this input. At the end, the results of the group work are presented in the form of a seminar paper and discussed by the whole course. A short introduction to presentation techniques is planned to help students prepare the seminar papers.

Exams						
SS 2019	7900146	Challenges in Supply Chain Management Prüfung (PR) Nickel			Nickel	

Competence Certificate

The assessment consists of a written paper and an oral exam of ca. 30-40 min.

Prerequisites

None

Recommendation

Basic knowledge as conveyed in the module "Introduction to Operations Research" is assumed.

Annotation

The number of course participants is limited to 12 participants due to joint work in BASF project teams. Due to these capacity restrictions, registration before course start is required. For further information see the webpage of the course.

The course is offered irregularly. The planned lectures and courses for the next three years are announced online.

Below you will find excerpts from events related to this course:

Challenges in Supply Chain Management

2550494, SS 2019, 3 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

The course consists of case studies of BASF which cover future challenges of supply chain management. Thus, the course aims at a case-study based presentation, critical evaluation and exemplary discussion of recent questions in supply chain management. The focus lies on future challenges and trends, also with regard to their applicability in practical cases (especially in the chemical industry).

The main part of the course is working on a project together with BASF in Ludwigshafen. The students get in touch with scientific working: The in-depth work with a special scientific topic makes the students familiar with scientific literature research and argumentation methods. As a further aspect of scientific work, especially for Master students the emphasis is put on a critical discussion of the project topic.

This course will include working on cutting edge supply chain topics like Industry 4.0 / "Internet of Everything in production", supply chain analytics, risk management, procurement and production in SCM. The team essays / project reports will be linked to industry-related challenges as well as to upcoming theoretical concepts. The topics of the seminar will be announced at the beginning of the term in a preliminary meeting.

Annotation

Competence Certificate

Result of success is made by a 60 minutes written examination during the semester break (according to §4(2), 1 ERSC). Examination is offered every semester and can be retried at any regular examination date.

Prerequisites

None.

Recommendation

Basics of microeconomics obtained within the undergraduate programme (B.Sc) of economics are required.

Below you will find excerpts from events related to this course:

Competition in Networks 2561204, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

Network or infrastructure industries like telecommunication, transport, and utilities form the backbone of modern economies. The lecture provides an overview of the economic characteristics of network industries. The planning of networks is complicated by the multitude of aspects involved (like spatial differentiation and the like). The interactions of different companies - competition or cooperation or both - are characterized by complex interdependencies within the networks: network effects, economies of scale, effects of vertical integration, switching costs, standardization, compatibility etc. appear increasingly in these sectors and even tend to appear in combination. Additionally, government interventions can often be observed, partly driven by the aims of competition policy and partly driven by the aims industrial policy. All these issues are brought up, analyzed formally (in part) and illustrated by several examples in the lecture.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Literature

Will be announced in the lecture.

Computational Complexity Theory, with a View Towards Cryptography

2400063, WS 19/20, 4 SWS, Language: German, Open in study portal

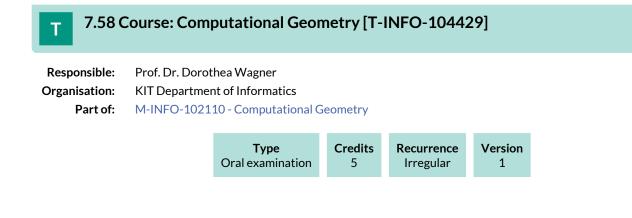

Lecture (V)

Description

What is an "efficient" algorithm? Can every algorithmic task be solved efficiently? Or are there inherently hard problems? Computational complexity provides a rigorous, mathematical foundation to reason about problems like these. In this course, we will discuss concepts such as

- machine model, time and space complexity, separations,
- nondeterminism, reductions, completeness,
- the polynomial hierarchy,
- probabilism, one-way functions,
- alternation, interactive proofs, zero-knowledge,

and illustrate them with practical examples. The course provides an outlook to applications of computational complexity theory, with a view towards cryptography.".

7.59 Course: Computational Risk and Asset Management [T-WIWI-102878]

Recommendation

Good knowledge of statistics and first programming experience with Python is recommended.

Below you will find excerpts from events related to this course:

Computational Risk and Asset Management

2500015, WS 19/20, 4 SWS, Language: English, Open in study portal

Lecture (V)

Description

The aim of this course is to master real-world challenges of computational risk and asset management and provide students with a skill set to incorporate different portfolio objectives into the investment process. It enables students to solve such challenges independently in Python.

Learning Content

The course covers several topics, among them:

Quantitative Portfolio Strategies: Extensions to Mean-Variance Portfolio Optimization

Return Densities: Forecasting with Traditional and Machine Learning Approaches, Monte Carlo Simulation

Financial Economics: Rationalizing Risk Premiums via Stochastic Discount Factor

Multi-Asset Valuation: DCF Approach, No-Arbitrage and Ito Calculus

Workload

The total workload for this course is approximately 180 hours.

Below you will find excerpts from events related to this course:

Computer Contract Law

2411604, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The course deals with contracts from the following areas:

- Contracts of programming, licencing and maintaining software
- Contracts in the field of IT employment law
- IT projects and IT Outsourcing
- Internet Contracts

From these areas single contracts will be chosen and discussed (e.g. software maintenance, employment contract with a software engineer). Concerning the respective contract the technical features, the economic background and the subsumption in the national law of obligation (BGB-Schuldrecht) will be discussed. As a result different contractual clauses will be developed by the students. Afterwards typical contracts and conditions will be analysed with regard to their legitimacy as standard business terms (AGB). It is the aim to show the effects of the german law of standard business terms (AGB-Recht) and to point out that contracts are a means of drafting business concepts and market appearance.

Learning Content

It is the aim of this course to provide students with knowledge in the area of contract formation and formulation in practice that builds upon the knowledge the students have already acquired concerning the legal protection of computer programs. Students shall understand how the legal rules depend upon, and interact with, the economic background and the technical features of the subject. The contract drafts shall be prepared by the students and will be corporately completed during the lecture. It is the aim of the course that students will be able to formulate contracts by themselves.

Computer Vision for Human-Computer Interaction

24180, WS 19/20, 4 SWS, Language: German, Open in study portal

Lecture (V)

Description

In this lecture current projects of the field of image processing will be presented which deal with the visual perception of persons re. human-computer interaction.

In respect of the individual topics we will discuss various methods and algorithms, their pros and cons and state of the art:

- Face detection and localisation
- Facial expression
- Assessment of head turns and viewing direction
- Person tracking and localisation
- Articulated body tracking
- Gesture recognition
- Audio-visual speech recognition
- Multi-camera environments
- Tools and libraries

Learning Content

The student acquires a basic understanding of computer vision topics within the context of human-computer interaction and learns how to apply them.

Competence Certificate

The assessment of the lecture is a written examination (60 minutes) according to §4(2), 1 of the examination regulation.

The examination is held in the semester of the lecture and in the following semester.

Prerequisite for admission to the written examination is attaining at least 30% of the exercise points. Therefore the online-registration for the written examination is subject to fulfilling the prerequisite.

Prerequisites

None

Recommendation

It is strongly recommended to visit at least one lecture from the Bachelor program of this chair before attending this course.

Annotation

The lecture is offered irregularly. The curriculum of the next three years is available online (www.ior.kit.edu).

Below you will find excerpts from events related to this course:

Konvexe Analysis

2550120, SS 2019, SWS, Open in study portal

Learning Content

Convex Analysis deals with properties of convex functions and convex sets, in particular with respect to the minimization of convex functions over convex sets. That the involved functions are not necessarily assumed to be differentiable allows a number a applications which are not covered by techniques from smooth optimization, e.g. approximation problems with respect to the Manhattan or maximum norms, classification problems or the theory of statistical estimates. The lecture develops along another, geometrically simple example, where a nonsmooth obstacle set is to be described by a single smooth convex constraint such that minimal and maximal distances to the obstacle can be computed. The lecture is structured as follows:

- Introductory examples and terminology
- Convex subdifferential, Lipschitz continuity and the safety margin
- Normal cones, error bounds and the maximal distance

Literature

Practice (Ü)

Learning Content

- Stochastic basics
- Firm decisions under risk expected utility theory
- The value motive for corporate risk management
- Common risk measures from practice (e.g. Cash-flow at Risk)
- Operational and financial risk management instruments
- The risk management organization (central vs. decentral)
- External risk reporting (e.g. obligations and incentives)

Workload

The total workload of this course is approximately 135.0 hours. For further information, see German version.

Competence Certificate

Alternative exam assessment (30 minutes presentation).

Prerequisites

If the course is selected within the module "Sales Management", the following courses may not be started in this module: price negotiations and sales presentations, case studies in sales and pricing.

Annotation

The course language is English. In order to participate in this course, you need to apply. Applications are usually accepted at the start of the lecture period in winter term. Detailed information on the application process is usually provided on the website of the Marketing and Sales Research Group (marketing.iism.kit.edu) shortly before the lecture period in winter term starts. Please note that only one of the 1.5-ECTS courses can be chosen in this Module.

Please note: The number of participants for this course is limited. The Marketing and Sales Research Group typically provides the possibility to attend a course with 1,5 ECTS in the respective module to all students. Participation in a specific course cannot be guaranteed.

Below you will find excerpts from events related to this course:

2530565, WS 19/20, 3 SWS, Language: German, Open in study portal

Lecture / Practice (VÜ)

Description

The lecture deals with the diverse issues arising in the context of measuring and controlling credit risk. At first, the theoretical and empirical relations between ratings, probabilities of default, and credit spreads are analysed. After that, the focus is on the valuation of credit risk. Finally, the management of credit risk, e.g. using credit derivatives and credit portfolio analysis, is examined, and the legal framework and its implications are discussed

Critical Information Infrastructures

2511400, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Notes

The course critical information infrastructures introduces students to the world of these complex sociotechnical systems that permeate societies on a global scale. Students will learn to handle the complexities involved in the design, development, operation and evaluation of critical information infrastructures. In the beginning of the lecture, critical information infrastructures will be introduced on a general level.

The following sessions will focus on an in-depth exploration of selected cases that represent current challenges in research and practice. Students will work (in a group) on a selected case and have to write a seminar paper.

There will be a short introduction to the topics for the course paper on the following topic areas. In addition, it will be possible to propose your own topics as a group in the topic areas:

- Blockchain
- Cloud Computing
- Digital Health
- Fog Computing
- Information Privacy
- Certification of critical IT-Services

In addition to introductions to the topics, an online course is also offered to introduce students to scientific writing. This means to learn how to quote, how a scientific work is structured, and in which form the results of one's research are presented. Since we offer topics in this course that also correspond to the research interests in our research group, there may also be the opportunity to work on the topics in more depth in the course of a final thesis. Students can choose a topic from a variety of topics of the topics presented, and write a course paper in a group of four students.

Learning objectives:

Students know concepts and technologies relevant for the design and reliable operation of critical information infrastructures and can leverage them to develop solutions for real-world challenges.

Notes:

Please note the changed course structure. The course will be held as a block course.

The number of participants is limited. Please register via the WiWi portal: https://portal.wiwi.kit.edu/ys/3073

Please make sure that your are available at the following dates if you would like to attend the course:

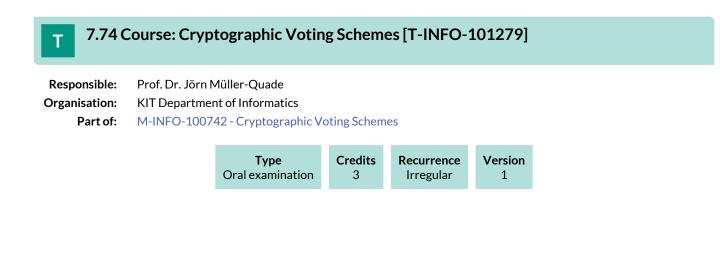

- Introduction: 4 dates on which you have to participate
 - 17.10.2019, 11.30 to 13.00: Foundations of Critical Information Infrastructures. (Geb. 05.20, R1C-02)
 - 24.10.2019, 11.30 to 13.00: Introduction to topics (Geb. 05.20, R1C-02)
 - 31.10.2019: 11.30 13.00: Socio-Technical/Socio-Material Information Systems & Design Science Research (Geb. 05.20, R1C-02)
 - 07.11.2019, 11.30 to 13.00: The Critical Information Infrastructures Landscape (Geb. 05.20, R1C-02)
- Intermediate presentations with compulsory attendance: 13.12.2019, 10am to 4pm (Geb. 05.20, R1C-02). Exact times will be announced later.
- Final presentations with compulsory attendance: 07.02.2020, 10am to 4pm (Geb. 05.20, R1C-02). Exact times will be announced later.
- Submission of the course paper: Expected on 02.02.2019. Final date will be announced in the course.

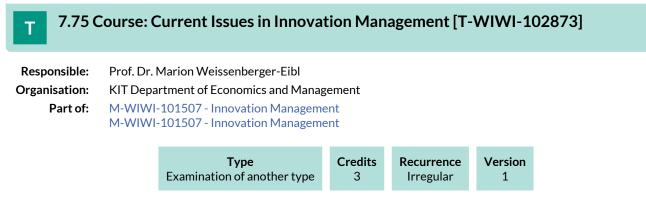

Further information on the course structure will be announced in the first session. Depending on the number of participants the individual sessions can have a shorter duration.

The meetings will take place at the Institute AIFB, KIT Campus South, Kollegiengebäude am Kronenplatz (Geb. 05.20) in Kaiserstr. 89.

The number of participants is limited to 24 students. The registration period is from 31.08.2019 to 29.09.2019. Participation slots are expected to be allocated on 01.10.2019 and must be accepted by the student by 06.10.2019. If the slot is not accepted, the free places will be offered to the students in the waiting list.

If you have any questions regarding this registration, please contact sebastian.lins@kit.edu or dehling@kit.edu.

Competence Certificate

Non exam assessment (following §4(2) 3 of the examination regulation).

Prerequisites

Learning Content

Part one: Data Mining

Why Data Mining?

- What is Data Mining?
- History of Data Mining
- Conferences and Journals on Data Mining
- Potential Applications
- Data Mining Process:
- Business Understanding
- Data Understanding
- Data Preparation
- Modeling
- Evaluation
- Deployment
- Interdisciplinary aspects of Data Mining
- Data Mining tasks
- Data Mining Algorithms (Decision Trees, Association Rules,
- Regression, Clustering, Neural Networks)
- Fuzzy Mining
- OLAP and Data Warehouse
- Data Mining Tools
- Trends in Data Mining

Part two: Examples of application of Data Mining

- Success parameters of Data Mining Projects
- Application in industry
- Application in Commerce

Workload

The total workload for this course is approximately 135 hours. For further information see German version.

The assessment of this course is a written examination (60 min) according to §4(2), 1 of the examination regulation in the first week after lecture period.

Prerequisites

None

Below you will find excerpts from events related to this course:

Database Systems and XML

2511202, WS 19/20, 2 SWS, Language: German, Open in study portal

Notes

Databases are a proven technology for managing large amounts of data. The oldest database model, the hierarchical model, was replaced by different models such as the relational or the object-oriented data model. The hierarchical model became particularly more important with the emergence of the extensible Markup Language XML. XML is a data format for structured, semi-structured, and unstructured data. In order to store XML documents consistently and reliably, databases or extensions of existing data base systems are required. Among other things, this lecture covers the data model of XML, concepts of XML query languages, aspects of storage of XML documents, and XML-oriented database systems.

Learning objectives:

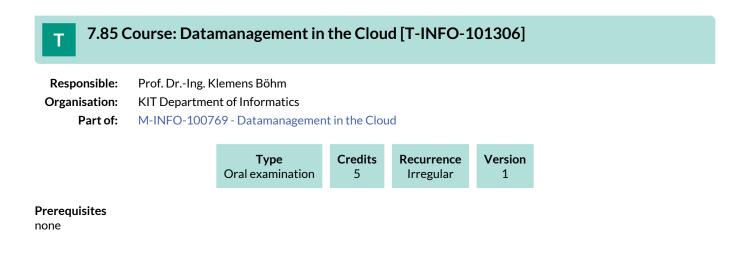

Students

- know the basics of XML and generate XML documents,
- are able to use XML database systems and to formulate queries to XML documents,
- know to assess the use of XML in operational practice in different application contexts.

Workload:

- Lecture 30h
- Exercise 15h
- Preparation of lecture 24h
- Preparation of exercises 25h
- Exam preparation 40h
- Exam 1h

Lecture (V)

Learning Content

The lecture introduces the basics, as well as advanced aspects of deep learning methods and their application for a number of computer vision tasks. The following topics will be addressed in the lecture:

- Introduction to Deep Learning
- Convolutional Neural Networks (CNN): Background
- CNNs: basic architectures and learning algorithms
- Object Recognition with CNN
- Image Segmentation with CNN
- Recurrent Neural Networks
- Generating image descriptions (Image Captioning)
- Automatic question answering (Visual Question Answering)
- Generative Adversarial Networks (GAN) and their applications
- Deep Learning platforms and tools

Annotation

The lecture is partially given in German and English.

Derivatives

2530550, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The lecture deals with the application areas and valuation of financial derivatives. After an overview of the most important derivatives and their relevance, forwards and futures are analysed. Then, an introduction to the Option Pricing Theory follows. The main emphasis is on option valuation in discrete and continuous time models. Finally, construction and usage of derivatives are discussed, e.g. in the context of risk management.

Lecture (V)

Learning Content

Due to the recent advancements in technology, it is now possible to integrate several billion transistors on a single SoC. The trend to add more and more transistors to the SoC continues unabated and leads to multi-fold increase in the SoC's complexity and capabilities. Embedded devices powered by these SoCs would be increasingly ubiquitous and seamlessly integrated into the environment. Therefore they will no longer be perceived as separate computing devices. Such

examples can be found in Wireless Sensor Networks (WSNs), Cyber Physical Systems (CPSs), electronic textiles and many more.

However, new efficient ESL (Embedded System Level) design tools as well as novel hardware-software architectures must be developed in order to enable embedded devices to achieve their true potential. The focus of this lecture is therefore on the high-level design methods and architectures for embedded systems. Since the power consumption of embedded systems is of paramount importance, this lecture emphasizes on hardware-software co-design procedures targeting low power consumption.

Recommendation

As a recommendation to attending the seminar, basic knowledge about semantic technologies and concepts should be available. This may be acquired by attending one of the following lectures – Wissensmanagement, Semantic Web Technologies 1, Semantic Web Technologies 2 or by studying related literature. Furthermore the topic entrepreneurship should be of interest.

7.95 Course: Digital Health [T-WIWI-109246]

Digital Health 2511402, WS 19/20, 2 SWS, Language: German/English, Open in study portal

Lecture (V)

Notes

The course Digital Health offers students a possibility to gain insight into current developments in the digitalization of the health care system. Students will first be introduced to the basics and challenges of the digitalization of the health care system. After the introduction lecture, the course aims to give insights into current topics in the field of digital health and offers students an opportunity to prepare a scientific paper in a group of up to three students.

There will be a short introduction lecture on all topics with regard to the written assignments. It is possible for students to write their paper in one of the following topics. Furthermore, groups of students have the possibility to propose their own topics.

