

# Double Degree Program

Industrial Engineering and Management  
KIT & Grenoble INP Génie Industriel

## Four Questions to Laura, student Double Degree Program

### Why are you studying the double degree program?

I'm studying for a double degree because living in Europe, I find it extremely formative and enriching to have two cultural and academic contributions from two different countries. Secondly, this double degree allows me to really immerse myself in the culture of the host country, which would not have been the case during a simple Erasmus exchange (even if it's already very good!).

### How does studying in Germany differ from studying in France?

The studies differ mainly because in France we have so-called "engineering schools" which are the equivalent of the "Hochschule" in Germany in terms of operation but have the reputation of a "Universität". Consequently, the main differences for me will have been in the form of the courses (only lectures in Germany, you can choose your own courses, you feel much freer and more responsible for your personal choices but consequently also more alone, lost...) and in the level of learning for the exams.

### Tips for Interested Students:

- If possible and if you feel like it, join an association such as ESTIEM, for example, to meet more people and, above all, to meet Germans, exchange with them and then integrate better.
- Work on the courses very regularly, don't wait 1-2 weeks before the exam to revise
- Contact us if you need help with creating the timetable, for the organisation etc.!