- Artificial Intelligence
- Blockchain
- Cloud Computing
- Gamification
- Genomics
- Information Privacy

In addition to introduction lectures on the topics, an online course is offered to introduce students to scientific writing. This includes learning how to quote, how a scientific paper is structured and in which form the results of one's research are presented. Since we offer topics that also correspond to the research interests of our research associates, there may also be the opportunity to investigate these topics more deeply in a master thesis. Students can give their preferences for the topics offered and are afterwards assigned to groups of up to three students based on their preferences.

Learning objectives:

Students are familiar with the current developments and challenges of digitization in the health care sector, can independently develop corresponding solutions, and discuss their developed solutions in groups.

Workload:

4,5 ECTS = approx. 135 hours.

Comments:

The number of participants is limited. Please register via the WiWi portal: https://portal.wiwi.kit.edu/ys/3107

Please keep the following dates available if you are planning to attend the course:

- Introduction: 3 dates you have to attend
 - 10.2019, 15.45 to 17.15: Foundations of Digital Health. (Geb. 05.20, R1C-03)
 - 10.2019, 15.45 to 17.15: Cloud Computing, Genomics, Information Privacy (Geb. 05.20, R1C-03)
 - 11.2019, 15.45 to 17.15: Blockchain, Artificial Intelligence, Gamification (Geb. 05.20, R1C-03)
- Intermediate presentation to be attended: 04.12.2019, 10:00 to 16:00 (Building 05.20, R1A-11). Exact times will be announced soon.
- Final presentation to be attended: 02.2020 and 27.02.2020, 09:00 to 19:00 (Building 05.20, R1C-03). Exact times will be announced soon.
- Submission of the written assignment: Estimated on 12.02.2019. Final date will be announced in the event.

Further information on the procedure will be announced in the first lecture. Depending on the number of participants, each session may have a shorter duration.

The meetings will take place at the Institute AIFB, KIT-Campus Süd, Kollegiengebäude am Kronenplatz (building 05.20), Kaiserstr. 89.

The number of participants is limited to 30 students. The registration period is from **31.08.2019** to **17.10.2019**. The places are expected to be allocated on **18.10.2019** and must be accepted by the students by **22.10.2019**. If the allocation is not accepted, the free places will be offered to the students in the waiting list.

If you have any questions regarding this registration, please contact scott.thiebes@kit.edu or manuel.schmidt-kraepelin@kit.edu.

7.96 Course: Digital Marketing and Sales in B2B [T-WIWI-106981] **Responsible:** Anja Konhäuser **Organisation:** KIT Department of Economics and Management Part of: M-WIWI-101487 - Sales Management Type Credits Recurrence Version Examination of another type 1,5 Each winter term 1 **Events** WS 19/20 2572176 1 SWS **Digital Marketing and Sales in B2B** Others (sonst.) Konhäuser

Competence Certificate

Alternative exam assessment according to § 4 paragraph 2 Nr. 3 of the examination regulation. (team presentation of a case study with subsequent discussion totalling 30 minutes).

Prerequisites

None.

Annotation

Participation requires an application. The application period starts at the beginning of the semester. More information can be obtained on the website of the research group Marketing and Sales (marketing.iism.kit.edu).

Access to this course is restricted. Typically all students will be granted the attendance of one course with 1.5 ECTS. Nevertheless attendance can not be guaranteed.

For further information please contact Marketing and Sales Research Group (marketing.iism.kit.edu).

Please note that only one of the 1.5-ECTS courses can be attended in this module.

Below you will find excerpts from events related to this course:

Digital Marketing and Sales in B2B

2572176, WS 19/20, 1 SWS, Language: English, Open in study portal

Others (sonst.)

Learning Content

Learning Sessions:

The class gives insights into digital marketing strategies as well as the effects and potential of different channels (e.g., SEO, SEA, Social Media). After an overview of possible activities and leverages in the digital marketing field, including their advantages and limits, the focus will turn to the B2B markets. There are certain requirements in digital strategy specific to the B2B market, particularly in relation to the value chain, sales management and customer support. Therefore, certain digital channels are more relevant for B2B marketing than for B2C marketing.

Once the digital marketing and tactics for the B2B markets are defined, further insights will be given regarding core elements of a digital strategy: device relevance (mobile, tablet), usability concepts, website appearance, app decision, market research and content management. A major advantage of digital marketing is the possibility of being able to track many aspects of of user reactions and user behaviour. Therefore, an overview of key performance indicators (KPIs) will be discussed and relationships between these KPIs will be explained. To measure the effectiveness of digital activities, a digital report should be set up and connected to the performance numbers of the company (e.g. product sales) – within the course the setup of the KPI dashboard and combination of digital and non-digital measures will be shown to calculate the Return on Investment (RoI).

Presentation Sessions:

After the learning sessions, the students will form groups and work on digital strategies within a case study format. The presentation of the digital strategy will be in front of the class whereas the presentation will take 20 minutes followed by 10 minutes questions and answers.

Workload time of presentness = 15 hrs. private study = 30 hrs.

Digital Service Design

2540420, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Description

Designing services is different from designing products. In contrast to products being discrete and tangible objects, services are coproduced by people and only provide value when they are actually used. Digital services represent a specific category of services and specifically leverage and integrate information technology in the service delivery process.

The aim of this course is to introduce key concepts and theoretical foundations of digital service design. Furthermore, a management perspective looking at the entire service lifecycle, covering the organizational and team level as well as state-of-theart digital service design processes (e.g. agile, lean, continuous delivery) is provided. Finally, an introduction of important digital service design practices and tools supporting user research, conceptualization & prototyping as well as evaluation is given.

The lecture is complemented with a Digital Service Design challenge, where students leverage practices and tools from the lecture to suggest improvements for an existing digital service. The challenge is carried out in cooperation with practice partners (e.g. Commerzbank).

Learning Content

- Definition and key concepts of digital service design and related terms
- Introduction to the business and design perspective of a service design project
- The digital service design process from strategy through planning and prototyping to launching the digital service.
- Practice-oriented capstone project focusing on the design of a real-world digital service

Digital Services: Business Models and Transformation

2595484, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Notes

Formerly "Business and IT Service Management"

Learning Content

While the digitalization creates new opportunities for organizations, it also comes with its challenges: formerly proven business models become obsolete and need to be refined, internal processes cannot keep up with the requirements of the market and need to reassessed in any way.

The shift towards a service-based economy enables and requires companies to leverage advances in information technology to create added value for their customers. In particular, the emergence of big data and analytics enables better decision-making. The lecture teaches approaches that enable organizations to adapt their business models to new market requirements and showcases how to plan and execute a successful transformation to the desired organizational setup.

The lecture links academic content with practical examples and excises. Students are asked to actively engage in the discussion and contribute their knowledge. Invited guest speakers from industry and case studies emphasize the practical character of this lecture.

Workload

The total workload for this course is approximately 135 hours. For further information see German version.

Digital Signatures

24654, SS 2019, 2 SWS, Open in study portal

Learning Content

Digital signatures are a fundamental primitive of modern cryptography. Their practical applications include, for instance, authenticated e-mail or certificate hierarchies on the internet.

This lecture will give an overview of important signature schemes with theoretical or practical relevance. This includes:

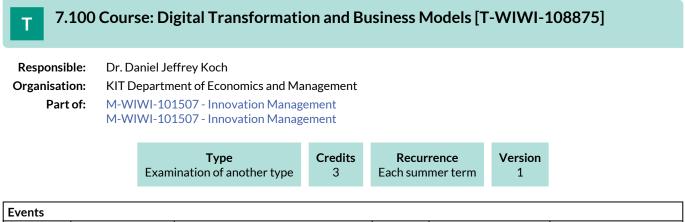

- One-time signatures, tree-based signatures, and chameleon hash functions
- RSA-based signatures
- Signatures in bilinear groups

Goal of this lecture is not only to describe these schemes, but also to discuss their security. Therefore we will introduce various security notions for digital signatures, and analyze whether the presented schemes provably meet these notions (under certain hardness assumptions).

Depending on the student's preferences, the remaining time will be used to discuss advanced topics, such as:

- Schnorr signatures
- Programmable hash functions
- Tightness of reductions
- Analysis of hardness assumptions in the generic group model

Digital Transformation of Organizations

2540556, SS 2019, 3 SWS, Language: English, Open in study portal

Description

During the last decades we witnessed a growing importance of Information Technology (IT) in the business world along with faster and faster innovation cycles. IT has become core for businesses from an operational company-internal and external customer perspective. Today, IT is considered as key enabler of operational excellence ranging from the enrichment of routine working tasks (e.g., enterprise resource planning systems) to e-enabled integration of entire business eco-systems (e.g., e-supply chains). Complementing this primarily company-internal perspective on IT, we have recently have seen a massive growth of digital extensions of existing products and services across all industries. The disruptive potential of IT has already transformed selected key industries, e.g. media or retail, and its impact is continuously growing in all areas of business and society.

Large-scale information systems (IS) in organizations strongly interplay with work practices of individual employees as well as organizational structures shaping and being shaped by individuals' behavior. Thus, successful implementation of IS requires dealing with transformation beyond technology. The ability to implement and use IS in a way supporting its overall value proposition has become a central success determinant. Accordingly, the course "Management of Information Systems" course is designed to provide a comprehensive insight into theoretical foundations, concepts, tools, and current practice of IS. The lecture is complemented with a case study. Students get the opportunity to analyze and propose solutions for a selected real-world IS implementation.

Lecture (V)

Learning Content

- Definition and key concepts of Information Systems
- Introduction of different types of application systems (organizational process & information-centric systems, customer-centric systems, supplier-centric systems and people-centric systems) and their characteristics
- The digital transformation process: The pre-implementation, implementation and post-implementation phase covering facets such as business/IT alignment, packaged software selection, IS implementation projects, as well as adoption & use of IS
- Practice-oriented case study focusing on real-world IS scenarios

Recommendation

Basic knowledge as conveyed in the module "Introduction to Operations Research" is assumed.

Annotation

Due to capacity restrictions, registration before course start is required. For further information see the webpage of the course.

The course is planned to be held every summer term.

The planned lectures and courses for the next three years are announced online.

Below you will find excerpts from events related to this course:

Ereignisdiskrete Simulation in Produktion und Logistik

2550488, SS 2019, 3 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

Simulation of production and logistics systems is an interdisciplinary subject connecting expert knowledge from production management and operations research with mathematics/statistics as well as computer science and software engineering. With completion of this course, students know statistical foundations of discrete simulation, are able to classify and apply related software applications, and know the relation between simulation and optimization as well as a number of application examples. Furthermore, students are enabled to structure simulation studies and are aware of specific project scheduling issues.

Annotation

Basic knowledge as conveyed in the module "Introduction toOperations Research" is assumed.

Besides knowledge of Operations Research students are assumed to be familiar with the following topics:

- Introduction in Statistics
- Programming basics (algorithms and data structures)
- Basic knowledge in production and logistics

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Dynamic Macroeconomics

2560402, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Description

The course Dynamic Macroeconomics addresses macroeconomic questions on an advanced level. The main focus of this course is on dynamic programming and its fundamental role in modern macroeconomics. After starting with the necessary mathematical tools, several applications in labor economics, economic growth, and asset pricing are introduced. The course pursues a hands-on approach so that students not only gain theoretical insights but also learn numerical tools to solve dynamic economic models using the modern programming language Python.

Workload

The total workload for this course is approximately 135 hours. For further information see German version.

Efficient Energy Systems and Electric Mobility

2581006, SS 2019, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

This lecture series combines two of the most central topics in the field of energy economics at present, namely energy efficiency and electric mobility. The objective of the lecture is to provide an introduction and overview to these two subject areas, including theoretical as well as practical aspects, such as the technologies, political framework conditions and broader implications of these for national and international energy systems.

The energy efficiency part of the lecture provides an introduction to the concept of energy efficiency, the means of affecting it and the relevant framework conditions. Further insights into economy-wide measurements of energy efficiency, and associated difficulties, are given with recourse to several practical examples. The problems associated with market failures in this area are also highlighted, including the Rebound Effect. Finally and by way of an outlook, perspectives for energy efficiency in diverse economic sectors are examined.

The electric mobility part of the lecture examines all relevant issues associated with an increased penetration of electric vehicles including their technology, their impact on the electricity system (power plants and grid), their environmental impact as well as their optimal integration in the future private electricity demand (i.e. smart grids and V2G). Besides technical aspects the user acceptance and behavioral aspects are also discussed.

Workload

The total workload for this course is approximately 105.0 hours. For further information see German version.

Lecture (V)

Description

The theoretical part of the course examines the New Institutions Economics which provides a theoretically found explanation for the existence of markets and intermediaries. Building upon the foundations of the market micro structure, several key parameters and factors of electronic trading are examined. These insights gained along a structured securities trading process are complemented and verified by the analysis of prototypical trading systems developed at the institute as well as selected trading systems used by leading exchanges in the world. In the more practical-oriented second part of the lecture, speakers from practice will give talks about financial trading systems and link the theoretical findings to real-world systems and applications.

Learning Content

The theoretical part of the course examines the New Institutions Economics which provides a theoretically found explanation for the existence of markets and intermediaries. Building upon the foundations of the market micro structure, several key parameters and factors of electronic trading are examined. These insights gained along a structured securities trading process are complemented and verified by the analysis of prototypical trading systems developed at the institute as well as selected trading systems used by leading exchanges in the world. In the more practical-oriented second part of the lecture, speakers from practice will give talks about financial trading systems and link the theoretical findings to real-world systems and applications.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Emissions into the Environment

2581962, WS 19/20, 2 SWS, Language: German, Open in study portal

Learning Content

The course will provide an overview of sources of air pollution, waste and municipal waste; methods to monitor and to reduce/ manage pollutant flows; regulatory framework on national and international level.

A Air pollution control

- Indtroduction and definitions
- Sources an dpoluutants
- Regulatory framework
- Emission monitoring
- Air pollution control measures

B Waste management and Recycling

- Introduction and regulatory framework
- Statistics and logistics
- Recycling and disposal
- Waste treatment

C Waste water treatment

- Municipal waste water treatment systems
- Sewage sludge disposal

Workload

The total workload for this course is approximately 105 hours. For further information see German version.

Literature

Will be announced in thecourse.

Energy and Environment

2581003, SS 2019, 2 SWS, Language: German, Open in study portal

Learning Content

The focus of the lecture is put on environmental impacts of fossil fuel conversion and related assessment methods. The list of topics is given below.

- Fundamentals of energy conversion
- Air pollutant formation from fossil fuel combustion
- Control of air pollutant emissions from fossil-fuelled power plants.
- Measures to improve conversion efficiency of fossil fuelled power plants.
- External effects of energy supply (Life Cycle Assessment of selected energy systems)
- Integrated Assessment models supporting the European Thematic Strategy on Air
- Cost-effectiveness analyses and cost-benefit analyses of air pollution control measures
- Monetary evaluation of external effects of energy supply (external costs)

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Energy Market Engineering

2540464, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

This lecture discusses different design options for electricity markets. We will focus on different approaches of nodal and zonal pricing as well as single price mechanisms and capacity markets. After a short recap of German and European market designs, the different design options will be discussed scientifically and with the help of examples. Furthermore, we will evaluate alternative market design options like microgrids. Besides the fundamental functioning of those markets, we will introduce and discuss methodological knowledge to evaluate market design options.

Annotation

The lecture has also been added in the IIP Module Basics of Liberalised Energy Markets.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Former course title until summer term 2017: T-WIWI-103131 "Regulatory Management and Grid Management - Economic Efficiency of Network Operation"

Below you will find excerpts from events related to this course:

Energy Networks and Regulation

2540494, WS 19/20, 2 SWS, Open in study portal

Lecture (V)

Learning Content

The lecture "Energy Networks and Regulation" provides insights into the regulatory framework of electricity and gas. It touches upon the way the grids are operated and how regulation affects almost all grid activities. The lecture also addresses approaches of grid companies to cope with regulation on a managerial level. We analyze how the system influences managerial decisions and strategies such as investment or maintenance. Furthermore, we discuss how the system affects the operator's abilities to deal with the massive challenges lying ahead ("Energiewende", redispatch, European grid integration, electric vehicles etc.). Finally, we look at current developments and major upcoming challenges, e.g., the smart meter rollout. Covered topics include:

- Grid operation as a heterogeneous landscape: big vs. small, urban vs. rural, TSO vs. DSO.
- Objectives of regulation: Fair price calculation and high standard access conditions.
- The functioning of incentive regulation
- Amendment to the incentive regulation: its merits, its flaws
- The revenue cap and how it is adjusted according to certain exogenous factors
- Grid tariffs: How are they calculated, what is the underlying rationale, do we need a reform (and which)?
- Exogenous costs shifted (arbitrarily) into the grid, e.g. feed-in tariffs for renewable energy or decentralized supply.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Energy Policy

2581959, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

The course deals with material and energy policy of policy makers and includes the effects of such policies on the economy as well as the involvement of industrial and other stakeholders in the policy design. At the beginning the neoclassical environment policy is discussed. Afterwards the Sustainable Development concept is presented and strategies how to translate the concept in policy decision follows. In the next part of the course an overview about the different environmental instruments classes, evaluation criteria for these instruments and examples of environmental instruments like taxes or certificates will be discussed. The final part deals with implementation strategies of material and energy policy.

Recommendation

Basic knowledge of network theory and optimisation theory are helpful, but not required. Programming will be in Python. Basic knowledge of mathematics, differential equations, statistics and programming is assumed.

Below you will find excerpts from events related to this course:

Energy System Modelling

2400230, SS 2019, 2 SWS, Language: English, Open in study portal

Learning Content

Topics include:

- Time series analysis of wind, solar and energy demand in Europe.
- Complex network theory.
- Power flow in electrical networks.
- Modelling storage, the role of storage versus networks.
- Basics of optimisation, Karush-Kuhn-Tucker conditions.
- Basics of microeconomics.
- Economics of electricity markets.
- Short-run versus long-run efficiency.
- Network optimisation, storage optimisation.
- Programming energy system models.
- Coupling electricity to other energy sectors.
- Role of renewables in electricity markets.

Additional topics may also include:

- Dynamics in power networks.
- Contingency analysis.
- Effects of climate change on energy systems.

Practical course (P)

Description

This project invites students to either pursue their own FinTech innovation project or to contribute to the Chair's ongoing innovation projects.

Learning Content

The course is targeted to students with strong knowledge in the field of computational risk and asset management and strong programming skills. It offers students the opportunity to develop an algorithmic solution and hence ample their programming experience and their understanding of financial economics or asset and risk management.

Workload

The total workload for this course is approximately 270 hours. This consists of regular meetings with members of the research group and time for independent work on the software project.

The topics are prepared in small groups. The seminar consists of two attendance meetings (kick-off event and final presentation). Between the appointments, independent work is required. The results will be presented at the end of the semester. There is an obligation to attend all seminars.

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Literature

Will be announced during/prior to the seminar as this varies from topic to topic.

7.127 Course: Environmental and Resource Policy [T-WIWI-102616]

Competence Certificate

The assessment consists of a written exam (60 min) (according to \$4(2), 1 of the examination regulations). By successful completion of the exercises (\$4(2), 3 SPO 2007 respectively \$4(3) SPO 2015) a bonus can be obtained. If the grade of the written exam is at least 4.0 and at most 1.3, the bonus will improve it by one grade level (i.e. by 0.3 or 0.4).

Prerequisites

None

Below you will find excerpts from events related to this course:

Experimental Economics

2540489, WS 19/20, 2 SWS, Language: German, Open in study portal

Learning Content

Experimental Economics have become a separate field in Economics. Nearly all fields of the economic discipline use economic experiments to verify theoretical results. Besides being used for empricial validation, this method is applied in political and strategic consulting. The lecture gives an introduction to experimental methods in economics and shows differences to experiments in natural sciences. Scientific studies are used to show exemplary applications.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Type	Credits	Recurrence	Version	
Written examination	4,5	Each winter term	4	

Exams						
SS 2019	7900233	Facility Location and Strategic Supply Chain Management	Prüfung (PR)	Nickel		

Competence Certificate

Due to a research semester of Professor Nickel in WS 19/20, the course "Facility Location and Strategic Supply Chain Management" does NOT take place in WS 19/20. In particular, neither WS 19/20 nor SS 20 will offer an exam for the lecture. The follow-up exam to the lecture in WS 18/19 takes place in SS 19 and is exclusively for students in the second examination.

The assessment consists of a written exam (60 min) according to Section 4 (2), 1 of the examination regulation.

The exam takes place in every semester.

Prerequisite for admission to examination is the succesful completion of the online assessments.

Prerequisites

Prerequisite for admission to examination is the succesful completion of the online assessments.

Recommendation

None

Annotation

The lecture is held in every winter term. The planned lectures and courses for the next three years are announced online.

Competence Certificate

The assessment takes place in the form of a written examination (75 minutes) according to §4(2), 1 SPO. The examination takes place during the semester break. The examination is offered every semester and can be repeated at any regular examination date. A bonus can be acquired through successful participation in the excercises. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by up to one grade level (0.3 or 0.4). Details will be announced in the lecture.

Prerequisites

None

Recommendation

Knowledge from the course "Derivatives" is very helpful.

Annotation

The oourse is offered as a block course.

Below you will find excerpts from events related to this course:

Fixed Income Securities

2530260, WS 19/20, 3 SWS, Language: German, Open in study portal

Lecture / Practice (VÜ)

Description

The lecture deals with both German and international bond markets, which are an important source of funding for both the corporate and the public sector. After an overview of the most important bond markets, various definitions of return are discussed. Based on that, the concept of the yield curve is presented. The modelling of the dynamics of the term structure of interest rates provides the theoretical foundation for the valuation of interest rate derivatives, which is discussed in the last part of the lecture.

Learning Content

Annotation

Part I and II of the lecture are held consecutively in the same semester.

Below you will find excerpts from events related to this course:

Globale Optimierung I

2550134, SS 2019, 2 SWS, Open in study portal

Learning Content

In many optimization problems from economics, engineering and natural sciences, numerical solution methods are only able to efficiently identify *local* optimizers, while it is much harder to find *globally* optimal points. This corresponds to the fact that by local search it is easy to find the summit of the closest mountain, but that the search for the summit of Mount Everest is rather elaborate.

Part I of the lecture treats methods for global optimization of convex functions under convex constraints. It is structured as follows:

- Introduction, examples, and terminology
- Existence results
- Optimality in convex optimization
- Duality, bounds, and constraint qualifications
- Numerical methods

Nonconvex optimization problems are treated in part II of the lecture.

The lecture is accompanied by computer exercises in which you can learn the programming language MATLAB and implement and test some of the methods for practically relevant examples.

WS 19/20	7900113	Human Factors in Security and Privacy	Prüfung (PR)	Volkamer		

Competence Certificate

The lecture will not be offered in the winter semester 2019/2020.

Wr

The assessment of this course is a written examination (60 min) according to \$4(2), 1 of the examination regulation or an oral exam (30 min) following \$4, Abs. 2, 2 of the examination regulation.

The exam takes place every semester and can be repeated at every regular examination date.

Prerequisites

Successful participation in the exercises.

Recommendation

The prior attendance of the lecture "Information Security" is strongly recommended.

Image Data Compression

2400112, WS 19/20, 2 SWS, Open in study portal

Lecture (V)

Learning Content

This module conveys to the students the theoretical and practical aspects of the principal stages in image data acquisition and compression. The discussion progresses from the coding of un-correlated sequential data streams to de-correlation of natural 2D images and to exploitation of temporal correlations in video data coding. Each considered technique is provided with a statistical justification and characterised with basic information-theoretic metrics.

In the end of the class, an outlook is given to non-conventional image-based information coding schemes (watermarking and steganography).

Industrial Services

2595505, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

Services are becoming ever more important in business. Today, the gross income share of services in Germany exceeds 70%. Following this trend, many companies that previously focused solely on the sale of goods, strive to an extension of their business model: In order to realize new competitive advantages in domestic and international markets, they enrich their material goods with customer-specific services. This transformation to a provider of integrated solutions is called "Servitization" (Neely 2009). For this reason, so-called industrial services to companies of increasing importance. They benefit from the increasingly detailed data collected (on "Big Data"), e.g. concerning user profiles, failure statistics, usage history, accrued expenses, etc. Only these data allow in principle to end products and spare parts are delivered faster, cheaper and more targeted and technicians can be used more efficiently with the correct skills. This requires, however, also suitable methods of optimization, prognosis or predictive modeling. When used properly, such methods can minimize logistics costs, increase availability, prevent potential failures and improve repair planning. This is also enabled by latest "Technology Enabled Services" along with corresponding data transfer and analysis ("Internet of Things", automatic error detection, remote diagnostics, centralized collection of consumption data, etc.). The change from goods manufacturer to a provider of integrated solutions requires new services, transformation of business models as well as intelligent new contract types, which are addressed in the course as well.

More specifically, the lessons of this lecture will include:

- Servitization The Manufacturer's Transformation to Integrated Solution Provider
- Service Levels Definitions, Agreements, Measurements and Service Level Engineering
- The "Services Supply Chain"
- Spare Parts Planning Forecasting, Assortment Planning, Order Quantities and Safety Stocks
- Distribution Network Planning Network Types, Models, Optimization
- Service Technician Planning
- Condition Monitoring, Predictive Maintenance, Diagnose Systems
- Call Center Services
- Full Service Contracts
- IT-enabled Value-Add Services Industrial Service Innovation

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Below you will find excerpts from events related to this course:

VInnovation Management: Concepts, Strategies and Methods
2545100, SS 2019, 2 SWS, Language: German, Open in study portalLecture (V)

Notes

The lecture will be held in German.

Learning Content

The course 'Innovation Management: Concepts, Strategies and Methods' offers scientific concepts which facilitate the understanding of the different phases of the innovation process and resulting strategies and appropriate methodologies suitable for application.

The concepts refer to the entire innovation process so that an integrated perspective is made possible. This is the basis for the teaching of strategies and methods which fulfil the diverse demands of the complex innovation process. The course focuses particu-larly on the creation of interfaces between departments and between various actors in a company's environment and the organisation of a company's internal procedures. In this context a basic understanding of knowledge and communication is taught in addi-tion to the specific characteristics of the respective actors. Subsequently methods are shown which are suitable for the profitable and innovation-led implementation of inte-grated knowledge.

Annotation

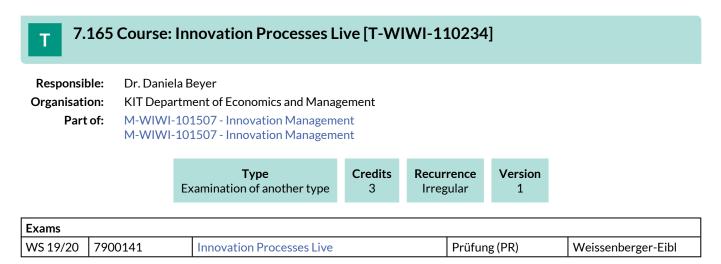

This course was formerly named "Innovation Management".

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Literature

A detailed bibliography is provided with the lecture notes.

Competence Certificate

Alternative exam assessments (§4(2), 3 SPO). The grade consists of an exposé (15%), a guideline interview or an analysis tool (25%), a group presentation of the results (20%) and a seminar paper (40%).

Prerequisites

None.

Recommendation

Prior attendance of the course Innovation Management [2545015] is recommended.

7.166 Course: Innovationtheory and -Policy [T-WIWI-102840]

SS 2019	2560236	Innovationtheory and -policy	SWS	Lecture (V)	Ott
SS 2019	2560237	Übung zu Innovationstheorie und -politik	SWS	Practice (Ü)	Ott, Eraydin
Exams					
SS 2019	7900107	Innovationtheory and -Policy		Prüfung (PR)	Ott

Competence Certificate

The assessment consists of a written exam (60 min) according to Section 4(2), 1 of the examination regulation. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Students will be given the opportunity of writing and presenting a short paper during the lecture time to achieve a bonus on the exam grade. If the mandatory credit point exam is passed, the awarded bonus points will be added to the regular exam points. A deterioration is not possible by definition, and a grade does not necessarily improve, but is very likely to (not every additional point improves the total number of points, since a grade can not become better than 1). The voluntary elaboration of such a paper can not countervail a fail in the exam.

Prerequisites

None

Recommendation

Basic knowledge of micro- and macroeconomics is assumed, as taught in the courses Economics I [2600012], and Economics II [2600014]. In addition, an interest in quantitative-mathematical modeling is required.

SS 2019	7900280	Intelligent CRM Architectures		Prüfung (PR)	Geyer-Schulz	

Competence Certificate

This lecture will be offered for the last time in winter semester 2019/20.

Written examination (60 minutes) according to §4(2), 1 SPO. The exam is considered passed if at least 50 out of a maximum of 100 possible points are achieved. The grades are graded in five steps (best grade 1.0 from 95 points). Details of the grade formation and scale will be announced in the course.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the course.

Prerequisites

None

Recommendation

It is recommended to additionally review the Bachelor-level lecture "Customer Relationship Management" from the module "CRM and Servicemanagement".

Below you will find excerpts from events related to this course:

Intelligent CRM Architectures

2540525, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

The lecture is structured in three parts:

In the first part the methods used for architecture design are introduced (system analysis, UML, formal specification of interfaces, software and analysis patterns, and the separation in conceptual and IT-architectures. The second part is dedicated to learning architectures and machine learning methods. The third part presents examples of learning CRM-Architectures.

Workload

The total workload for this course is approximately 135 hours (4.5 credits):

Time of attendance

- Attending the lecture: 15 x 90min = 22h 30m
- Attending the exercise classes: 7 x 90min = 10h 30m
- Examination: 1h 00m

Self-study

- Preparation and wrap-up of the lecture: 15 x 180min = 45h 00m
- Preparing the exercises: 25h 00m
- Preparation of the examination: 31h 00m

Sum: 135h 00m

Annotation

This course replaces T-WIWI-106342 "Interactive Systems" starting summer term 2018. The course is held in english.

Below you will find excerpts from events related to this course:

Interactive Systems

2540558, SS 2019, 3 SWS, Language: English, Open in study portal

Description

Advanced information and communication technologies make interactive systems ever-present in the users' private and business life. They are an integral part of smartphones, devices in the smart home, mobility vehicles as well as at the working place in production and administration (e.g. in the form of dashboards).

With the continuous growing capabilities of computers, the design of the interaction between human and computer becomes even more important. The aim of this course is to introduce the foundations, theoretical grounding, key concepts and principles as well as current practice of interactive systems. The contents of the course abstract from the technical implementation details. The students get the necessary knowledge to guide the successful implementation of interactive systems in business and private life.

Notes

The lecture is complemented with a capstone project assignment, where students analyze and review existing interactive systems and suggest areas of improvement / extensions.

Learning Content

Description

The main aspects of this course are the chances and the risks which are associated with international transactions. We carry outour analysis from two distinct perspectives: First the point of view of an international investor second that, of an international corporation. Several alternatives to the management of foreign exchangerisks are shown. Due to the importance of foreign exchangerisks, the first part of the course deals with currency markets. Furthermore current exchange rate theories are discussed.

International Management in Engineering and Production

2581956, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

- Fundamentals of international business
- Forms of international cooperation and value creation
- Site selection
- Cost driven internationalization and site selection
- Sales and customer driven internationalization and site selection
- Challenges, risks and risk mitigation
- Management of international production sites
- Types and case studies of international production

Workload

The total workload for this course is approximately 105 hours. For further information see German version.

Literature

Will be announced in the course.

7.174 Course: International Selling – EUCOR [T-WIWI-110381]

Responsit		senave Martin Klarmann				
Organisati	on: KIT Depa	artment of Economics and Manag	ement			
Part	M-WIW	-101487 - Sales Management -101488 - Entrepreneurship (En] -101488 - Entrepreneurship (En]				
		Type Examination of another type	Credits 3	Recur Or		Version 1
Events						
WS 19/20	2572179	International Selling – EUCO	OR	2 SWS	Block	(B)

Competence Certificate

Non exam assessment according to § 4 paragraph 2 Nr. 3 of the examination regulation (presentation). The grade is based on the presentation and the subsequent discussion.

Prerequisites

The courses "Business Planning for Founders - EUCOR" and the course "International Selling - EUCOR" must be taken together.

Annotation

An application is required to participate in this course. The application phase usually takes place at the beginning of the lecture period. Further information on the application process can be found on the website of the Marketing and Sales Research Group (marketing.iism.kit.edu) shortly before the start of the lecture period.

Please note that the courses "Business Planning for Founders - EUCOR" (3 ECTS) and "International Selling - EUCOR" (3 ECTS) can only be taken together (6 ECTS in total). In combination with the mandatory course "Sales Management and Retailing" (3 ECTS) the module is completed.

Below you will find excerpts from events related to this course:

International Selling – EUCOR

2572179, WS 19/20, 2 SWS, Language: English, Open in study portal

Block (B)

Notes

This course is offered as part of the EUCOR programme in cooperation with EM Strasbourg. Max. 10 students of KIT and max. 10 students of EM Strasbourg will develop a sales presentation in tandems (teams of 2). This is based on the value proposition of a business model developed in the LV "Business Planning for Founders - EUCOR".

Annotation

- An application is required to participate in this event. The application phase usually takes place at the beginning of the lecture period. Further information on the application process can be found on the website of the Marketing and Sales Research Group (marketing.iism.kit.edu) shortly before the start of the lecture period.
- Please note that the courses "Business Planning for Founders EUCOR" (3 ECTS) and "International Selling EUCOR" (3 ECTS) can only be taken together (6 ECTS in total). In combination with the mandatory course "Sales Management and Retailing" (3 ECTS) the module is completed.

Exams							
SS 2019	7900228	Joint Entrepreneurship School 2019		Prüfung (PR)	Terzidis		

Competence Certificate

The learning control of the program (Summer School) consists of two parts:

A) Investor Pitch:

Based on a presentation (investor pitch) in front of a jury, the insights gained and developed during the course of the event are presented and the business idea presented. Among other things, the presentation performance of the team, the structured content and the logical consistency of the business idea are evaluated. The exact evaluation criteria will be announced in the course.

B) Written elaboration:

The second part of the assessment is a written report. The iterative knowledge gain of the entire event is systematically logged and can be further supplemented by the contents of the presentation. The report documents key action steps, applied methods, findings, market analyzes and interviews and prepares them in writing. The exact structure and requirements will be announced in the course.

The grade consists of 50% presentation performance and 50% written preparation.

Prerequisites

The Summer School is aimed at master students of KIT. Prerequisite is the participation in the selection process.

Recommendation

We recommend basic business knowledge, the lecture Entrepreneurship as well as openness and interest in intercultural exchange. Solid knowledge of the English language is an advantage.

Annotation

The working language during the Summer School is English. A one-week stay in China is part of the Summer School.

Below you will find excerpts from events related to this course:

Knowledge Discovery

2511302, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Notes

The lecture provides an overview of machine learning and data mining techniques for knowledge discovery from large data sets. These techniques are examined in respect of algorithms, applicability to different data representations and application in the real world.

Knowledge discovery is a well-established field with a large community investigating methods for the discovery of patterns and regularities in large data sets, including relational databases and unstructured text.

A variety of methods are available to assist in extracting patterns that, if interpreted, provide valuable, possibly previously unknown, insights. This information can be predictive or descriptive in nature.

This lecture provides an overview of this field. The lecture imparts specific techniques and methods, challenges and current and future research workin this field.

Topics of the lectures comprise the whole Machine Learning and Data Mining process like CRISP, data warehousing, OLAPtechniques, learning algorithms, visualization and empircial evaluation. Covered learning techniques range from traditional approaches like decision trees, neural networks and support vector machines to selected approaches resulting from current research. Discussed learning problems are amongst others feauturevector-based learning, text mining and social network analysis.

Learning obectives:

Students

- know fundamentals of Machine Learning, Data Mining and Knowledge Discovery.
- are able to design, train and evaluate adaptive systems.
- conduct Knowledge Discovery projects in regards to algorithms, representations and applications.

Workload:

- The total workload for this course is approximately 135 hours
- Time of presentness: 45 hours
- Time of preperation and postprocessing: 60 hours
- Exam and exam preperation: 30 hours

Exercises to Knowledge Discovery

2511303, WS 19/20, 1 SWS, Language: English, Open in study portal

Practice (Ü)

Notes

The exercises are related to the lecture Knowledge Discovery.

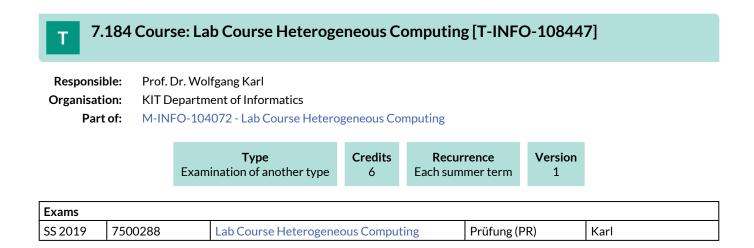

Multiple exercises are held that capture the topics, held in the lecture Knowledge Discovery, and discuss them in detail. Thereby, practical examples are given to the students in order to transfer theoretical aspects into practical implementation.

Topics of the lectures comprise the whole Machine Learning and Data Mining process like CRISP, data warehousing, OLAPtechniques, learning algorithms, visualization and empircial evaluation. Covered learning techniques range from traditional approaches like decision trees, neural networks and support vector machines to selected approaches resulting from current research. Customized Embedded Processor Design

2424302, SS 2019, 4 SWS, Language: German/English, Open in study portal

Practical course (P)

Description

Internet of Things (IoT) covers an ever-increasing range of ap plications. Smart sensors and embedded devices with networking capabilities connect to the Internet to provide advanced control and mon itoring services in healthcare, smart home, smart city and many other domains.

The design of embedded processors, especially for IoT, has experienced significant progress since past few years. This development has been characterized by the increasing demand for application-specif ic solutions for IoT in order to fulfil the diverse and contradictory requirements of low power consumption, high performance, low cost and most important ly an efficient time-to-market deployment of those processors.

Application Specific Instruction Set Processors (ASIP) are customized processors, having a specific instruction set targeting a specific application to achieve an optimal solution for the above requirements. This customization can be addressed at different architectural levels by defining customized instructions, including/excluding predefined hardware blocks or setting processor's parameters.

The focus of this lab is to get hands-on expertise of state-of-the-art ASIP Tool-Suite and practice optimized processor design for IoT. We will select an IoT application from healthcare domain (e.g. heart rate mo nitoring), profile them, design ASIP targeting power/area/speed eff iciency, and then use our infrastructure to benchmark the designed ASIP to com pare cost & benefit in terms of performance, power, area, etc.

The ASIP design flow includes analysing and profiling the targeted application, defining an ASIP accordingly, creating the speci al instruction, embedding required hardware blocks or configuring differ ent architectural parameters. The synthesizable hardware description and complet e compiler tool chain are generated automatically, and then t he customized processor is implement ed on an FPGA platform. This processor can be benchmarked for performance, area, and power constraints using ModelSim and Xilinx tools.

For this lab, the lab script and all exercises are available in English language.

Learning Content

The student will be supervised to learn how to adapt and customize a processor. This is done using state-of-the-art tool chains that can generate the required hardware description of the processor based on the optimization and customization that the student wants to do such as targeting performance and/or power goals. In addition, synthesis and implementation of the generated processor will be also done at the end using an FPGA platform.

Designing embedded processors with an application-specific instruction set

2424302, WS 19/20, 4 SWS, Language: German/English, Open in study portal

Practical course (P)

Description

The design of embedded processors has experienced significant progress since past few years. This development has been characterized by the increasing demand for application-specific solutions in order to fulfil the diverse and contradictory requirements of low power consumption, high performance, low cost and most importantly an efficient time-to-market deployment of those processors.

Application Specific Instruction Set Processors (ASIP) are customized processors, having a specific instruction set targeting a specific application to achieve an optimal solution for the above requirements. This customization can be addressed at different architectural levels by defining customized instructions, including/excluding predefined hardware blocks or setting processor's parameters.

The focus of this lab is to get hands-on expertise of state-of-the-art ASIP Tool-Suite. The ASIP design flow typically starts with analyzing and profiling the targeted application, after which an ASIP is defined by specifying its instruction set, embedding required hardware blocks or by configuring different architectural parameters. A synthesizable hardware description and complete compiler tool chain is generated automatically, which is then used to implement and verify the customized processor on an FPGA platform. This processor can be benchmarked for performance, area, and power constraints using ModelSim and Xilinx tools. Additionally, it can also be refined if the requirements are not fulfilled.

For this lab, the lab script and all exercises are available in English language.

Learning Content

The student will be supervised to learn how to adapt and customize a processor. This is done using state-of-the-art tool chains that can generate the required hardware description of the processor based on the optimization and customization that the student wants to do such as targeting performance and/or power goals. In addition, synthesis and implementation of the generated processor will be also done at the end using an FPGA platform.

Design of embedded systems

2424303, SS 2019, 4 SWS, Language: German/English, Open in study portal

Practical course (P)

Description

Embedded Systems are systems that are composed of hardware and software parts that are developed for a special task within a bigger system.

Examples for such systems are smart phones, digital cameras, robot controls, set-top boxes etc. The application areas of such systems are growing rapidly. As these systems are not only composed of application software, this lab exercises the combined development of hardware and software, as it is typical for embedded systems. A Fischertechnik robot and a hardware development board are used as target system.

The schedule of the lab is as follows:

At first, the abstract behavior of the system is described. The task is to have the robot follow a small black line on a bright background by using photoresistors. This specification is transformed into a software for a microcontroller. The microcontroller is available as a hardware description. To connect it to periphery (motors and photoresistors), additional parts have to be written in a hardware-description language. This shows the usage of typical development- and design tools for simulation and synthesis. After combining the hardware and the software parts, the robot is tested against the initial specification.

Low Power Design and Embedded Systems

2424811, SS 2019, 2 SWS, Language: English, Open in study portal

Practical course (P)

Description

Nowadays, power consumption is on of the most important criterion in the design of on-chip applications. Other design constraints, such as performance, were dominant in the past, but now it is imperative to optimize the power consumption, due it is a limiting factor. In fact, the power consumption has brought out many changes in the last decade: the fact that today we have multi-core chips instead of single core chips, is a direct result of the increase of power consumption. The power consumption is not only a matter of hardware, but also the software and the operating system decisively determine it. Therefore, this internship is indispensable for all who deal with on-chip systems at hardware and software level.

The second part of the lab consists of a Hardware/Software Co-design exploration using a High-Level Synthesis (HLS) Tool called "LegUp". This tool is capable to take a C code implementation and to produce three types of implementations: a complete hardware (RTL) implementation, a software implementation to be executed in a MIPS soft-processor, and a hybrid implementation where one or more functions of a program are compiled to hardware accelerators with the remaining program segments running in software in a MIPS soft-processor. Considering these possibilities, the participants of the Lab will perform an exploration and analysis of the implementations in terms of required execution cycles, maximum frequency, area (FPGA resources), and power consumption. Altera Quartus tools are used to synthesize the implementations and obtain metrics, while Modelsim tool is used to perform simulations.

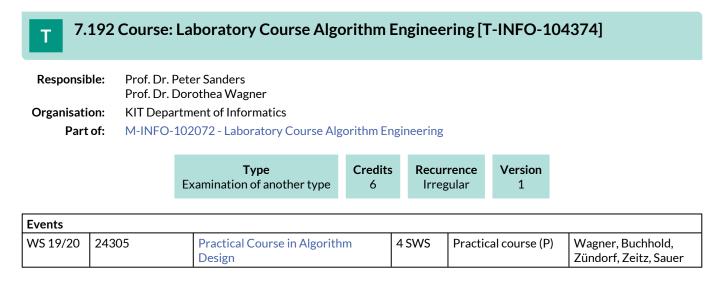

Low Power Design and Embedded Systems

Practical course (P)

Notes

The lab deals with the IT security of everyday utensils. Implemented security mechanisms are first theoretically investigated and put to the test with practical attacks. Finally, countermeasures and suggestions for improvement are worked out. The lab is offered within the competence center for applied security technologies (KASTEL) and is supervised by several institutes.

The success control takes the form of a final presentation, a thesis and the handing over of the developed code.

Liberalised Power Markets

2581998, WS 19/20, 2 SWS, Language: English, Open in study portal

Learning Content

- 1. The European liberalisation process
- 1.1 The concept of a competitive market
- 1.2 The regulated market
- 1.3 Deregulation in Europe
- 2. Pricing and investments in a liberalised power market
- 2.1 Merit order
- 2.2 Prices and investments
- 2.3 Market flaws and market failure
- 2.4 Regulation in liberalised markets
- 2.5 Additional regulation mechanisms
- 3. The power market and the corresponding submarkets
- 3.1 List of submarkets
- 3.2 Types of submarkets
- 3.3 Market rules
- 4. Risk management
- 4.1 Uncertainties in a liberalised market
- 4.2 Investment decisions under uncertainty
- 4.3 Estimating future electricity prices
- 4.4 Portfolio management
- 5. Market power
- 5.1 Defining market power
- 5.2 Indicators of market power
- 5.3 Reducing market power
- 6. Market structures in the value chain of the power sector

Annotation

The course "Basics of Liberalised Energy Markets" [2581998] will be reduced to 3 credits in winter term 2015/2016 and the tutorial [2581999] is no longer offered.

Lecture (V)

Workload

The total workload for this course is approximately 105.0 hours. For further information see German version.

Life Cycle Assessment

2581995, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

Our society has reached a historically unique material prosperity. At the same time, environmental burdens and resource consumption are continuously reaching new peaks - not only regarding greenhouse gas emissions and oil production rates. It is obvious that the material and energy intensity of products and services has to decrease if we want to keep our current level of material prosperity on the long run. Enormous efficiency gains, as they have been reached e.g. for labour productivity, however, require that environmental burdens and resource consumption per unit of product are in the first place known, transparent and can thus be optimised. This data and its calculation are increasingly requested and sooner or later will have to become as essential for management as e.g. unit labour costs.

Life cycle assessment is a methodology in sustainability assessment that provides this information and deduces optimisation potentials and decision support for companies, politics, consumers etc. To this end, material and energy flows are compiled along the whole life cycle of a product from extraction of raw materials, via production and use of a product until its disposal. Subsequently, environmental impacts of these flows are analysed.

This lecture describes structure and individual steps of life cycle assessments in detail. Furthermore, it explains its application in decision support. In interactive phases, participants recapitulate the theoretical basis by own calculations. As an outlook, further instruments in sustainability assessment are introduced that analyse other sustainability aspects.

Workload

Total effort required will account for approximately 105h (3.5 credits).

Localization of Mobile Agents

24613, SS 2019, 3 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

This module provides a systematic introduction into the topic of localization methods. In order to facilitate understanding, the module is divided into four main topics. Dead reckoning treats the instantaneous determination of a vehicle's position based on dynamic parameters like velocity or steering angle. Localization with the help of measurements of known landmarks is part of static localization. In addition to the closed-form solutions for particular measurements (distances and angles), the least squares method for fusion arbitrary measurements is also introduced. Dynamic localization treats the combination of dead reckoning and static localization. The central part of the lecture is the derivation of the Kalman filter, which has been successfully applied in several practical applications. Finally, simultaneous localization and mapping (SLAM) is introduced, which allows localization in case of (partly) unknown landmark positions.

Workload

The amount of work required is ca.180 hours.

Low Power Design

2424672, SS 2019, 2 SWS, Language: English, Open in study portal

Description

Smart embedded devices driven by advances in fields as diverse as automotive smart home, to high-tech like lithography or battery technology for IoT devices are now omnipresent in our lives. Today's consumers have very high expectations from the embedded devices they own. Many emerging technologies such as virtual reality, robotics and artificial intelligence are limited in scope only by the performance of the underlying embedded devices. Unfortunately, performance of embedded devices is inherently constrained both by their limited cost, size as well as heat dissipating capacity and their limited on-board battery. The fact that all contemporary smartphones have multi-core chips running at low frequencies instead of single-core chips running at high frequencies can be attributed directly to the power consumption constraints imposed on them.

The constraints mandate highly optimized hardware-software co-design techniques for embedded devices that allows extraction of maximum performance with minimal power consumption. A good low power design requires all three building blocks of an embedded device – hardware, software and operating system – to work together synergistically. The lectures cover all the three aspects alongside their interactions from a low power design perspective in depth.

The lecture provides an overview of design methods, synthesis tools, estimation models, software techniques, operating system strategies, scheduling algorithms, etc., with the aim of minimizing the power consumption of embedded devices without compromising their performance. Both the research-relevant and industry-prevalent topics at different level of abstractions (from circuit to system) are discussed in this lecture.

Machine Learning 1 - Fundamental Methods

2511500, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Notes

The field of knowledge acquisition and machine learning is a rapidly expanding field of knowledge and the subject of numerous research and development projects. The acquisition of knowledge can take place in different ways. Thus a system can benefit from experiences already made, it can be trained, or it draws conclusions from extensive background knowledge.

The lecture covers symbolic learning methods such as inductive learning (learning from examples, learning by observation), deductive learning (explanation-based learning) and learning from analogies, as well as sub-symbolic techniques such as neural networks, support vector machines and genetic algorithms. The lecture introduces the basic principles and structures of learning systems and examines the algorithms developed so far. The structure and operation of learning systems is presented and explained with some examples, especially from the fields of robotics and image processing.

Learning obectives:

- Students acquire knowledge of the fundamental methods in the field of machine learning.
- Students can classify, formally describe and evaluate methods of machine learning.
- Students can use their knowledge to select suitable models and methods for selected problems in the field of of machine learning.

Machine Learning 2 - Advanced methods 2511502, SS 2019, 2 SWS, Language: German, Open in study portal

Description

The field of machine decision-making and inference procedures, taking into account uncertainties and incomplete knowledge, is a rapidly expanding field of knowledge and the subject of numerous research and development projects.

The focus of this lecture is on the embedding and application of machine-learning methods in decision and inference systems starting with methods of dimension reduction, feature selection/evaluation via semi-supervised learning to methods of probabilistic inference (e.g. Dempster Shafer information fusion, dynamic and object-oriented Bayesian networks, POMDP, etc).

The lecture introduces the basic principles and structures and explains algorithms developed so far. The structure and operation of the procedures and methods are presented and explained using a number of application scenarios, in particular from the field of technical (semi-)autonomous systems.

Notes

The first exercise will take place on 08.05.2019.

Learning Content

The subject area of ??machine intelligence and, in particular, machine learning, taking into account real challenges of complex application domains, is a rapidly expanding field of knowledge and the subject of numerous research and development projects.

The lecture "Machine Learning 2" deals with advanced methods of machine learning such as semi-supervised and active learning, deep neural networks (deep learning), pulsed networks, hierarchical approaches, e.g. As well as dynamic, probabilistic relational methods. Another focus is the embedding and application of machine learning methods in real systems.

The lecture introduces the latest basic principles as well as extended basic structures and elucidates previously developed algorithms. The structure and the mode of operation of the methods and methods are presented and explained by means of some application scenarios, especially in the field of technical (sub) autonomous systems (robotics, neurorobotics, image processing, etc.).

Management Accounting 1

2579900, SS 2019, 2 SWS, Language: English, Open in study portal

Notes

see Module Handbook

Learning Content

The course covers topics in management accounting in a decision-making framework. Some of these topics in the course MA1 are: short-term planning, investment decisions, budgeting and activity-based costing.

We will use international material written in English.

We will approach these topics primarily from the perspective of the users of financial information (not so much from the controller who prepares the information).

The course builds on an introductory level of understanding of accounting concepts from Business Administration courses in the core program. The course is intended for students in Industrial Engineering.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Literature

Lecture (V)

Notes

The course covers topics in management accounting in a decision-making framework. Some of these topics in the course MA2 are: cost estimation, product costing and cost allocation, financial performance measures, transfer pricing, strategic performance measurement systems and customer value propositions.

We will use international material written in English.

We will approach these topics primarily from the perspective of the users of financial information (not so much from the controller who prepares the information).

The course builds on an introductory level of understanding of accounting concepts from Business Administration courses in the core program. The course is intended for students in Industrial Engineering.

Learning objectives:

• Students have an understanding of theory and applications of management accounting topics. They can use financial information for various purposes in organizations.

Recommendations:

• It is recommended to take part in the course "Management Accounting 1" before this course.

Workload:

• The total workload for this course is approximately 135.0 hours. For further information see German version.

Lecture (V)

Description

The ongoing advancements in information technology have revolutionized traditional business processes and given rise to electronic marketplaces. In contrast to physical marketplaces, electronic markets do not just evolve, but must be carefully designed, implemented and monitored and evaluated. Moreover electronic markets demand open and flexible platforms as well as adequate standards and information services. Future Market Engineers must therefore be able to consider the economic, legal and technological dimension of markets simultaneously. The lecture focuses on the discussion of (1) Microstructure, (2) IT Infrastructure, and (3) Business Structure of electronic markets. Hence, students will be taught the economic incentives that a market can impose on market participants, development models for implementing markets, and business models for the application of markets.

Learning Content

Within the lecture, essential statistical methods for measuring customer attitudes (e.g. satisfaction measurement), understanding customer behavior and making strategic decisions will be discussed. The practical use as well as the correct handling of different survey methods will be taught, such as experiments and surveys. To analyze the collected data, various analysis methods are presented, including hypothesis tests, factor analyses, cluster analyses, variance and regression analyses. Building on this, the interpretation of the results will be discussed.

Topics addressed in this course are for example:

- Theoretical foundations of market research
- Statistical foundations of market research
- Measuring customer attitudes
- Understanding customer reactions
- Strategical decision making

Annotation

For further information please contact Marketing & Sales Research Group (marketing.iism.kit.edu).

7 COURSES

Workload

The total workload for this course is approximately 135.0 hours. Presence time: 30 hours Preparation and wrap-up of the course: 45.0 hours Exam and exam preparation: 60.0 hours

Literature

Homburg, Christian (2016), Marketingmanagement, 6th. ed., Wiesbaden.

7.211 Course: Marketing Analytics [T-WIWI-103139]

Responsible: Prof. Dr. Martin Klarmann

Organisation: KIT Department of Economics and Management

Part of: M-WIWI-101647 - Data Science: Evidence-based Marketing

Type	Credits	Recurrence	Version	
Written examination	4,5	Each winter term	4	

Events					
WS 19/20	2572170	Marketing Analytics	2 SWS	Lecture (V)	Klarmann
WS 19/20	2572171		1 SWS	Practice (Ü)	Halbauer
Exams					
WS 19/20	7900082	Marketing Analytics		Prüfung (PR)	Klarmann

Competence Certificate

The assessment consists of a written exam (60 min) (according to Section 4(2), 1 of the examination regulation)

Prerequisites

The prerequisite for taking the course is the successful completion of the course Market Research [2571150].

Recommendation

It is strongly recommended to complete the course Market Research prior to taking the Marketing Analytics course.

Annotation

For further information please contact the Marketing and Sales Research Group (marketing.iism.kit.edu).

Exchange students can bypass the requirement of passing Market Research if they can prove that they possess sufficient statistical knowledge based on courses attended at their home institution. This will be examined individually by the Marketing & Sales Research Group.

Below you will find excerpts from events related to this course:

Marketing Analytics

2572170, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

In this course various relevant market research questions are addressed, as for example measuring and understanding customer attitudes, preparing strategic decisions and sales forecasting. In order to analyze these questions, students learn to handle social media data, panel data, nested observations and experimental design. To analyze the data, advanced methods, as for example multilevel modeling, structural equation modeling and return on marketing models are taught. Also, problems of causality are addressed in-depth. The lecture is accompanied by a computer-based exercise, in the course of which the methods are applied practically.

Annotation

For further information please contact the Marketing and Sales Research Group (marketing.iism.kit.edu).

Exchange students can bypass the requirement of passing Market Research if they can prove that they possess sufficient statistical knowledge based on courses attended at their home institution. This will be examined individually by the Marketing & Sales Research Group.

Workload

Total workload for 4.5 ECTS: ca. 135 hours

Annotation

Please note that only one of the courses from the election block can be chosen in the module.

Please note: The number of participants for this course is limited. The Marketing and Sales Research Group typically provides the possibility to attend a course with 1.5 ECTS points in the respective module to all students. Participation in a specific course cannot be guaranteed.

In order to participate in this course, you need to apply. Applications are usually accepted at the start of the lecture period in summer term. Detailed information on the application process is usually provided on the website of the Marketing and Sales Research Group (marketing.iism.kit.edu) shortly before the lecture period in summer term starts.

Below you will find excerpts from events related to this course:

Marketing Strategy Business Game

2571183, SS 2019, 1 SWS, Language: German, Open in study portal

Block (B)

Learning Content

Using Markstrat, a marketing strategy business game, students work in groups representing a company that competes on a simulated market against the other groups' companies.

Annotation

Recommendation

Basic knowledge of micro- and macroeconomics is assumed, as taught in the courses Economics I [2600012] and Economics II [2600014]. Further, it is assumed that students have interest in using quantiative-mathematical methods.

Below you will find excerpts from events related to this course:

Methods in Economic Dynamics

2560240, SS 2019, SWS, Language: German, Open in study portal

Learning Content

The workshop offers the possibility to deepen the understanding about different aspects of theoretical modelling of innovationbased growth and induced economic effects. This includes the implementation of formal models in computer algebra systems as well as recording, processing and econometric analysis of related data from relational databases (concerning for example patents or trademarks). Moreover, methods of network theory are discussed.

Annotation

The course has been added summer 2015.

Workload

The total workload for this course is approximately 45 hours.

Lecture: 15h Preparation of lecture/exam: 30h Lecture (V)

Competence Certificate

Alternative exam assessments (§4(2), 3 SPO). The final grade is composed 75% of the grade of the written paper and 25% of the grade of the presentation.

Prerequisites

None.

Recommendation

Prior attendance of the course "Innovation Management: Concepts, Strategies and Methods" is recommended.

Below you will find excerpts from events related to this course:

Methoden im Innovationsmanagement

2545107, WS 19/20, 2 SWS, Language: German, Open in study portal

Seminar (S)

Notes

The seminar "Methods in Innovation Management" aims at the discussion and development of different methods for the structured generation of ideas in selected contexts. In a block seminar, methods and contexts are discussed, from which seminar topics are defined with the participants. These topics are to be worked on independently using methods and procedures. The results will be presented at a presentation date and then a written seminar paper will be prepared. This means that creativity methods and their combination will be presented and applied. The methods are worked on in a structured form and process-like sequence in order to clarify the advantages and disadvantages of different methods.

7.219 Course: Mixed Integer Programming I [T-WIWI-102719]

Responsible:	Prof. Dr. Oliver Stein
Organisation:	KIT Department of Economics and Management
Part of:	M-WIWI-101473 - Mathematical Programming M-WIWI-102832 - Operations Research in Supply Chain Management M-WIWI-103289 - Stochastic Optimization

Written examination	4,5	Irregular	1	

Events					
WS 19/20	2550138	Mixted Integer Programming I	SWS	Lecture (V)	Stein
WS 19/20	2550139	Exercises Mixted Integer Programming I	SWS	Practice (Ü)	Stein

Competence Certificate

The assessment of the lecture is a written examination (60 minutes) according to §4(2), 1 of the examination regulation.

The examination is held in the semester of the lecture and in the following semester.

Prerequisite for admission to the written examination is attaining at least 30% of the exercise points. Therefore the online-registration for the written examination is subject to fulfilling the prerequisite.

The examination can also be combined with the examination of *Mixed Integer Programming II* [25140]. In this case, the duration of the written examination takes 120 minutes.

Prerequisites

None

Recommendation

It is strongly recommended to visit at least one lecture from the Bachelor program of this chair before attending this course.

Annotation

The lecture is offered irregularly. The curriculum of the next three years is available online (kop.ior.kit.edu).

Below you will find excerpts from events related to this course:

Mixted Integer Programming I

2550138, WS 19/20, SWS, Open in study portal

Lecture (V)

Learning Content

Many optimization problems from economics, engineering and natural sciences are modeled with continuous as well as discrete variables. Examples are the energy minimal design of a chemical process in which several reactors may be switched on or off, or the time minimal covering of a distance with a vehicle equipped with a gear shift. While optimal points can be defined straightforwardly, for their numerical identification an interplay of ideas from discrete and continuous optimization is necessary.

The lecture treats methods for the numerical solution of linear optimization problems which depend on continuous as well as discrete variables. It is structured as follows:

- Existence results and concepts of linear as well as convex optimization
- LP relaxation and error bounds for rounding
- Gomory's cutting plane method
- Benders decomposition

Part II of the lecture treats nonlinear mixed integer programs.

The lecture is accompanied by computer exercises in which you can learn the programming language MATLAB and implement and test some of the methods for practically relevant examples.

SS 2019	2540471	Übung zu Modeling and Analyzing Consumer Behaviour with R	1 SWS	Practice (Ü)	Knierim, Greif- Winzrieth
Exams					
SS 2019	7901391	Modeling and Analyzing Consumer I with R	Behavior	Prüfung (PR)	Weinhardt
SS 2019	79791391	Modeling and Analyzing Consumer I with R	Behavior	Prüfung (PR)	Weinhardt

Competence Certificate

The assessment consists of a written exam (60 min) (according to §4(2), 1 of the examination regulations). By successful completion of the exercises (§4 (2), 3 SPO 2007 respectively §4 (3) SPO 2015) a bonus can be obtained. If the grade of the written exam is at least 4.0 and at most 1.3, the bonus will improve it by one grade level (i.e. by 0.3 or 0.4).

Prerequisites

None

Recommendation

None

Annotation Number of participants limited.

Below you will find excerpts from events related to this course:

Modeling and Analyzing Consumer Behavior with R

2540470, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

Students learn the fundamental methods, algorithms and concepts for analysing consumer data. The students deepen their knowledge in working on a case study and computer exercises, especially in the areas of e-commerce and behavioural economics. In addition, students learn to write applications in R and to organize and execute larger data mining and general data analytics projects. Furthermore, students learn methods for evaluating and visualizing data.

The event will focus on the following topics:

- 1. basic programming concepts in R
- 2. data mining with R using established process models such as CRISP-DM
- 3. text mining and analysis of online data with R
- ${\bf 4.}$ working on a case study from the area of Consumer and User Analytics
- 5. data visualization and evaluation with R

Annotation

The course has been added summer term 2015.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Events					
WS 19/20	2550490	Modellieren und OR-Software: Fortgeschrittene Themen	3 SWS	Practical course (P)	Pomes, Zander, Bakker

Competence Certificate

The assessment is a 120 minutes examination, including a written and a practical part (according to §4(2), 1 of the examination regulation).

The examination is held in the term of the software laboratory and the following term.

Prerequisites

None.

Recommendation

Basic knowledge as conveyed in the module Introduction to Operations Research is assumed.

Successful completion of the course Modeling and OR-Software: Introduction.

Annotation

Due to capacity restrictions, registration before course start is required. For further information see the webpage of the course. The lecture is held in every term. The planned lectures and courses for the next three years are announced online.

Below you will find excerpts from events related to this course:

,	Modellieren und OR-Software: Fortgeschrittene Themen	Practical course (P)
	2550490, WS 19/20, 3 SWS, Language: German, Open in study portal	

Learning Content

The advanced course is designated for Master students that already attended the introductory course or gained equivalent experience elsewhere, e.g. during a seminar or bachelor thesis.

We will work on advanced topics and methods in OR, among others cutting planes, column generation and constraint programming. The Software used for the exercises is IBM ILOG CPLEX Optimization Studio. The associated modelling programming languages are OPL and ILOG Script.

Annotation

The lecture is for Master students who have already attended the introduction or have achieved comparable knowledge e.g. in a Bachelor thesis.

Interested students are requested to send an e-mail to Anika Pomes (anika.pomes@kit.edu) from now until 29.09.2019, including the Bachelor's and the current Master's grade transcripts. If the introduction has not been checked, please let us know how the necessary knowledge has been obtained.

For further information see the webpage of the course.

The lecture is offered in every winter term. The planned lectures and courses for the next three years are announced online.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Natural Language Processing and dialog modeling

Lecture (V)

2400007, WS 19/20, 2 SWS, Language: German, Open in study portal

Description

In order that we can communicate with a computer successfully, it has to be able to interpret sentences like "I don't understand what you mean by this!". For that it has to know what "to not understand" means and what "by this" refers to.

This lecture gives an overview of different subject areas and applied methods in Natural Language Processing (NLP) and dialog modeling. Concerning NLP, the covered topics will vary in complexity such as Part-of-Speech Tagging, Sentiment Analysis, Word Sense Disambiguation (WSD) and Question Answering (QA).

At the same time, various techniques will be presented with which the corresponding components can be realized. Among those are Conditional Random Fields (CRFs) and Maximum Entropy Models (MaxEnt).

Furthermore, topics and methods of NLP will be emphasized which are especially relevant for realizing spoken dialog systems. In Dialog Modeling different areas like Social Dialog, Goal-Oriented Dialog, Multimodal Dialog and Error Handling will be addressed. These involve additional techniques like Partially Observable Markov Decision Processes (POMDPs).

Competence Certificate

The assessment consits of a written exam (60 minutes) according to Section 4(2), 1 of the examination regulation and possibly of a compulsory prerequisite.

The exam takes place in the semester of the lecture and in the following semester.

The examination can also be combined with the examination of *Nonlinear OptimizationII*[2550113]. In this case, the duration of the written examination takes 120 minutes.

Prerequisites

The module component exam T-WIWI-103637 "Nonlinear Optimization I and II" may not be selected.

Annotation

Part I and II of the lecture are held consecutively in the same semester.

Below you will find excerpts from events related to this course:

Nonlinear Optimization I

2550111, WS 19/20, 2 SWS, Open in study portal

Learning Content

The lecture treats the minimization of smooth nonlinear functions under nonlinear constraints. For such problems, which occur very often in economics, engineering, and natural sciences, we derive optimality conditions that form the basis for numerical solution methods. The lecture is structured as follows:

- Introduction, examples, and terminology
- Existence results for optimal points
- First and second order optimality condtions for unconstrained problems
- Optimality conditions for unconstrained convex problems
- Numerical methods for unconstrained problems (line search, steepest descent method, variable metric methods, Newton method, Quasi Newton methods, CG method, trust region method)

Constrained problems are the contents of part II of the lecture.

The lecture is accompanied by computer exercises in which you can learn the programming language MATLAB and implement and test some of the methods for practically relevant examples.

Annotation

Part I and II of the lecture are held consecutively in the same semester.

Operations Research in Supply Chain Management

Lecture (V)

2550480, SS 2019, 2 SWS, Language: English, Open in study portal

Learning Content

Supply Chain Management constitutes a general tool for logistics process planning in supply networks. To an increasing degree quantitative decision support is provided by methods and models from Operations Research. The lecture "OR in Supply Chain Management" conveys concepts and approaches for solving practical problems and presents an insight to current research topics. The lecture's focus is set on modeling and solution methods for applications originating in different domains of a supply chain. The emphasis is put on mathematical methods like mixed integer programming, valid inequalities or column generation, and the derivation of optimal solution strategies.

In form and content, the lecture addresses all levels of Supply Chain Management: After a short introduction, the tactical and operational level will be discussed with regard to inventory models, scheduling as well as cutting and packing. The strategic level will be discussed in terms of layout planning. Another main focus of the lecture is the application of methods from online optimization. This optimization discipline has gained more and more importance in the optimization of supply chains over the several past years due to an increasing amount of dynamic data flows.

Annotation

The course is offered irregularly. Planned lectures for the next three years can be found in the internet at http://dol.ior.kit.edu/english/Courses.php.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Competence Certificate

The assessment of the lecture is a written examination (60 minutes) according to §4(2), 1 of the examination regulation. The examination is held in the semester of the lecture and in the following semester.

Prerequisite for admission to the written examination is attaining at least 30% of the exercise points. Therefore the online-registration for the written examination is subject to fulfilling the prerequisite.

Prerequisites

None

Recommendation

It is strongly recommended to visit at least one lecture from the Bachelor program of this chair before attending this course.

Annotation

The lecture is offered irregularly. The curriculum of the next three years is available online (www.ior.kit.edu).

Pattern Recognition

24675, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description Features:

- types of features
- exploration of the feature space
- transformation of the features
- distance measures within the feature space
- normalization of features
- selection and construction of features
- reduction of the dimension of the feature space

Classifiers:

- Bayesian decision theory
- parameter estimation
- parameter free methods
- linear classifiers
- support vector machine
- template matching, matched filter
- classification with rejection
- classification with regard to nominal features

General principles:

- Vapnik-Chervonenkis theory
- evaluation of classifiers
- boosting

Exams						
SS 2019	7900283	Personalization and Services	Personalization and Services		Geyer-Schulz	

Competence Certificate

Written examination (60 minutes) according to §4(2), 1 SPO. The exam is considered passed if at least 50 out of a maximum of 100 possible points are achieved. The grades are graded in five steps (best grade 1.0 from 95 points). Details of the grade formation and scale will be announced in the course.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the course.

Prerequisites None

Personalization & Services

2540533, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

- Personalization of Services and Applications
- User Modeling
- User Profiles
- Authentification
- Authorization
- Applications in e-Commerce and for internet-based Services
- Personalized Web Search
- Privacy

Workload

The total workload for this course is approximately 135 hours (4.5 credits):

Time of attendance

- Attending the lecture: 15 x 90min = 22h 30m
- Attending the exercise classes: 7 x 90min = 10h 30m
- Examination: 1h 00m

Self-study

- Preparation and wrap-up of the lecture: 15 x 180min = 45h 00m
 Preparing the exercises: 25h 00m
- Preparation of the examination: 31h 00m •

Sum: 135h 00m

Literature

The course follows latest scientific papers. References to these papers are listed at the end of each course unit.

Competence Certificate

The assessment consists of a written exam (90 minutes) (following §4(2), 1 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites None

Recommendation

None

Below you will find excerpts from events related to this course:

Planning and Management of Industrial Plants

2581952, WS 19/20, 2 SWS, Language: German, Open in study portal

Learning Content

Industrial plant management incorporates a complex set of tasks along the entire life cycle of an industrial plant, starting with the initiation and erection up to operating and dismantling.

During this course students will get to know special characteristics of industrial plant management. Students will learn important methods to plan, realize and supervise the supply, start-up, maintenance, optimisation and shut-down of industrial plants. Alongside, students will have to handle the inherent question of choosing between technologies and evaluating each of them. This course pays special attention to the specific characteristics of plant engineering, commissioning and investment.

Workload

Total effort required will account for approximately 165h (5.5 credits).

Literature

will be announced in the course

Lecture (V)

7.254 Course: Portfolio and Asset Liability Management [T-WIWI-103128]

Practical Introduction in Hardware Security

2400009, SS 2019, 4 SWS, Language: English, Open in study portal

Lecture / Practice (VÜ)

Description

Security is a major concern for a variety of domains like embedded and cyber-physical systems in which threats in hardware and software components may pose catastrophic consequences. Software security has been studied extensively, since the majority of security attacks were typically at the software level. However, currently hardware becomes the Achilles heel for on-chip system security as recent events show. There is evidence of hardware security breaches and hence, there is a growing emphasize in hardware security from academic, industry, and government sectors. In this regard, physical attacks, side-channel analysis and fault-injection attacks for security-enabled application domains is becoming a real-world challenge.

Notes

4 SWS / 6 ECTS = 180h

Learning Content

1. Hardware security primitives (PUF, TRNG)

- 2. Hardware Implementation of encryption modules (AES)
- 3. Passive Attack with side channel (on AES)
- 4. Active fault attack (on simple circuits, if feasible also on AES)

Workload

Each slot will be 1.5h + 1.5h, and will be done at CDNC lab once per week. In the first 1.5h either the lecture is presented, the lab assignment is explained or the students present assignment results, depending the schedule of that week. The second 1.5h will be used by the students to continue on implementing the assignment.

Annotation

New course title starting summer term 2017: "Practical Seminar Digital Service Systems". The current range of seminar topics is announced on the KSRI website www.ksri.kit.edu.

Below you will find excerpts from events related to this course:

Practical Seminar: Information Systems & Service Design 2540554, SS 2019, 3 SWS, Open in study portal

Lecture (V)

Description

Contemporary trends of every increasing digitalization in businesses lead to new challenges and fusion of technologies blurring the lines between the digital, physical and biological spheres, thereby calling for a new approaches for corporate management. Recently, physician Michio Kaku put it like the following: "The destiny of computers – like other mass technologies like electricity, paper, and running water- is to become invisible, that is, to disappear into the fabric of our lives, to be everywhere and nowhere, silently and seamlessly carrying out our wishes." Michio Kaku (2016)

In the Practical Seminar Digital Service Design students address a real-world challenge in businesses and apply digital service design practices and tools. Furthermore, during the time of the seminar the students prototypical implement a running digital service.

Real-world challenges will vary over time. This time, the challenges are from the domain of **Future Corporate Management**. The practical seminar is carried out in close cooperation with SAP SE and leverages state-of-the-art digital platforms for prototyping.

Learning Content

- Foundations
- Digital Service Design Challenges in Future Corporate Management
- Basics of Digital Service Design practices and tools
- Prototyping and development Digital Services
- Delivering digital service prototypes

Competence Certificate

The assessment of this course is according to §4(2), 3 SPO in form of an examination of the written seminar thesis, a presentation and a project. The final mark is based on the examination of the written seminar thesis and the project but can be upgraded or downgraded according to the quality of the presentation.

Prerequisites

None

Recommendation

Knowledge of algorithms in the area of knowledge discovery is assumed. Therefore it is recommended to attend the course [2511302] Knowledge Discovery beforehand.

7.291 Course: Practical Seminar Service Innovation [T-WIWI-102799] Responsible: Prof. Dr. Gerhard Satzger Organisation: KIT Department of Economics and Management Part of: M-WIWI-101410 - Business & Service Engineering M-WIWI-102806 - Service Innovation, Design & Engineering

Competence Certificate

The assessment of this course is according to §4(2), 3 SPO in form of a written documentation, a presentation of the outcome of the conducted practical components and an active participation in class.

Please take into account that, beside the written documentation, also a practical component (such as a survey or an implementation of an application) is part of the course. Please examine the course description for the particular tasks.

The final mark is based on the graded and weighted attainments (such as the written documentation, presentation, practical work and an active participation in class).

Prerequisites

None

Recommendation

Knowledge of Service Innovation Methods is assumed. Therefore it is recommended to attend the course Service Innovation [2540468] beforehand.

Annotation

Due to the project work, the number of participants is limited and participation requires knowledge about models, concepts and approaches that are taught in the Service Innovation lecture. Having taken the Service Innovation lecture or demonstrating equivalent knowledge is a prerequisite for participating in this Practical Seminar. Details for registration will be announced on the web pages for this course.

The seminar is not offered regularly.

7.292 Course: Practical Seminar: Advanced Analytics [T-WIWI-108765] Т **Responsible:** Prof. Dr. Christof Weinhardt Organisation: KIT Department of Economics and Management Part of: M-WIWI-103118 - Data Science: Data-Driven User Modeling Туре Credits Recurrence Version Examination of another type 4,5 Each term 1 Exams SS 2019 7900211 Weinhardt Practical Seminar: Advanced Analytics Prüfung (PR)

Competence Certificate

The assessment consists of practical work in the field of advanced analytics, a seminar paper, a presentation of the results and the contribution to the discussion (according to \$4(2), 3 of the examination regulation). The final grade is based on the evaluation of each component (seminar paper, oral presentation, and active participation).

Prerequisites

None

Recommendation

At least one module offered by the institute should have been chosen before attending this seminar.

Annotation

The course is held in English. The course is not offered regularly.

7.294 Course: Practical Seminar: Health Care Management (with Case Studies) [T-WIWI-102716]

Prof. Dr. Stefan Nickel **Responsible:**

Organisation: KIT Department of Economics and Management Part of:

M-WIWI-102805 - Service Operations

Events					
SS 2019	2550498	Practical seminar: Health Care Management	5 SWS		Nickel, Reuter- Oppermann
Exams					
SS 2019	7900014	Practical Seminar: Health Care Management (with Case Studies)		Prüfung (PR)	Nickel

Competence Certificate

Due to a research semester of Professor Nickel in WS 19/20, the courses Location Planning and Strategic SCM and Practice Seminar: Health Care Management do NOT take place in WS 19/20. Please also refer to the information at https://dol.ior.kit.edu/ Lehrveranstaltungen.php for further details.

The assessment consists in a case study, the writing of a corresponding paper, and an oral exam (according to §4(2), 2 of the examination regulation).

Prerequisites

None.

Recommendation

Basic knowledge as conveyed in the module Introduction toOperations Research is assumed.

Annotation

The credits have been reduced to 4,5 starting summer term 2016.

The lecture is offered every term.

The planned lectures and courses for the next three years are announced online.

Below you will find excerpts from events related to this course:

Practical seminar: Health Care Management

2550498, SS 2019, 5 SWS, Language: German, Open in study portal

Learning Content

Processes in a hospital are often grown historically ("We have always done it this way"), so that there has not been the need to analyze processes until reforms of the health system have put increasing pressure on hospitals. Consequently, nowadays hospitals look for possibilities to improve their processes. The students are confronted with case studies and are asked to develop a solution. Therefore they have to collect and analyze relevant data, processes and structures. When developing the solution the students have to bear in mind that besides the economic efficiency also the quality of care and patient satisfaction (e.g. measured in waiting time) may not be neglected in the health care sector.

Annotation

The lecture is offered every term.

The planned lectures and courses for the next three years are announced online.

Workload

The total workload for this course is approximately 135 hours. For further information see German version.

7.296 Course: Predictive Mechanism and Market Design [T-WIWI-102862]

Responsible:	Prof. Dr. Johannes Philipp Reiß	
Organisation:	KIT Department of Economics and Management	
Part of:	M-WIWI-101453 - Applied Strategic Decisions	
	M-WIWI-101505 - Experimental Economics	

Events					
WS 19/20	2520402	Predictive Mechanism and Market Design	2 SWS	Lecture (V)	Reiß
WS 19/20	2520403		SWS	Practice (Ü)	Reiß

Competence Certificate

The assessment consists of a written exam (60 minutes) (following §4(2), 1 of the examination regulation).

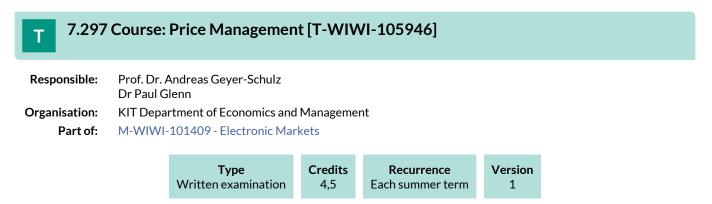

Prerequisites

None

Annotation

The course is given every second fall term, e.g., WS2017/18, WS2019/20, ...

The retake exam is given in the summer term subsequent to the fall term where the course (lecture and final exam) is given.

Competence Certificate

Lecture and exam will not be offered in summer semester 2019. The next examination is in the summer semester 2020.

Written examination (60 minutes) according to §4(2), 1 SPO. The exam is considered passed if at least 50 out of a maximum of 100 possible points are achieved. The grades are graded in five steps (best grade 1.0 from 95 points). Details of the grade formation and scale will be announced in the course.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the course.

Prerequisites None

Recommendation None

Annotation

The lecture is offered for the first time in summer term 2016.

T 7.298 Course: Price Negotiation and Sales Presentations [T-WIWI-102891]

Responsible:	Prof. Dr. Martin Klarmann Mark Schröder
Organisation:	KIT Department of Economics and Management
Part of:	M-WIWI-101487 - Sales Management

Events					
WS 19/20	2572198	Price Negotiation and Sales Presentations	1 SWS	Block (B)	Klarmann, Schröder

Competence Certificate

This alternative exam assessment consists of a presentation with a subsequent discussion totalling 25 minutes. Moreover learning contents are checked by realistic 30-minute price negotiations.

Prerequisites

None

Recommendation

None

Annotation

Participation requires an application. The application period starts at the beginning of the semester. More information can be obtained on the website of the research group Marketing & amp; Sales (marketing.iism.kit.edu).

Access to this course is restricted. Typically all students will be granted the attendance of one course with 1.5 ECTS. Nevertheless attendance can not be guaranteed.

For further information please contact Marketing and Sales Research Group (marketing.iism.kit.edu).

Please note that only one of the courses from the election block can be attended in the module.

Below you will find excerpts from events related to this course:

Price Negotiation and Sales Presentations

2572198, WS 19/20, 1 SWS, Language: German, Open in study portal

Block (B)

Learning Content

At first, theoretical knowledge about the behavior in selling contexts is discussed. Then, in a practical part, students will apply this knowledge in their own price negotiations.

Annotation

- In order to participate in this course, you need to apply. Applications are usually accepted at the start of the lecture period in winter term. Detailed information on the application process is usually provided on the website of the Marketing and Sales Research Group (marketing, iism, kit.edu) shortly before the lecture period in winter term starts.
- Please note that only one of the following courses can be chosen in the Sales Management Module: Country Manager Simulation, Case Studies in Sales and Pricing or Preisverhandlungen und Verkaufspräsentationen.
- Please note: The number of participants for this course is limited. The Marketing and Sales Research Group typically provides the possibility to attend a course with 1,5 ECTS in the respective module to all students. Participation in a specific course cannot be guaranteed.

Workload

The total workload for this course is approximately 45.0 hours. For further information see German version.

Grundlagen der Automatischen Spracherkennung

24145, WS 19/20, 4 SWS, Language: German, Open in study portal

Lecture (V)

Description

This class explains the layout of state-of-the-art speech recognition systems. The layout will be motivated based on the human speech production process und its properties. The class treats all processing steps of automatic speech recognition systems in detail: signal pre-processing, training of suitable, statistical models, and the actual recognition process. The focus will be on statistical methods, as they are being used in current speech recognition systems. In this way the state-of-the-art of the area of automatic speech recognition will be communicated. Further the class will introduce alternative Methods, which were the foundation of the current methods and which are still being used in special circumstances. Using sample applications und examples from current research projects, the current state-of-the-art and the performance of current systems will be illustrated.

None

Below you will find excerpts from events related to this course:

Production and Logistics Management

2581954, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

This course covers central tasks and challenges of an operative production and logistics management. Students get to know the set-up and mode of operation of planning systems such as PPS-, ERP- and Advanced Planning Systems to cope with the accompanying planning tasks. Methods to solve these tasks will be explored with respect to manufacturing program planning, material and time. Alongside to MRP II, students will be introduced to integrated supply chain management approaches in PPS. Finally, commercially available PPS-, ERP- and Advanced Planning Systems will be presented and discussed.

Learning Content

This course covers central tasks and challenges of operational production and logistics management. Systems analytically, central planning tasks are discussed. Exemplary solution approaches for these tasks are presented. Further practical approaches are explained. Students get to know the set-up and mode of operation of planning systems such as PPS-, ERP- and Advanced Planning Systems to cope with the accompanying planning tasks. Alongside to MRP II, students will be introduced to integrated supply chain management approaches in Supply Chain Management.

Workload

Total effort required will account for approximately 165h (5.5 credits).

Literature

will be announced in the course

7.303 Course: Project Lab Cognitive Automobiles and Robots [T-WIWI-109985]

Responsible:Prof. Dr.-Ing. Johann Marius ZöllnerOrganisation:KIT Department of Economics and ManagementPart of:M-WIWI-103356 - Machine Learning

Exams								
WS 19/20	7900107	Advanced Lab Cognitive Automobile and Robots		Prüfung (PR)	Zöllner			

Competence Certificate

The alternative exam assessment consists of:

- a practical work
- a presentation and
- a written seminar thesis

Details of the grade formation will be announced at the beginning of the course.

Prerequisites

None

Below you will find excerpts from events related to this course:

Project lab Cognitive automobiles and robots

2512501, WS 19/20, 3 SWS, Language: German/English, Open in study portal

Practical course (P)

Notes Learning objectives:

- Students can practically apply knowledge from the Machine Learning lecture in a selected field of current research in robotics or cognitive automobiles.
- The students master the analysis and solution of corresponding problems in the team.
- The students can evaluate, document and present their concepts and results.

Workload:

The workload of 4.5 credits consists of time of attendance at the test site for the practical implementation of the chosen solution, as well as the time for literature research and planning / specification of the planned solution. In addition, a short report and a presentation of the work carried out will be prepared.

7.304 Course: Project Lab Machine Learning [T-WIWI-109983]

Below you will find excerpts from events related to this course:

Project Lab: Image Analysis and Fusion

24299, WS 19/20, 4 SWS, Open in study portal

Learning Content

The practical course is closely connected to the lectures of the Vision and Fusion Laboratory (Lehrstuhl für Interaktive Echtzeitsysteme): Automated Visual Inspection and Image Processing, Pattern Recognition, Introduction to Information Fusion and Probabilistische Planung.

The projects change every year. The corresponding application fields are among others:

- deflectometry reconstruction of specular surfaces
- camera array for multivariate scene reconstruction
- image processing for driver assistance systems
- distributed vehicle cooperation
- localization and map generation for mobile robots
- systems theory of security for danger analysis
- local approaches for information fusion
- multimodal man-machine interaction

During the first meeting that will take place in the beginning of the semester an overview of the currently offered projects will be given. An introductory workshop "Introduction to project management" will give some hints for further proceeding.

In the course of the project the participants will create a project plan based on which they will individually complete the assigned work packages.

In the course of the semester, three presentations have to be held:

- Presentation of the project plan
- Intermediate state presentation
- Presentation of results

The results have to be documented.

Two weeks before the intermediate presentation, a second workshop, "Introduction to an effective presentation" will take place. The attendance of the both workshops as well as all the presentations is mandatory.

Provable Security in Cryptography

24166, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

When is an encryption scheme secure? What type of security is guaranteed by a digital signature scheme? How can secure cryptographic systems be constructed? These and more questions are the topic of this lecture. We put particular emphasis on concrete examples: we will present several cryptographic schemes (such as encryption schemes) and analyze their security properties. In this, the notion of a security proof will play a central role. We endeavour to find mathematical proofs that a given system achieves certain desirable properties under well-defined complexity-theoretic assumptions.

Basic knowledge of Public Finance is required.

Below you will find excerpts from events related to this course:

Public Management

2561127, WS 19/20, 3 SWS, Language: German, Open in study portal

Lecture / Practice (VÜ)

Learning Content

The lecture "Public Management" deals with the economic theory of public sector administration. It is divided into four parts. The first section gives an overview of the legal framework of governmental administration in the Federal Republic of Germany and introduces the classical theory of administration as developed by Weber. Part two studies concepts of public decision-making, which have a significant impact on the operation of public sector administrations and where one focus is on consistency problems of collective decision-making. The third chapter deals with efficiency problems arising in conventionally organized public administrations and companies. X-inefficiency, information and control problems, the isolated consideration of income-spending-relations as well as rent-seeking problems will be considered. In section four the concept of New Public Management, which is a new approach to public sector administration that is mainly based in contract theory, is introduced. Its foundations in institutional economics are developed, with a focus on the specific incentive structures in self-administrations. Finally, the achievements of New Public Management approaches are discussed.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Public Revenues

2560120, SS 2019, 2 SWS, Language: German, Open in study portal

Description

The *Public Revenues* lecture is concerned with the theory and policy of taxation and public dept. In the first chapter, fundamental concepts of taxation theory are introduced, whereas the second chapter deals with key elements of the German taxation system. The allocative and distributive effects of different taxation types are examined in chapter three and four. Chapter five integrates both allocative and distributive components in order to derive a theory of optimal taxation. The core of the sixth chapter is represented by international aspects of taxation. The debt part begins with a description of the extent and structure of public dept in chapter seven. In the following chapter, macroeconomic theories of national dept are evolved, while chapter nine is concerned with its long term consequences when employed as a regular instrument of budgeting. Finally, the tenth chapter deals with constitutional limits to public debt-incurring.

Learning Content

Energy economics makes use of many quantitative methods in exploration and analysis of data as well as in simulations and modelling. This lecture course aims at introducing students of energy economics into the application of quantitative methods and techniques as taught in elementary courses to real problems in energy economics. The focus is mainly on regression, simulation, time series analysis and related statistical methods as applied in energy economics.

Workload

The total workload for this course is approximately 120 hours. For further information see German version.

Competence Certificate

Written examination (60 minutes) according to §4(2), 1 SPO. The exam is considered passed if at least 50 out of a maximum of 100 possible points are achieved. The grades are graded in five steps (best grade 1.0 from 95 points). Details of the grade formation and scale will be announced in the course.

A bonus can be acquired through successful participation in the practice. If the grade of the written examination is between 4.0 and 1.3, the bonus improves the grade by one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the course.

Prerequisites

None

Recommendation

None

Below you will find excerpts from events related to this course:

Recommender Systems

2540506, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

At first, an overview of general aspects and concepts of recommender systems and its relevance for service providers and customers is given. Next, different categories of recommender systems are discussed. This includes explicit recommendations like customer reviews as well as implicit services based on behavioral data. Furthermore, the course gives a detailed view of the current research on recommender systems at the Chair of Information Services and Electronic Markets.

Workload

The total workload for this course is approximately 135 hours (4.5 credits):

Time of attendance

- Attending the lecture: 15 x 90min = 22h 30m
- Attending the exercise classes: 7 x 90min = 10h 30m
- Examination: 1h 00m

Self-study

- Preparation and wrap-up of the lecture: 15 x 180min = 45h 00m
- Preparing the exercises: 25h 00m
- Preparation of the examination: 31h 00m

Sum: 135h 00m

Reliable Computing I

24071, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

The objective of this course is to become familiar with general and state of the art techniques used in design and analysis of faulttolerant digital systems. The students will study and investigate existing fault-tolerant systems. Both Hardware and software methods will be studied and new research topics will be investigated.

This course overviews reliable (fault-tolerant) computing and the design and evaluation of dependable systems, and provides a base for research in reliable systems. Models and methods are used in the analysis and design of fault-tolerant and highly reliable computer systems will be taught in this course. Topics include faults and their manifestations, fault/error modeling, reliability, availability and maintainability analysis, system evaluation, performance-reliability trade-offs, system level fault diagnosis, hardware and software redundancy techniques, and fault-tolerant system design methods.

Workload 2 SWS / 3 ECTS

7.322 Course: Requirements Engineering [T-INFO-101300]

Recommendation

Das Modul Softwaretechnik II wird empfohlen.

Below you will find excerpts from events related to this course:

Requirements Engineering

2400050, SS 2019, 2 SWS, Language: English, Open in study portal

Lecture (V)

Description

Having a good requirements specification is a critical prerequisite for any successful software project. This lecture gives an introduction to processes, methods and representation forms for specifying and managing requirements.

The topics include background and general overview, processes and methods for requirements elicitation, specification with natural language, object-oriented specification, use cases, UML, specification of quality requirements and constraints, as well as requirements validation and management.

Notes

General remarks: The lecture is held in English and all lecture material is in English. The lecture will be recorded and the recordings will be made available on the Ilias platform.

Workload

Two SWS (1.5 hours) of lecture per week in 15 weeks plus ca. 15 hours preparation for the exam = 90h

Literature

The lecture is based on slides and works by Martin Glinz, which is why there is no book that accompanies the lecture. Students are welcome to discuss differences between the lecture and the content of the course in class.

Main suggestion: Pohl, K. (2010). Requirements Engineering: Fundamentals, Principles, and Techniques. Springer Verlag. (will be available in library)

Recommendation

Prior attendance of the course Innovation Management is recommended.

Annotation

See German version.

Below you will find excerpts from events related to this course:

Roadmapping

2545102, SS 2019, 2 SWS, Language: German, Open in study portal

Learning Content

Roadmapping is a method used to support innovation decisions in the early phase of innovation management. The roadmapping process addresses the procedure of constructing roadmaps which can then be assessed. Roadmapping provides structured and graphical visualizations of preferably future-oriented topics which have innovation potentials. The benefits of the roadmapping method lie in the structured bundling of both technology- and market-driven individual topics and the joint setting of priorities and processes to achieve predetermined corporate targets. As a rule, roadmaps represent a consensus reached by the people involved in their compilation. For this reason, roadmaps are suited to the designation and initial prioritization of emerging technologies and corresponding development projects.

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Seminar (S)

Robotics II: Humanoid Robotics

2400074, SS 2019, 2 SWS, Language: German/English, Open in study portal

Lecture (V)

Learning Content

The lecture presents current work in the field of humanoid robotics that deals with the implementation of complex sensorimotor and cognitive abilities. In the individual topics different methods and algorithms, their advantages and disadvantages, as well as the current state of research are discussed.

The topics addressed are: biomechanical models of the human body, biologically inspired and data-driven methods of grasping, active perception, imitation learning and programming by demonstration as well as semantic representations of sensorimotor experience

Robotics III - Sensors and Perception in Robotics

Lecture (V)

2400067, SS 2019, 2 SWS, Language: German/English, Open in study portal

Learning Content

The lecture supplements the lecture Robotics I with a broad overview of sensors used in robotics. The lecture focuses on visual perception, object recognition, simultaneous localization and mapping (SLAM) and semantic scene interpretation. The lecture is divided into two parts:

In the first part a comprehensive overview of current sensor technologies is given. A basic distinction is made between sensors for the perception of the environment (exteroceptive) and sensors for the perception of the internal state (proprioceptive).

The second part of the lecture concentrates on the use of exteroceptive sensors in robotics. The topics covered include tactile exploration and visual data processing, including advanced topics such as feature extraction, object localization, simultaneous localization and mapping (SLAM) and semantic scene interpretation.

Sales Management and Retailing

2572156, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

The aim of the course "Sales Management and Retailing" is on the one hand to give insights into the challenging realization of a successful sales management and on the other hand to discuss peculiarities of retailing contexts. The contents are below others:

- Customer relationship management (word-of-mouth-analysis, key account management, loyalty programs, complain management etc.)
- Retail marketing (trends, point of sale design etc.)
- Retailer-producer relationships

Annotation

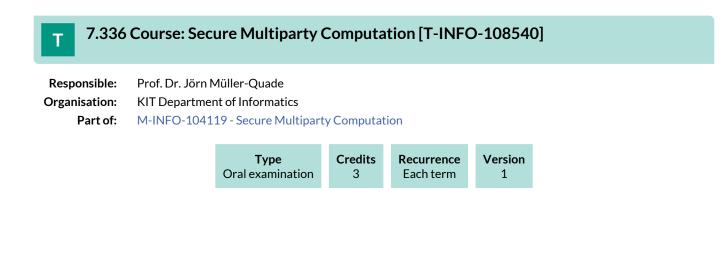

For further information please contact Marketing & Sales Research Group (marketing.iism.kit.edu). This course is held in English.

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Lectures on Informatics of the Bachelor on Information Systems (Semester 1-4) or equivalent are required.

Below you will find excerpts from events related to this course:

Semantic Web Technologies

2511310, SS 2019, 2 SWS, Language: English, Open in study portal

Description

The aim of the Semantic Web is to make the meaning (semantics) of data on the web usable in intelligent systems, e.g. in ecommerce and internet portals

Central concepts are the representation of knowledge in form of RDF and ontologies, the access via Linked Data, as well as querying the data by using SPARQL. This lecture provides the foundations of knowledge representation and processing for the corresponding technologies and presents example applications.

Learning Content

The following topics are covered:

- Resource Description Framework (RDF) and RDF Schema (RDFS)
- Web Architecture and Linked Data
- Web Ontology Language (OWL)
- Query language SPARQL
- Rule languages
- Applications

Lecture (V)

Workload

- The total workload for this course is approximately 150 hours
- Time of presentness: 45 hours
- Time of preperation and postprocessing: 67.5 hours
- Exam and exam preperation: 37.5 hours

Literature

Exercises to Semantic Web Technologies

2511311, SS 2019, 1 SWS, Language: English, Open in study portal

Practice (Ü)

Description

Multiple exercises are held that capture the topics, held in the lecture Semantic Web Technologies, and discuss them in detail. Thereby, practical examples are given to the students in order to transfer theoretical aspects into practical implementation.

Learning Content

The following topics are covered:

- Resource Description Framework (RDF) and RDF Schema (RDFS)
- Web Architecture and Linked Data
- Web Ontology Language (OWL)
- Query language SPARQL
- Rule languages
- Applications

Workload

The total workload for the lecture Semantic Web Technologiesis given out on the description of the lecture.

Competence Certificate

Alternative exam assessment (§ 4(2), 3 SPO 2015). The following aspects are included:

- Regular participation in the seminar dates
- Preparation of a seminar paper on a partial aspect of the seminar topic according to scientific methods
- Lecture on the topic of the seminar paper.

The point scheme for the assessment is determined by the lecturer of the respective course. It will be announced at the beginning of the course.

Prerequisites

None.

Recommendation

See seminar description in the course catalogue of the KIT (https://campus.kit.edu/)

Annotation

The listed seminar titles are placeholders. Currently offered seminars of each semester will be published on the websites of the institutes and in the course catalogue of the KIT. In general, the current seminar topics of each semester are already announced at the end of the previous semester. Furthermore for some seminars there is an application required.

The available places are listed on the internet: https://portal.wiwi.kit.edu.

Hospital Management

2550493, SS 2019, 2 SWS, Language: German, Open in study portal

Block (B)

Description

The seminar 'Hospital Management' presents internal organization structures, work conditions and work environments at the example of hospitals und relates this to common and expected conditions of other service industries.

Covered topics include normative environment, intra-organizational structure, personnel management, quality, external networking and market appearance. The course consists of two full-day sessions.

Seminar Management Accounting

2579904, SS 2019, 2 SWS, Language: English, Open in study portal

Seminar (S)

Notes

see Module Handbook

Learning Content

The course will be a mix of lectures, discussions, and student presentations. Students will write a paper in small groups, and present this in the final week. You are to a large extent free to select your own topic. The seminar course is concentrated in four meetings that are spread throughout the semester.

Meeting 1: Introductory lecture. You need to conduct a first literature search and at the end of the first week you should identify (provisionally) the topic for your paper.

Meeting 2 and 3: The purpose of the second week is to define the topics and research questions in much more detail. Different types of papers may be selected: literature review, research paper, descriptive case study, or teaching case. Students will present their ideas and all participants should ask questions, help each other focus, offer ideas, etc.

Meeting 4: In the third week we are going to present and discuss the final papers.

Annotation

Maximum of 24 students.

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Literature

Will be announced in the course.

Seminar in Data Science for Finance

2500029, WS 19/20, 2 SWS, Language: English, Open in study portal

Description

The aim of this seminar is to master real-world challenges of computational risk and asset management. The CRAM team offers a wide range of topics across different asset classes and different stages of the investment process.

Learning Content

Students will work on a quantitative problem related to risk and asset management. This seminar is ideally suited for students who want to deepen and apply their statistics / programming skills and knowledge about financial markets. Industry-relevant problems will be solved with financial data and modern statistical tools in close collaboration with a supervisor. Topics which students solved in the past include the option-based pricing of dividends during the Euro crisis, the estimation of risk neutral moments with high-frequent data and the application of a particle filter to estimate stochastic volatility. The current topics will be presented during the first meeting.

Data Science in Service Management

Notes

wird auf deutsch und englisch gehalten

Masterseminar in Data Science and Machine Learning

2540510, WS 19/20, 2 SWS, Language: German, Open in study portal

Workload

The total workload for this course is approximately 90 hours (3 ECTS). Depending on the realization of the work, the times may vary. The main focus is always on working independently.

Digital Service Design Seminar

2540559, WS 19/20, 3 SWS, Open in study portal

Seminar (S)

(S)

Seminar (S)

Seminar (S)

Seminar (S)

Description

Contemporary trends of every increasing digitalization in businesses lead to new challenges and fusion of technologies blurring the lines between the digital, physical and biological spheres, thereby calling for a new approaches for corporate management. Recently, physician Michio Kaku put it like the following: "The destiny of computers – like other mass technologies like electricity, paper, and running water- is to become invisible, that is, to disappear into the fabric of our lives, to be everywhere and nowhere, silently and seamlessly carrying out our wishes." Michio Kaku (2016)

In the Practical Seminar Digital Service Design students address a real-world challenge in businesses and apply digital service design practices and tools. Furthermore, during the time of the seminar the students prototypical implement a running digital service.

Real-world challenges will vary over time. This time, the challenges are from the domain of **Future Corporate Management**. The practical seminar is carried out in close cooperation with SAP SE and leverages state-of-the-art digital platforms for prototyping.

Learning Content

- Foundations
- Digital Service Design Challenges in Future Corporate Management
- Basics of Digital Service Design practices and tools
- Prototyping and development Digital Services
- Delivering digital service prototypes

2572181, WS 19/20, 2 SWS, Language: German, Open in study portal

Seminar (S)

Learning Content

The seminary teaches students to gain a systematic overview of a field of literature in Marketing - an important prerequisite for a successful master thesis. Central aspects are identification of relevant literature sources, systematization of the field, working out central insights, writing comprehensively, and identification of research gaps.

Annotation

Students interested in master thesis positions at the chair of marketing should participate in the marketing seminar. For further information please contact Marketing & Sales Research Group (marketing.iism.kit.edu)

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Literature

will be announced in the seminary.

Notes

The course will be a mix of lectures, discussions, and student presentations. Students will write a paper in small groups, and present this in the final week. Topics are selectively prediscibed. The seminar course is concentrated in four meetings that are spread throughout the semester.

Meeting 1: Introductory lecture. You need to conduct a first literature search and at the end of the first week you should identify (provisionally) the topic for your paper.

Meeting 2 and 3: The purpose of the second week is to define the topics and research questions in much more detail. Different types of papers may be selected: literature review, research paper, descriptive case study, or teaching case. Students will present their ideas and all participants should ask questions, help each other focus, offer ideas, etc.

Meeting 4: In the third week we are going to present and discuss the final papers.

Learning objectives: Students

- are largely independently able to identify a distinct topic in Management Accounting,
- are capable to research the topic, analyze the information, to conceptualize and deduct fundamental principles and relationships from relatively unstructured information,
- can afterwards logically and systematically present the results in writing and as an oral presentation, following a scientific approach (structuring, terminology, sources.

Proof:

• The final grade of the course is the grade awarded to the paper.

Recommendation:

• The LV "Betriebswirtschaftslehre: Finanzwirtschaft und Rechnungswesen" (2600026) must have been completed before starting this seminar.

Workload:

• The total workload for this course is approximately 90 hours. For further information see German version.

Note:

• Maximum of 24 students.

Learning Content

The course will be a mix of lectures, discussions, and student presentations. Students will write a paper in small groups, and present this in the final week. Topics are selectively prediscibed. The seminar course is concentrated in four to five meetings that are spread throughout the semester.

Topics in Political Economics (Master)

2560552, SS 2019, 2 SWS, Language: English, Open in study portal

Description

In many companies relative reward schemes are used whereby employees earn a bonus if they perform better than their colleagues. Moreover, hierarchical structures mean that in many organizations, employees find themselves in constant competition for promotions. This is meant to provide incentives for higher performance. However, competitive remuneration schemes could also have detrimental effects such that individual workers may view their colleagues as direct competitors generating more selfish and/or less helpful behavior in the workplace. Furthermore, age, gender and culture seem to have impacts on willingness to compete. For example, in western cultures, adult men sometimes enter competition even though their performance level is way too low for success, i.e., they harm themselves by over-competitiveness. In contrast, adult females sometimes compete less than they could do successfully.

Another challenge in contest design, e.g. in sports, is that when competition takes place among workers with mixed abilities it may lead to a discouragement effect, which establishes that lower ability individuals often reduce effort competing against an individual they do not feel up to (e.g. it has been found that average golf players performed significantly worse when competing against a superstar like Tiger Woods). One solution suggested by the economic literature is to level the playing field between advantaged and disadvantaged individuals by favoring weaker individuals through bid-caps, asymmetric tie-breaking rules, or advances. In sports, asymmetric tie-breaking is already common, for instance, in the

Champions League soccer playoffs "away goals" become the decisive factor in determining the winning team in case of a tie.

Contests are not only a well-established mechanism for incentivizing workers but also for encouraging innovation and advancing R&D. Elements of research and innovation contests can be found in the procurement of various goods and services. For instance, the construction of new buildings, proposals in a venture capital firm or TV shows for entertainment companies all flow through a similar innovation process that involves the solicitation of bids from multiple potential suppliers and the preparation of a pilot or a proposal. In other cases, e.g., in lobbying contests, it is often discussed whether investments are beneficial or not. Some authors have argued that investments into lobbying should be capped in order to soften competition among asymmetrically strong interest groups (e.g. the lobbying industry versus consumers' interest groups). Of course, then the question arises whether such caps achieve the respective design goal or not.

In this seminar, we discuss questions like: How can we design workplaces and labor contracts to increase motivation and productivity? How can contests be used to foster innovation? Which role should social preferences play and how could they inspire specific contest designs? How should sport contests be engineered depending on the respective goals? How should we design lobbying contests?

Also related topics are very welcome!

Notes

Participation will be limited to 12 students.

Annotation

Morals and Social Behavior (Master)

2560554, SS 2019, 2 SWS, Language: English, Open in study portal

Seminar (S)

Seminar (S)

Seminar (S)

Description

For a long time, economists studied given markets and mechanisms to predict outcomes, future developments or generally the participants' behavior. In contrast, Market Design uses theory, empirical and experimental work to design markets which incentivize their participants in a way that leads to a "desirable" outcome. In this, the designer can have different objectives, for example: Maximizing efficiency, welfare or minimizing negative externalities.

Prominent applications of Market Design include, quite topical, Germany's auction of 5G mobile licenses and matching markets, where there are two large populations that need to be matched to one another (think of hospitals and interns, students and dorm rooms or kidney donors and receivers). In this seminar, we think about ways to either design new markets or how we could alter existing ones in a socially beneficial way. Alternatively, research ideas could focus on finding failures or shortcomings of ineffectively designed markets.

Notes

Participation will be limited to 12 students.

Annotation

Competence Certificate

Alternative exam assessment (§ 4(2), 3 SPO 2015). The following aspects are included:

- Regular participation in the seminar dates
- Preparation of a seminar paper on a partial aspect of the seminar topic according to scientific methods
- Lecture on the topic of the seminar paper.

The point scheme for the assessment is determined by the lecturer of the respective course. It will be announced at the beginning of the course.

Prerequisites

None.

Recommendation

See seminar description in the course catalogue of the KIT (https://campus.kit.edu/)

Annotation

Placeholder for seminars offered by the Institute AIFB.

The listed seminar titles are placeholders. Currently offered seminars of each semester will be published on the websites of the institutes and in the course catalogue of the KIT. In general, the current seminar topics of each semester are already announced at the end of the previous semester. Furthermore for some seminars there is an application required.

The available places are listed on the internet: https://portal.wiwi.kit.edu.

Below you will find excerpts from events related to this course:

Knowledge Discovery and Data Mining

2512300, SS 2019, 3 SWS, Language: English, Open in study portal

Description

The seminar includes different methods of machine learning and data mining. Participants of the seminar should have basic knowledge of machine learning and programming skills.

Notes

The exact dates and information for registration will be announced at the event page.

Learning Content

Domains of interest include, but are not limited to:

- Medicine
- Social Media
- Finance Market

Literature

Detailed references are indicated together with the respective subjects. For general background information look up the following textbooks:

- Mitchell, T.; Machine Learning
- McGraw Hill, Cook, D.J. and Holder, L.B. (Editors) Mining Graph Data, ISBN:0-471-73190-0
- Wiley, Manning, C. and Schütze, H.; Foundations of Statistical NLP, MIT Press, 1999.

Data Science & Real-time Big Data Analytics

2513306, SS 2019, 2 SWS, Language: German/English, Open in study portal

Description

Event processing and real-time data are everywhere: financial market data, sensors, business intelligence, social media analytics, logistics. Many applications collect large volumes of data in real time and are increasingly faced with the challenge of being able to process them quickly and react promptly. The challenges of this real-time processing are currently also receiving a great deal of attention under the term "Big Data". The complex processing of real-time data requires both knowledge of methods for data analysis (data science) and their processing (real-time analytics). Seminar papers are offered on both of these areas as well as on interface topics, the input of own ideas is explicitly desired.

Seminar Service Science, Management & Engineering

Seminar (S)

2595470, SS 2019, 2 SWS, Language: German, Open in study portal

Learning Content

Each Semester, the seminar will cover topics from a different selected subfield of Service Science, Management & Engineering. Topics include service innovation, service economics, service computing, transformation and coordination of service value networks as well as collaboration for knowledge intensive services.

See the KSRI website for more information about this seminar: www.ksri.kit.edu

Seminar (S)

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Literature

The student will receive the necessary literature for his research topic.

Security and Privacy Awareness

2400125, WS 19/20, 2 SWS, Open in study portal

Notes

Within the framework of this interdisciplinary seminar, the topics security awareness and privacy awareness are to be considered from different perspectives. It deals with legal, information technology, psychological, social as well as philosophical aspects. Dates:

- Kick-Off (with topic placing): 25.10.19, 11:30-13:00 Building 5.20 Room 1C-01
- Final version: 10.03.20
- Presentation: 25.03.20

Topics will be assigned at the Kick-Off.

Further information about the concrete topics will follow shortly.

ATTENTION: The seminar is only for MASTER students!

Linked Data and the Semantic Web

2512301, WS 19/20, 3 SWS, Language: German/English, Open in study portal

Notes

Linked Data is a way of publishing data on the web in a machine-understandable fashion. The aim of this practical seminar is to build applications and devise algorithms that consume, provide, or analyse Linked Data.

The Linked Data principles are a set of practices for data publishing on the web. Linked Data builds on the web architecture and uses HTTP for data access, and RDF for describing data, thus aiming towards web-scale data integration. There is a vast amount of data available published according to those principles: recently, 4.5 billion facts have been counted with information about various domains, including music, movies, geography, natural sciences. Linked Data is also used to make web-pages machine-understandable, corresponding annotations are considered by the big search engine providers. On a smaller scale, devices on the Internet of Things can also be accessed using Linked Data which makes the unified processing of device data and data from the web easy.

In this practical seminar, students will build prototypical applications and devise algorithms that consume, provide, or analyse Linked Data. Those applications and algorithms can also extend existing applications ranging from databases to mobile apps.

For the seminar, programming skills or knowledge about web development tools/technologies are highly recommended. Basic knowledge of RDF and SPARQL are also recommended, but may be acquired during the seminar. Students will work in groups. Seminar meetings will take place as 'Block-Seminar'.

Topics of interest include, but are not limited to:

- Travel Security
- Geo data
- Linked News
- Social Media

The exact dates and information for registration will be announced at the event page.

Real-World Challenges in Data Science and Analytics

Notes

In the seminar, various Real-World Challenges in Data Science and Analytics will be worked on.

During this seminar, groups of students work on a case challenge with data provided. Here, the typical process of a data science project is depicted: integration of data, analysis of these, modeling of the decisions and visualization of the results.

During the seminar, solution concepts are worked out, implemented as a software solution and presented in an intermediate and final presentation. The seminar "Real-World Challenges in Data Science and Analytics" is aimed at students in master's programs.

The exact dates and information for registration will be announced at the course page.

Seminar Service Science, Management & Engineering

2595470, WS 19/20, 3 SWS, Language: German, Open in study portal

Seminar (S)

Notes

Each Semester, the seminar will cover topics from a different selected subfield of Service Science, Management & Engineering. Topics include service innovation, service economics, service computing, transformation and coordination of service value networks as well as collaboration for knowledge intensive services.

See the KSRI website for more information about this seminar: www.ksri.kit.edu

The assessment of this course is according to §4(2), 3 SPO in form of an examination of the written seminar thesis (15-20 pages), a presentation and active participation in class.

The final mark is based on the examination of the written seminar thesis but can be upgraded or downgraded according to the quality of the presentation.

Learning objectives:

The student

- illustrates and evaluates classic and current research questions in service science, management and engineering,
- applies models and techniques in service science, also with regard to their applicability in practical cases,
- successfully gets in touch with scientific working by an in-depth working on a special scientific topic which makes the student familiar with scientific literature research and argumentation methods,
- acquires good rhetorical and presentation skills.

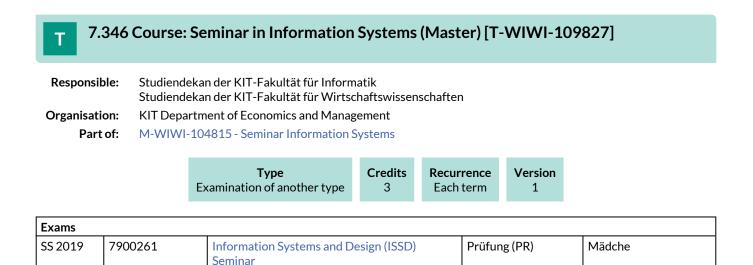

As a further aspect of scientific work, especially for Master students the emphasis is put on a critical discussion of the seminar topic.

Recommendations:

Lecture eServices [2595466] is recommended.

Workload:

The total workload for this course is approximately 90 hours. For further information see German version.

Competence Certificate

Alternative exam assessment (§ 4(2), 3 SPO 2015). The following aspects are included:

- Regular participation in the seminar dates
- Preparation of a seminar paper on a partial aspect of the seminar topic according to scientific methods
- Lecture on the topic of the seminar paper.

The point scheme for the assessment is determined by the lecturer of the respective course. It will be announced at the beginning of the course.

Prerequisites

None.

Recommendation

Service Analytics A

2595501, SS 2019, 2 SWS, Language: German, Open in study portal

Learning Content

Today's service-oriented companies are starting to optimize the way services are planned, operated, and personalized by analyzing vast amounts of data from customers, IT-systems, or sensors. As the statistical learning and business optimization world continues to progress, skills and expertise in advanced data analytics and data and fact-based optimization become vital for companies to be competitive. In this lecture, relevant methods and tools will be considered as a package, with a strong focus on their inter-relations. Students will learn to analyze and structure large amounts of potentially incomplete and unreliable data, to apply multivariate statistics to filter data and to extract key features, to predict future behavior and system dynamics, and finally to formulate data and fact-based service planning and decision models.

More specifically, the lessons of this lecture will include:

- Co-Creation of Value Across Enterprises
- Instrumentation, Measurement, Monitoring of Service Systems
- Descriptive, predictive, and prescriptive Analytics
- Usage Characteristics and Customer Dynamics
- Big Data, Dimensionality Reduction, and Real-Time Analytics
- System Models and What-If-Analysis
- Robust Mechanisms for Service Management
- Industry Applications of Service Analytics

Tutorials

Students will conduct lecture accompanying, guided exercises throughout the semester.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Exams				
SS 2019	7900217	Service Design Thinking	Prüfung (PR)	Satzger

Competence Certificate

Alternative exam assessment.

Prerequisites

The course is compulsory and must be examined.

Recommendation

This course is held in English – proficiency in writing and communication is required.

Our past students recommend to take this course at the beginning of the masters program.

Annotation

Due to practical project work as a component of the program, access is limited.

The module (as well as the module component) spans two semesters. It starts in September every year and runs until end of June in the subsequent year. Entering the program is only possible at its beginning - after prior application in May/June.

For more information on the application process and the program itself are provided in the module component description and the program's website (http://sdt-karlsruhe.de).

Furthermore, the KSRI conducts an information event for applicants every year in May.

This module is part of the KSRI Teaching Program "Digital Service Systems". For more information see the KSRI Teaching website: www.ksri.kit.edu/teaching.

Service Innovation

2595468, SS 2019, 2 SWS, Language: English, Open in study portal

Description

While innovation in manufacturing or agriculture can leverage a considerable body of research, experience and best practice, innovation in services has not reached the same level of maturity. In practice - while many organizations have a well-understood process for innovating in the product business - innovating in services is often still a fuzzy and complex undertaking.

In this lecture we will

- discuss the state of research
- compare product and service innovation
- understand how innovation diffusion works
- examine case studies of service innovation
- compare open vs. closed innovation
- learn how to leverage user communities to drive innovation and
- understand obstacles, and enablers and how to manage, incentivize and foster service innovation

Learning Content

While innovation in manufacturing can leverage a considerable body of research, experience and best practice, innovation in services has not reached the same level of maturity. In practice, while many organizations have a well-understood process for innovating in the product business, innovating in services is often still a fuzzy and complex undertaking. In this lecture we will discuss the state of research, compare product and service innovation and understand how innovation diffusion works. We examine case studies on service innovation, compare open vs. closed innovation and learn how to apply different innovation tools, methods and strategies (e.g. service design thinking as a human-centered approach to innovation or technology and strategic foresight, as methods supporting the generation of assumptions on the impact of technology).

Annotation

The credits have been changed from 5 to 4,5.

Signals and Codes

24137, WS 19/20, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

The course covers essentially the question of how the exchange of information can be realized reliably and efficiently. The lecture gives an overview of how to secure signals against random errors. In signal theory, source coding and the Theorem of Shannon will be covered. In the coding theory part, bounds for codes (Hamming, Gilbert-Varshamov, Singleton) are presented. Coding and decoding for classical algebraic codes (linear, cyclic, Reed Solomon-, Goppa- und Reed Muller-codes) will be presented as well as concatanated codes.

7.357 Course: Simulation Game in Energy Economics [T-WIWI-108016]

Recommendation

Visiting the course "Introduction to Energy Economics"

Annotation

See German version.

Below you will find excerpts from events related to this course:

Simulation Game in Energy Economics

2581025, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture / Practice (VÜ)

Learning Content

- Introduction
- Agents and market places in the electricity industry
- Selected planning tasks of energy service companies
- Methods of modelling in the energy sector
- Agent-based simulation: The PowerACE model
- Simulation game: Simulation in energy economics (electricity and emission trading, investment decisions)

The lecture is structured in a theoretical and a practical part. In the theoretical part, the students are taught the basics to carry out simulations themselves in the practical part which comprises amongst others the simulation of the power exchange. The participants of the simulation game take a role as a power trader in the power market. Based on various sources of information (e.g. prognosis of power prices, available power plants, fuel prices), they can launch bids in the power exchange.

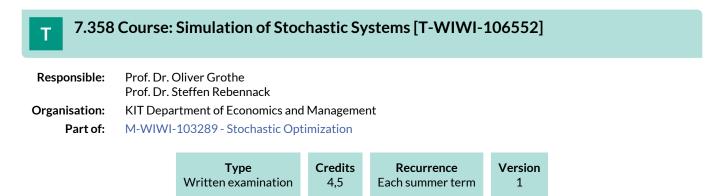

Workload

The total workload for this course is approximately 90 hours. For further information see German version.

Literature

Elective literature:

Möst, D. und Genoese, M. (2009): Market power in the German wholesale electricity market. The Journal of Energy Markets (47–74). Volume 2/Number 2, Summer 2009

Competence Certificate

The assessment consists of a written exam (60 minutes) according to Section 4(2), 1 of the examination regulation. The exam takes place in every the semester.

Prerequisites

None.

Sociotechnical Information Systems Development

2512400, WS 19/20, 3 SWS, Language: German/English, Open in study portal

Practical course (P)

Notes

The aim of this course is to provide a practical introduction into developing socio-technical information systems, such as web platforms, mobile apps, or desktop applications. Course participants will create (individually or in groups) software solutions for specific problems from various practical domains. The course tasks comprise requirements assessment, system design, and software implementation. Furthermore, course participants will gain insights into software quality assurance methods and software documentation.

Learning objectives:

- Independent and self-organized realization of a software development project
- Evaluation and selection of suitable development tools and methods
- Application of modern software development methods
- Planning and execution of different development tasks: requirements assessment, system design, implementation, and quality assurance
- Project documentation
- Presentation of project results in an comprehensible and structured form

Learning Content

Geography, trade and development Geography and economic theory Core models of economic geography and empirical evidence Agglomeration, home market effect, and spatial wages Applications and extensions

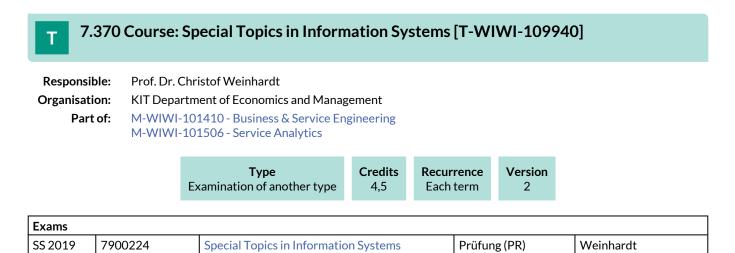

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Lecture (V)

Literature

Steven Brakman, Harry Garretsen, Charles van Marrewijk (2009), The New Introduction to Geographical Economics Further literature recommendations will be announced in the course of the lecture.

Competence Certificate

The assessment of this course is according to §4(2), 3 SPO in form of a written documentation, a presentation of the outcome of the conducted practical components and an active participation in class.

Please take into account that, beside the written documentation, also a practical component (such as a survey or an implementation of an application) is part of the course. Please examine the course description for the particular tasks.

The final mark is based on the graded and weighted attainments (such as the written documentation, presentation, practical work and an active participation in class).

Prerequisites

see below

Recommendation

None

Annotation

All the practical seminars offered at the chair of Prof. Dr. Weinhardt can be chosen in the Special Topics in Information Systems course. The current topics of the practical seminars are available at the following homepage: www.iism.kit.edu/im/lehre

The Special Topics Information Systems is equivalent to the practical seminar, as it was only offered for the major in "Information Management and Engineering" so far. With this course students majoring in "Industrial Engineering and Management" and "Economics Engineering" also have the chance of getting practical experience and enhance their scientific capabilities.

The Special Topics Information Systems can be chosen instead of a regular lecture (see module description). Please take into account, that this course can only be accounted once per module.

Stochastic Calculus and Finance

2521331, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Description

The course will provide rigorous yet focused training in stochastic calculus and finance. The program will cover modern approaches in stochastic calculus and mathematical finance. Topics to be covered:

- 1. Stochastic Calculus. Stochastic Processes, Brownian Motion and Martingales, Stopping Times, Local martingales, Doob-Meyer Decomposition, Quadratic Variation, Stochastic Integration, Ito Formula, Girsanov Theorem, Jump-diffusion Processes. Stable and tempered stable processes. Levy processes.
- 2. Mathematical Finance: Pricing Models. The Black-Scholes Model, State prices and Equivalent Martingale Measure, Complete Markets and Redundant Security Prices, Arbitrage Pricing with Dividends, Term-Structure Models (One Factor Models, Cox-Ingersoll-Ross Model, Affine Models), Term-Structure Derivatives and Hedging, Mortgage-Backed Securities, Derivative Assets (Forward Prices, Future Contracts, American Options, Look-back Options), Option pricing with tempered stable and Levy-Processes and volatility clustering, Optimal Portfolio and Consumption Choice (Stochastic Control and Merton continuous time optimization problem), Equilibrium models, Consumption-Based CAPM, Numerical Methods.

Learning Content

The course will provide rigorous yet focused training in stochastic calculus and finance. The program will cover modern approaches in stochastic calculus and mathematical finance. Topics to be covered:

- 1. Stochastic Calculus. Stochastic Processes, Brownian Motion and Martingales, Stopping Times, Local martingales, Doob-Meyer Decomposition, Quadratic Variation, Stochastic Integration, Ito Formula, Girsanov Theorem, Jump-diffusion Processes. Stable and tempered stable processes. Levy processes.
- 2. Mathematical Finance: Pricing Models. Symmetric encryption

24629, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Learning Content

This lecture provides the theoretical and practical aspects of symmetric cryptography. The most important topics are:

- Historical ciphers, if they are useful for assessing the security of current ciphers,
- block ciphers and the most important types of attacks (differential and linear cryptanalysis, meet-in-the-middle attacks, slide attacks),
- hash functions the focus is on attacks and techniques to forge meaningful messages through the use of "meaningless collisions",
- security definitions for symmetric encryption schemes and their modes of operation.

7.383 Course: Tactical and Operational Supply Chain Management [T-WIWI-102714]

Competence Certificate

The assessment consists of a written exam (60 minutes) according to Section 4(2), 1 of the examination regulation.

The exam takes place in every the semester.

Prerequisite for admission to examination is the succesful completion of the online assessments.

Prerequisites

Prerequisite for admission to examination is the succesful completion of the online assessments.

Recommendation

None

Annotation

The lecture is held in every summer term. The planned lectures and courses for the next three years are announced online.

Below you will find excerpts from events related to this course:

Taktisches und operatives SCM

2550486, SS 2019, 2 SWS, Language: German, Open in study portal

Lecture (V)

Description

Since the classical work 'Theory of the Location of Industries' of Weber from 1909, the determination of an optimal location of a new facility with respect to existing customers is strongly connected to strategical logistics planning. Strategic decisions concerning the location of facilities as production plants, distribution centers or warehouses are of high importance for the rentability of supply chains. Thoroughly carried out, location planning allows an efficient flow of materials and leads to lower costs and increased customer service.

Subject of the course is an introduction to the most important terms and definitions in location planning as well as the presentation of basic quantitative location planning models. Furthermore, specialized location planning models for Supply Chain Management will be addressed as they are part in many commercial SCM tools for strategic planning tasks.

Learning Content

The lecture covers basic quantitative methods in location planning in the context of strategic Supply Chain Planning. Besides the discussion of several criteria for the evaluation of the locations of facilities, the students are acquainted with classical location planning models (planar models, network models and discrete models) and advanced location planning models designed for Supply Chain Management (single-period and multi-period models). The exercises accompanying the lecture offer the possibility to apply the considered models to practical problems.

Annotation

The lecture is held in every summer term. The planned lectures and courses for the next three years are announced online.

Technologies for Innovation Management

2545106, WS 19/20, 2 SWS, Language: German, Open in study portal

Notes

The seminar "Technologies for Innovation Management" will focus on the early phase or fuzzy front end in innovation management. Technologies can be of great importance here, above all in the supply of information. In globally distributed R & D organizations, it is necessary to collect as much information as possible on new technological developments in the early phase of the innovation process. Information and communication technologies can be supported.

Exams					
SS 2019	7900276	Telecommunication and Internet Economics Prüfung (PR) Mitusch		Mitusch	

Competence Certificate

Result of success is made by a 60 minutes written examination during the semester break (according to §4(2), 1 ERSC). Examination is offered every semester and can be retried at any regular examination date.

Prerequisites

None

Recommendation

Basic knowledge and skills of microeconomics from undergraduate studies (bachelor's degree) are expected.

Particularly helpful but not necessary: Industrial Economics. Prior attendance of the lecture "Competition in Networks" [26240] or "Industrial Organisation" is helpful in any case but not considered a formal precondition. The english taught course "Communications Economics" is complementary and recommendet for anyone interested in the sector.

Below you will find excerpts from events related to this course:

Telecommunication and Internet Economics

2561232, WS 19/20, 2 SWS, Language: German, Open in study portal

Learning Content

Among the network sectors the telecommunication and internet sector is the most dynamic one and the one with and highest variety of phenomena. Problems of natural monopoly still exist in some parts. But there is also competition, not only at the service level but also at the infrastructural level. Both levels are characterized by (vertical) quality differentiations and by high technology dynamics. What should the regulation of this sector look like? How should the mutual network access prices of two telecommunication providers be regulated and how can regulators set incentives for infrastructure investments?

The internet is a free market par excellence, because everybody can open internet businesses without high entry costs. Why then can a company like ebay dominate the market for internet-auction platforms so strongly? The causes of market concentration on the internet will be analyzed. So will be the economic implications of the Next Generations Networks.

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Literature

J.-J. Laffont, J. Tirole (2000): Competition in Telecommunications, MIT Press.

Testing Digital Systems I

24637, SS 2019, 2 SWS, Language: English, Open in study portal

Lecture (V)

Learning Content

Testing of digital circuits plays a critical role during the design and manufacturing cycles. It also ensure the quality of parts shipped to the customers. Test generation and design for testability are integral parts of automated design flow of all electronics products. The objective of this course is to provide the foundations for developing test methods for digital systems and provides the techniques necessary to practice design for testability.

This course encompasses the theoretical and practical aspects of digital systems testing and the design of easily testable circuits. Topics include Introduction to Testing (testing definition, types of test, automatic test equipments, test economics, and quality models), Failures and Errors (definitions, failure modes, failure mechanisms, reliability defects), Faults (fault models, stuck-at faults, bridging faults, timing faults, transistor-level faults, functional-level faults, effectiveness of different fault models based on real data), Logic and Fault Simulation (fault equivalence and fault collapsing, true-value simulation, fault simulation algorithms, statistical methods), Test Generation for Combinational Circuits (algebraic methods, path-tracing (D-alg, PODEM, FAN), testability metrics, test file compression), Digital Design-For-Testability and Internal Scan Design (ad-hoc methods, scan architectures, scanbased test methodology).

Events					
WS 19/20	2561503	Theory of endogenous growth	2 SWS	Lecture (V)	Ott
WS 19/20	2561504		1 SWS	Practice (Ü)	Ott, Eraydin
Exams					
SS 2019	7900105	Theory of Endogenous Growth		Prüfung (PR)	Ott

Competence Certificate

The assessment consists of a written exam (60 min) according to Section 4(2), 1 of the examination regulation. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Students will be given the opportunity of writing and presenting a short paper during the lecture time to achieve a bonus on the exam grade. If the mandatory credit point exam is passed, the awarded bonus points will be added to the regular exam points. A deterioration is not possible by definition, and a grade does not necessarily improve, but is very likely to (not every additional point improves the total number of points, since a grade can not become better than 1). The voluntary elaboration of such a paper can not countervail a fail in the exam.

Prerequisites

None

Recommendation

Basic knowledge of micro- and macroeconomics is assumed, as taught in the courses Economics I [2600012], and Economics II [2600014]. In addition, an interest in quantitative-mathematical modeling is required.

Annotation

Due to the research semester of Prof. Dr. Ingrid Ott, the course is not offered in the winter term 2018/19.

Below you will find excerpts from events related to this course:

Theory of endogenous growth

2561503, WS 19/20, 2 SWS, Language: German, Open in study portal

Learning Content

- Basic models of endogenous growth
- Human capital and economic growth
- Modelling of technological progress
- Diversity Models
- Schumpeterian growth
- Directional technological progress
- Diffusion of technologies

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Competence Certificate

The assessment is made by a 60 minutes written examination during the semester break (according to §4(2), 1 ERSC). Examination is offered every semester and can be retried at any regular examination date.

Below you will find excerpts from events related to this course:

Transport Economics

2560230, SS 2019, SWS, Language: German, Open in study portal

Learning Content

The course shall provide an overview of transport economics. It will be demonstrated, using new microeconomic models, which impacts regulation and pricing in transport have on the economic actions of individuals and logisticans and which benefits and costs apply. The following topics will be discussed:

- demand and supply in transport
- empirical analysis of transport demand
- assessment of transport infrastructure projects
- external effects in transport
- transport policy
- cost structures of transport infrastructure
- Project evaluation from the perspective of the public sector

Workload

The total workload for this course is approximately 135.0 hours. For further information see German version.

Lecture (V)

Literature

Will be announced in the lecture.

(for literature to prepare the lecture - see additional literature)

Valuation

2530212, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Description

Firms prosper when they create value for their shareholders and stakeholders. This is achieved by investing in projects that yield higher returns than their according cost of capital. Students are told the basic tools for firm and project valuation as well as ways to implement these tools in order to enhance a firm's value and improve its investment decisions. Among other things, the course will deal with the valuation of firms and individual projects using discounted cash flow and relative valuation approaches and the valuation of flexibility deploying real options.

Learning Content

Topics:

- Projections of cash flows
- Estimation of the cost of capital
- Valuation of the firm
- Mergers and acquisitions
- Real options

Wearable Robotic Technologies

2400062, SS 2019, 2 SWS, Language: German/English, Open in study portal

Lecture (V)

Learning Content

The lecture starts with an overview of wearable robot technologies (exoskeletons, prostheses and ortheses) and its potentials, followed by the basics of wearable robotics. In addition to different approaches to the design of wearable robots and their related actuator and sensor technology, the lecture focuses on modeling the neuromusculoskeletal system of the human body and the physical and cognitive human-robot interaction for tightly coupled hybrid human-robot systems. Examples of current research and various applications of lower, upper and full body exoskeletons as well as prostheses are presented.

Web Science 2511312, WS 19/20, 2 SWS, Language: English, Open in study portal

Lecture (V)

Notes

The lecture provides insights into the analysis of social networks and the used metrics. Thereby, in particular, web phenomena and the available technologies are considered.

Web Science is the emergent study of the people and technologies, applications, processes and practices that shape and are shaped by the World Wide Web. Web Science aims to draw together theories, methods and findings from across academic disciplines, and to collaborate with industry, business, government and civil society, to develop our knowledge and understanding of the Web: the largest socio-technical infrastructure in human history.

The lecture provides an introduction to basic concepts of Web Science. Essential theoretical foundations, phenomena and approaches are presented and explained.

This course aims to provide students with a basic knowledge and understanding about the structure and analysis of selected web phenomena and technologies. Topics include the small world problem, network theory, social network analysis, graph search and technologies/standards/architectures.

Learning objectives:

The students

- look critically into current research topics in the field of Web Science and learns in particular about the topics small-worldproblem, network theory, social network analysis, bibliometrics, as well as link analysis and search.
- apply interdisciplinary thinking.
- train the application of technological approaches to social science problems.

Workload:

- The total workload for this course is approximately 135 hours
- Time of presentness: 45 hours
- Time of preperation and postprocessing: 60 hours
- Exam and exam preperation: 30 hours

Exercises to Web Science

2511313, WS 19/20, 1 SWS, Language: English, Open in study portal

Practice (Ü)

Notes

The exercises are related to the lecture Web Science.

Multiple exercises are held that capture the topics, held in the lecture Web Scienceand discuss them in detail. Thereby, practical examples are given to the students in order to transfer theoretical aspects into practical implementation.

This course aims to provide students with a basic knowledge and understanding about the structure and analysis of selected web phenomena and technologies. Topics include the small world problem, network theory, social network analysis, graph search and technologies/standards/architectures.

Learning objectives:

The students

- look critically into current research topics in the field of Web Science and learns in particular about the topics small-worldproblem, network theory, social network analysis, bibliometrics, as well as link analysis and search.
- apply interdisciplinary thinking.
- train the application of technological approaches to social science problems.

Competence Certificate

In this course, real conflict situations are simulated and analyzed using various methods from business wargaming. Details on the design of the performance review will be announced during the lecture.

Prerequisites

None

Recommendation

Basic knowledge as conveyed in the bachelor module "Strategy and Organization" is recommended.

Annotation

This course is admission restricted. If you were already admitted to another course in the module "Advanced Topics in Strategy and Management" the participation at this course will be guaranteed.

The course is planned to be held for the first time in the summer term 2018.

Below you will find excerpts from events related to this course:
